Co-axial Venting

How to Read the Venting Chart
The chart below applies to co-axial roof or wall termination.

1. The total length of the vent pipe cannot exceed 40 feet.
2. The minimum vertical height with roof termination is 6 feet.
3. Any combination of rise and run can be used as long as they are within the allowable limits shown on the chart below.
4. A maximum of 4 x 90 degrees elbows—or equivalent (2 x 45 degrees = 90 degrees)—can be used. Excludes the 45 degrees take-off elbow shipped with the appliance.
5. Each 90 degrees elbow installed on the horizontal plane is equivalent to a 3 feet horizontal pipe; therefore, 3 feet must be subtracted from allowable horizontal run. (45 degrees elbow is equivalent to 18 inches horizontal pipe.)
6. All horizontal pipe runs must be graded 1/4 inch per foot upwards in the direction of the exhaust flow. The final pipe length, when terminating through the wall may be graded downwards slightly to prevent water migration.

Note: The restrictor is shipped installed at the exhaust exit of the firebox.
Co-axial Venting

4 x 90° ELBOWS MAXIMUM
(or equivalent)

3” min. above top of horizontal pipe

1” min. all around vertical pipe

1” min. around bottom & sides of horizontal pipe

Max. 12” pipe if no vertical rise is used

45° elbow take-off supplied with unit
