 <br> <br> Co-axial Venting}

## How to Read the Venting Chart

The chart below applies to co-axial roof or wall termination.

1. The total length of the vent pipe cannot exceed 40 feet.
2. The minimum vertical height with roof termination is 6 feet.
3. Any combination of rise and run can be used as long as they are within the allowable limits shown on the chart below.
4. A maximum of $4 \times 90$ degrees elbows-or equivalent ( $2 \times 45$ degrees $=90$ degrees)—can be used. Excludes the 45 degrees take-off elbow shipped with the appliance.
5. Each 90 degrees elbow installed on the horizontal plane is equivalent to a 3 feet horizontal pipe; therefore, 3 feet must be subtracted from allowable horizontal run. (45 degrees elbow is equivalent to 18 inches horizontal pipe.)
6. All horizontal pipe runs must be graded $1 / 4$ inch per foot upwards in the direction of the exhaust flow. The final pipe length, when terminating through the wall may be graded downwards slightly to prevent water migration.
7. A restrictor adjustment is required for most installations having a vertical rise-see next section.
Note: The restrictor is shipped installed at the exhaust exit of the firebox.

Venting Chart

Example 1
V Value $=$ V1 $\left(2^{\prime}\right)+\mathrm{V} 2\left(4^{\prime}\right)+\mathrm{V} 3\left(2^{\prime}\right)=8^{\prime}$
H Value $=\mathrm{H} 1\left(0^{\prime}\right)+\mathrm{H} 2\left(3^{\prime}\right)=3^{\prime}$
Restrictor position \# 1 required
