How to Read the Venting Chart

The chart below applies to co-axial roof or wall termination.

1. Maximum 18 inches horizontal pipe section allowed with no vertical in vent system.
   45 degrees elbow ok on horizontal plane.
2. The total length of the vent pipe cannot exceed 40 feet.
3. The minimum vertical height with roof termination is 6 feet.
4. Any combination of rise and run can be used as long as they are within the allowable limits shown on the chart below.
5. A maximum of 4 x 90 degrees elbows—or equivalent (2 x 45 degrees = 90 degrees)—can be used.
6. Each 90 degrees elbow installed on the horizontal plane is equivalent to a 3 feet horizontal pipe; therefore, 3 feet must be subtracted from allowable horizontal run.
   (45 degrees elbow is equivalent to 18 inches horizontal pipe.)
7. All horizontal pipe runs must be graded 1/4 inch per foot upwards in the direction of the exhaust flow. The final pipe length, when terminating through the wall may be graded downwards slightly to prevent water migration.
8. A restrictor adjustment is required for most installations having a vertical rise—see next section.

Note: The restrictors are shipped loose with the appliance.

Example 1

V Value = V1 (3') + V2 (2') + V3 (1') = 6'
H Value = H1 (3') + H2 (2') = 5'
Restrictor position #1 required

Example 2

V Value = V1 (3') + V2 (2') + V3 (1') = 6'
H Value = H1 (3') + H2 (2') = 5'
Restrictor position #2 required
New Construction Applications - Co-axial Venting

Appliance supplied with 4 x 6-5/8” top outlet, field convertible to rear outlet

Max. 18” pipe length with no vertical rise - (use of 45° elbow ok)

Use vent terminal guard with a vent terminal located at less than 7’ (2.13 m) above grade

3” min. above top of horizontal pipe

1” min. around bottom & sides of horizontal pipe

1” min. all around vertical pipe

4 x 90° ELBOWS MAXIMUM (or equivalent)
