This appliance may be installed in an aftermarket permanently located, manufactured (mobile) home where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

This appliance is a domestic room-heating appliance. It must not be used for any other purposes such as drying clothes, etc.

This appliance is suitable for installation in a bedroom or bed sitting room.

Massachusetts: The piping and final gas connection must be performed by a licensed plumber or gas fitter in the State of Massachusetts. Also, see Carbon Monoxide Detector requirements on page 60.

© Copyright Miles Industries Ltd., 2018. All rights reserved.
Read and understand all instructions carefully before starting the installation. Failure to follow these installation instructions may result in possible fire hazard and will void the warranty.

Prior to the first firing of the fireplace, read the Owner’s information section of this manual.

Do not use this appliance if any part has been under water. Immediately, call a qualified service technician to inspect the unit and to replace any part of the control system and any gas control that has been under water.

This unit is not for use with solid fuel.

Installation and repair should be performed by a qualified service person. The appliance and venting system should be inspected before initial use and at least annually by a professional service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding, etc. It is imperative that the unit’s control compartment, burner, and circulating air passageways be kept clean to provide for adequate combustion and ventilation air.

Always keep the appliance clear and free from combustible materials, gasoline, and other flammable vapors and liquids.

Never obstruct the flow of combustion and ventilation air. Keep the front of the appliance clear of all obstacles and materials for servicing and proper operation.

This unit must be used with a vent system as described in this installation manual. No other vent system or components may be used.

This gas fireplace and vent assembly must be vented directly to the outside and must never be attached to a chimney serving a separate solid fuel burning appliance. Each gas appliance must use a separate vent system. Common vent systems are prohibited.

Inspect the external vent cap on a regular basis to make sure that no debris, plants, trees, shrubs are interfering with the air flow.

Turn off the gas before servicing this appliance. It is recommended that a qualified service technician perform an appliance check-up at the beginning of each heating season.

Do not use this heater as a temporary source of heat during construction.

Due to the high temperature, the appliance should be located out of traffic areas and away from furniture and draperies.

Clothing or flammable material should not be placed on or near the appliance.

This appliance is a domestic room-heating appliance. It must not be used for any other purposes such as drying clothes, etc.

Do not place furniture or any other combustible household objects within 36” of the fireplace front.

Be careful not to put any decorating objects sensitive to heat to close above or around the fireplace as it gets very hot when operating.

The glass door assembly must be in place and sealed before the unit can be placed into safe operation.

Do not operate this appliance with the glass door removed, cracked, or broken. Replacement of the glass door should be performed by a licensed or qualified service person. Do not strike or slam the glass door.

The glass door assembly shall only be replaced as a complete unit, as supplied by the fireplace manufacturer. No substitute material may be used.

Do not use abrasive cleaners on the glass door assembly. Do not attempt to clean the glass door when it is hot.

If the barrier becomes damaged, the barrier shall be replaced with the manufacturer’s barrier for this appliance.

Any safety screen, guard or barrier removed for servicing the appliance, must be replaced prior to operating the appliance.

Children and adults should be alerted to the hazards of high surface temperature and should stay away to avoid burns or clothing ignition.

Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at-risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children and other at-risk individuals out of the room and away from hot surfaces.

WARNING:

This product can potentially expose you to chemicals including Benzene which are known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov
Read and carefully follow all safety warnings and operating instructions contained in your owner’s manual

Replacement manuals are available by contacting the Valor Service Department at 1-800-468-2567 or visit www.valorfireplaces.com.

FOLLOW THESE IMPORTANT CHILD SAFETY PRECAUTIONS AND RECOMMENDATIONS

Parts of your Valor Fireplace become extremely hot while in operation.

The glass viewing window temperature can exceed 500 F at full capacity.

Momentary contact with a hot glass surface can cause a severe burn, even if the fireplace is operating at reduced heating capacity.

The glass window will remain hot for an extended period of time after the fireplace has been turned off. Ensure that children are prevented from touching the fireplace during the cool down period.

Toddlers and Young Children must be closely supervised at all times when they are in the same room as the operating fireplace. They lack full awareness of danger and rely on your protection. Toddlers, in particular, do not have the motor skills and response reflexes to withdraw in the event of accidental contact with a hot surface.

A physical barrier is strongly recommended if there are young children, or at-risk individuals in the house. Install an approved after-market safety gate to keep toddlers, young children and other at-risk individuals a safe distance from the fireplace.

Keep the remote control handset out of reach of children at all times. A wall mount storage holster is provided with your remote control handset.

Ensure that the fireplace, including the pilot light, is completely turned off when children are present and close supervision and safety barriers are not available—see page 7 of this manual.

If the fireplace is not going to be used for the summer or any extended period of time, remove the batteries from the remote control handset and remote battery box. It is recommended that batteries are replaced annually in any event—see page 19.

Read and carefully follow all safety warnings and operating instructions contained in your owner’s manual

Replacement manuals are available by contacting the Valor Service Department at 1-800-468-2567 or visit www.valorfireplaces.com.

FOLLOW THESE IMPORTANT CHILD SAFETY PRECAUTIONS AND RECOMMENDATIONS

Parts of your Valor Fireplace become extremely hot while in operation.

The glass viewing window temperature can exceed 500 F at full capacity.

Momentary contact with a hot glass surface can cause a severe burn, even if the fireplace is operating at reduced heating capacity.

The glass window will remain hot for an extended period of time after the fireplace has been turned off. Ensure that children are prevented from touching the fireplace during the cool down period.

Keep the remote control handset out of reach of children at all times. A wall mount storage holster is provided with your remote control handset.

Ensure that the fireplace, including the pilot light, is completely turned off when children are present and close supervision and safety barriers are not available—see page 7 of this manual.

If the fireplace is not going to be used for the summer or any extended period of time, remove the batteries from the remote control handset and remote battery box. It is recommended that batteries are replaced annually in any event—see page 19.
This manual and particularly the preceeding and following pages contain very important information regarding the safe operation of your fireplace as well as maintenance instructions. Read carefully before operating your fireplace and pay special attention to the safety warnings.

A heating gas appliance does require safe handling. For this reason, we very strongly recommend children are not allowed to touch the fireplace or controls. **Install a screen or barrier in front of the fireplace to protect your children against severe burns.**

This appliance is designed and approved as a supplemental heater and provides the potential for most energy conservation when used while attended. The use of an alternate primary heat source is advisable.

---

**WARNING EXTERMELY HOT!!!**

- **Read the safety information on pages 3 and 4 of this manual before operating your gas heater.**
- **Some parts of your fireplace are extremely hot, particularly the glass window.**
- **Do not let children touch the glass or any parts of your fireplace even after it is turned off** as it is still hot.
- **Use the barrier screen** provided with the trim or a gate to reduce the risk of severe burns.
- **Keep the remote control handset out of reach of children.**
- **Hot wall surfaces!** The wall directly above the fireplace is very hot when the fireplace heats. It is constructed of non-combustible materials and although safe, it may reach temperatures in excess of 200° F depending on choice of trims or optional accessories. **DO NOT TOUCH!** We recommend installing the optional LDK HeatShift Duct Kit when hot walls are a concern.
- **Some materials or items, although safe, may discolor, shrink, warp, crack, peel, and so on because of the heat produced by the fireplace. Avoid placing** candles, paintings, photos, and other items sensitive to heat within 36 inches (0.9 m) around the fireplace.
- **Solid wood flooring in front of the fireplace (if allowed) may shrink during the heating season due to heat.**

---

**WARNING**

- **HeatShift Duct Kit:** Do not cover or place items in front of or on top of outlet(s)!
Thank You ... 
For purchasing a Valor by Miles Industries. Your new radiant gas heater is a technical appliance that must be installed by a qualified dealer. Each Valor fireplace is fully tested during the production process for your safety and comfort.
Your unit has been professionally installed by:
Dealer Name: ________________________________
Phone Number : ________________________________

Should you encounter an operational problem, call your dealer immediately.
Do not try to repair the unit as you may cause an injury or damage the fireplace.

Locating Fireplace & Lighting Information Card

WARNING
DO NOT ATTEMPT TO TOUCH THE DATA CARD WHILE THE FIREPLACE IS STILL HOT! Let the fireplace cool first before touching it.

The Fireplace and Lighting Information card is located at the right hand side of the fireplace opening. The card is attached under the plinth.

To access the card, remove the barrier screen, side doors and the plinth. Grab the card and pull it out. There is important information on both sides of the card.

Operating Your Fireplace for the First Time

When operating your new fireplace for the first time, some vapors may be released due to the burning of curing compounds used in the manufacture of the appliance. They may cause a slight odor and could cause the flames to be the full height of the firebox, or even slightly higher, for the first few hours of operation.
It is also possible that these vapors could set off any smoke detection alarms in the immediate vicinity.
These vapors are quite normal on new appliances. We recommend opening a window to vent the room. After a few hours use, the vapors will have disappeared and the flames will be at their normal height.

Flame Supervision Device

For your safety, this appliance is fitted with a flame supervision device which will shut-off the gas supply if, for any reason, the pilot flame goes out. This device incorporates a fixed probe, which senses the heat from the pilot flame. If the probe is cool, the device will prevent any gas flow unless manually lighting the pilot. See full lighting instructions on page 14 of this manual.

Performance of propane gas appliances may be affected by the quality of commercial gas supplied in your area.
Fireplace Control Devices
There are two ways to control your fireplace.
1. Thermostatic Remote Control can be programmed to function automatically—see pages 8–12;
2. Wall Switch turns fire on, off and controls flame height—see page 13.

How to Turn Your Fireplace ON
Press and hold button(s) until a short beep confirms the start sequence has begun; release buttons. Continuing beeps confirm the ignition is in process. When the pilot is lit, the gas flows—see Using the Remote Control section for more information.

How to Turn Your Fireplace OFF (and pilot)
Press and hold the OFF button for a second (either on the handset or the wall switch).

If the flames are on, they go down and you hear the valve motor wind down. You hear a clunk and a beep indicating that the valve has received the signal from the remote control.

In the unlikely event that you cannot turn off your fireplace with the remote control handset, use the wall switch; if the wall switch malfunctions and will not turn off the fireplace, wait 6 hours and the fireplace will automatically go to pilot. You can then access the controls inside your fireplace.

How to Ensure Your Fireplace Cannot Be Turned ON Inadvertently
You can use one of the two following methods to ensure that your fireplace will not turn on when you don’t want it on.

• On gas valve, turn dial from  ON position to  MAN position as shown. Turning dial to MAN will ensures that main burner cannot come on. The pilot will remain on if lit.
• Alternately, remove all batteries from the battery holder next to the wall switch as well as the battery from the handset.

Automatic Shut-Off (in certain conditions)
Your fireplace’s remote control is equipped with an automatic shut-off mechanism which is activated in certain conditions. See page 12 in the Using the Remote Control section for a description of this feature.
Using the Remote Control

Radio Frequency
315 MHz for USA and Canada.
This device complies with Part 15 of the FCC Rules and with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:
(1) this device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.

**NOTE:** Before using the remote control system for the first time, the receiver and the handset must be synchronized. See the section Synchronize Remote Control.

**IMPORTANT:** BEFORE YOU BEGIN, please note that on this system, the settings of time, temperature and automatic ON/OFF can only be programmed when the function display is flashing. Be patient when programming as it can take a few seconds to set.

Note: In the TEMP or TIMER modes, the remote handset senses the room temperature and adjusts the flame accordingly.

To communicate, the handset should be within 15 feet (4.5 meters) of the fireplace.

*Do not leave the handset on the mantel or hearth.*

**TO TURN ON APPLIANCE**

**CAUTION**
When pilot ignition is confirmed, motor turns automatically to maximum flame height.

On the valve, turn MAN knob on the ON, full counterclockwise position.
Place ON/OFF switch (if equipped) in I (ON position).

Simultaneously press the OFF and \( \) (large flame) buttons until a short beep confirms the start sequence has begun; release buttons.
Continuing beeps confirm the ignition is in process.
Once pilot ignition is confirmed, there is main gas flow.
After main burner ignition the handset will automatically go into manual (MAN) control mode.

**TO TURN OFF APPLIANCE**

Press OFF button.

When the pilot is off, it will take 2 minutes before it can be lit again.

**STANDBY MODE (Pilot Flame)**

Press and hold \( \) (small flame) to set appliance at pilot flame.

**FLAME HEIGHT ADJUSTMENT**

In standby mode: Press and hold \( \) (large flame) button to increase flame height.
Using the Remote Control

Press and hold (small flame) button to decrease flame height or to set the appliance at pilot flame. For fine adjustment tap the (large flame) or (small flame) buttons.

Express Low and High Fire
Double-click (small flame) button. “LO” will be displayed.
NOTE: Flame goes to high fire first before going to designated low fire.

Double-click (large flame) button. Flame automatically goes to high fire. “HI” will be displayed.

SETTING °C/24-HR OR °F/12-HR CLOCK
In MAN mode, press OFF and (small flame) buttons until display changes from Farenheit/12-hour clock to Celsius/24-hour clock and vice versa.

SETTING THE TIME
The time display will flash after either:
• Installing the battery or
• Simultaneously pressing the (large flame) and (small flame) buttons.
Press (large flame) button to set the hour.
Press (small flame) button to set the minute.
Press OFF or simply wait to return to MAN mode.

MODES OF OPERATION
Briefly pressing the SET button changes the mode of operation in the following order:

MAN → TEMP → TEMP

→ TIMER → and back to MAN.

NOTE: Manual mode can also be reached by pressing either the (large flame) or the (small flame) buttons.

- Daytime Temperature Mode (Appliance must be in standby mode; pilot ignited) - The room temperature is measured and compared to the set temperature. The flame height is then automatically adjusted to achieve the Daytime Set Temperature.

- Nighttime Setback Temperature Mode (Appliance must be in standby mode; pilot ignited) - The room temperature is measured and compared to the Nighttime Setback temperature. The flame height is then automatically adjusted to achieve the Nighttime Setback Temperature.

- Timer Mode (Appliance must be in standby mode; pilot ignited) - The timers P1 and P2 (Program 1, Program 2) each can be programmed to go ON and OFF at specific times. For instructions see Timer Programming Mode.

NOTE: The display shows the set temperature every 30 seconds.
Using the Remote Control

SETTING THE ON / OFF TEMPERATURES

SETTING THE "DAYTIME" TEMPERATURE
Default Settings:  \text{\textbullet\textbullet\textbullet}\text{TEMP} (sun), 23°C / 74°F

Briefly press SET button to scroll to TEMP \text{\textbullet\textbullet\textbullet}\text{TEMP} (sun) mode. Hold the SET button until the TEMP flashes.

Press \text{\textbullet\textbullet}\text{large flame} button to increase the \text{\textbullet\textbullet} Daytime Set Temperature.

Press \text{\textbullet\textbullet}\text{small flame} button to decrease \text{\textbullet\textbullet} Daytime Set Temperature.

Press OFF or simply wait to complete programming.

SETTING THE "NIGHTTIME SETBACK" TEMPERATURE
Default Settings:  \text{\textbullet\textbullet}\text{TEMP} (moon), “--” (OFF)

Briefly press SET button to scroll to TEMP \text{\textbullet\textbullet}\text{TEMP} (moon) mode. Hold the SET button until the TEMP flashes.

Press \text{\textbullet\textbullet}\text{large flame} button to increase \text{\textbullet\textbullet} Nighttime Setback Temperature.

Press \text{\textbullet\textbullet}\text{small flame} button to decrease \text{\textbullet\textbullet} Nighttime Setback Temperature.

Press OFF or simply wait to complete programming.

Tip
Set the different parameters when they are flashing.
Using the Remote Control

SETTING PROGRAM TIMERS
You can program two periods of time between 12:00 am and 11:50 pm in each 24-hour cycle. The Programs P1 and P2 must be set in the following order during a 24-hour cycle: P1 \( \bullet \), P2 \( \bullet \) and P2 \( \bullet \). The icon \( \bullet \) indicates the beginning of the period (ON) and the icon \( \circ \) indicates the end of the period (OFF). If P1 \( \bullet \) = P1 \( \circ \) or P2 \( \bullet \) = P2 \( \circ \), the programming is cancelled. To keep the fireplace ON all night, set P2 \( \bullet \) at 11:50 am and P1 \( \bullet \) at 12:00 am.

Default settings:
Program 1: P1 \( \bullet \) 6:00 am P1 \( \circ \) 8:00 am
Program 2: P2 \( \bullet \) 11:50 pm P2 \( \circ \) 11:50 pm

Briefly press SET button to scroll to TIMER mode.

SETTING P1 ON TIME
Hold the SET button until P1 \( \bullet \) (sun) is displayed and the time flashes.

Press \( \bullet \) (large flame) button to set the hour.

Press \( \circ \) (small flame) button to set the minutes.

SETTING P1 OFF TIME
Briefly press SET button to scroll to TIMER P1 \( \bullet \) (moon) while the time flashes.

Press \( \bullet \) (large flame) button to set the hour.

Press \( \circ \) (small flame) button to set the minutes.

SETTING P2 ON TIME
Briefly press SET to scroll to TIMER mode P2 \( \bullet \) (sun) while the time flashes. Follow the instructions given to set P1 ON time.

SETTING P2 OFF TIME
Briefly press SET to scroll to TIMER mode P2 \( \circ \) (moon) while the time flashes. Follow the instructions given to set P1 OFF time.

Press OFF button to save these settings. The timers are programmed. See the diagram on programming sequences on the following page.

Tip
If you want to program only one period, program P1 \( \bullet \) and P1 \( \circ \) with desired times and program P2 \( \bullet \) and P2 \( \circ \) with the same time as P1 \( \circ \).
Using the Remote Control

AUTOMATIC TURN DOWN

6 Hour no Motor Movement
Manual Mode/Temperature/Timer Mode: The valve will turn to pilot flame if there is no change in flame height for a 6 hour period. In Temperature/Timer Mode if the ambient room temperature changes, the flame height will adjust automatically to maintain set temperature, and the fire will continue to function normally. The valve will turn to pilot flame if the set temperature and the ambient room temperature remain the same over a 6 hour period.

AUTOMATIC SHUT OFF

Low batteries receiver. With low battery power in the receiver/battery holder the system shuts off the fire completely. This does not apply when the power supply is interrupted.

On-Demand Pilot. This green feature eliminates gas energy consumption during extended appliance inactivity. When the appliance is inactive for 5 days the system automatically extinguishes the pilot. This feature helps the consumer realize cost benefits by automatically eliminating energy consumption during non-heating months and limited use.

LOW BATTERY INDICATION

CAUTION

DO NOT USE a screwdriver or other metallic object to remove the batteries from the battery box or the handset! This could cause a short circuit.

Remote handset: The battery icon will show when the battery needs to be replaced. Replace with one 9 V alkaline battery.

Remote battery holder: Frequent ‘beeps’ for 3 seconds when the valve motor turns indicate the batteries need to be replaced. Replace with four 1.5 V alkaline batteries.

HANDSET / RECEIVER MATCH

The remote control handset and receiver are programmed to function together. In case of a replacement of the handset or the receiver, you will need to reset the receiver to allow them to function together. Contact your dealer for details.
Using the Wall Switch

The Wall Switch can be used to control your fireplace. You can turn the pilot on or off and you can increase or decrease the flame height.

Note that the thermostat and programming functions are not available with the wall switch.

**TO TURN APPLIANCE ON and OFF**

Press ON-OFF button once to light pilot. Press again to shut off pilot.

**TO ADJUST FLAME HEIGHT**

Press and hold large flame button to gradually increase flame height.

Press and hold small flame button to gradually decrease flame height.

Kits & Accessories

### Required Kits

Information accurate at the time of printing and subject to change without notice.

**Fuel Beds (choose one)**

- 1800DWK Driftwood Set Kit
- 1800DGM Decorative Glass Murano
- 1800SWK Split Wood Kit

**Liners (choose one)**

- 1815FBL Linear Fluted Black Liner Set
- 1835LML Limestone Liners
- 1825RGL** Linear Reflective Glass Liner Set (**Add 1725RGL-3 Glass Retainer Kit)

**Trims (choose one)**

<table>

<td>Linear 1&quot; Finishing Trim Black 4005413</td>
</tr>
</tbody>
</table>

**Conversion Kits**

- 1800NGK Conversion to natural gas
- 1800PGK Conversion to propane gas

### Optional Accessories

Information accurate at the time of printing and subject to change without notice.

**Other Accessories**

- GV60CKO Outdoor Fireplace Conversion Kit
- 1506DRK Additional rocks for Driftwood Kit
- 1595CFK Circulating Fan Kit
- 1270RBK Remote Blower Kit
- LDK HeatShift Duct Kits (gravity flow)

**Hearth Gate**

Hearth gates such as Cardinal’s VersaGates are available at retail stores carrying safety products for children.
FOR YOUR SAFETY, READ BEFORE LIGHTING

**WARNING:** If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This appliance has a pilot which must be lighted by hand, remote control, or wall switch. Follow these instructions exactly. To save gas, turn the pilot off when not using the appliance for a prolonged period of time.

B. **BEFORE LIGHTING,** smell all around the appliance area for gas. Be sure to smell next to the floor because some gases are heavier than air and will settle on the floor.

**WHAT TO DO IF YOU SMELL GAS**

- Do not try to light any appliance.
- Do not touch any electric switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to push in or turn the control knobs. Never use tools. If the knobs will not push in or turn by hand, don’t try to repair them; call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control, which has been under water.

**LIGHTING INSTRUCTIONS**

1. **STOP!** Read the safety information above.

2. **TO CLEAR ANY GAS,** turn main valve off by pressing OFF (red dot) button on remote handset (1).
   - Wait five (5) minutes to clear out any gas, then smell for gas, including near the floor. **If you smell gas, STOP!** Follow “B” in the safety information above on this label. If you don’t smell gas, go to the next step.

3. **AUTOMATIC IGGITION:** MAN-knob (2) in ON position. Ensure Flame Adjustment knob (3) is set to lowest setting () (Fig. 1). Locate the pilot (Fig. 3.) inside of firebox at left hand side.
   - On the remote control handset, press the OFF button (red dot) and large flame button () simultaneously; a short acoustic signal confirms the start has begun.
   - Further short acoustic signals indicate the ignition process is in progress.
   - When the pilot is lit, the Flame Adjustment knob (3) will automatically rotate to the highest setting.
   - Press the small flame button () on the remote control handset to reduce the flame height.

4. **MANUAL IGGITION:** MAN-knob (2) in MAN position (Fig. 2). With the window off, locate the pilot (Fig. 3) inside of firebox at left hand side.
   - Set Flame Adjustment knob (3) to the lowest setting ().
   - Push down the metallic core (4) with a pen or similar instrument; this will establish the pilot gas flow.
   - Light gas at the pilot (5) with a match.
   - Continue holding down metal core (4) for about 10 seconds; after release, pilot should remain lit.
   - If the pilot will not stay lit after several tries, turn the gas control knob (3) to OFF () and call your local service technician or gas supplier.
   - Reinstall the window and set the MAN-knob (2) to ON; turn Flame Adjustment knob (3) up () or down () manually or use the flame buttons ()() on the remote control handset to adjust the flame height.

**TO TURN OFF GAS TO APPLIANCE**

**AUTOMATIC SHUT-OFF** (using the remote control handset):

- Press and hold the small flame button () on the remote control handset to shut-off the main burner gas flow.
- Press OFF button (red dot) on remote handset to shut-off the appliance, including pilot flame.
Servicing Your Fireplace
We recommend having your fireplace serviced every year. Contact your supplier quoting the model number. It will be helpful if the appliance’s serial number can also be quoted. These numbers are on the information card. The replacement parts are shown at the end of this manual. Please always quote the part number and description when requesting spare parts.

Safe Operation List
To be performed by a qualified technician only

1. Inspect and operate the pressure relief mechanism to verify relief mechanisms are free from obstruction to operate. See Cleaning Your Fireplace: To refit the window section of this manual.

2. Clean glass window with a suitable fireplace glass cleaner. Abrasive cleaners must not be used. Be careful not to scratch the glass when cleaning. See Cleaning Your Fireplace section of this manual.

3. Inspect the operation of the flame safety system Pilot or Flame rectification device.

4. Inspect and ensure the lighting of the main burner occurs within 4 seconds of the main gas valve opening. Visual inspection should match that outlined in the appliance instruction manual. Inspect primary air openings for blockage. See Checking Pilot and Burner Flame section of this manual.

5. Inspect condition of vent and vent terminal for sooting or obstruction and correct if present.

6. Vacuum and clean any debris in the firebox that is not supposed to be there.

7. Test and measure the flame failure response time of the flame safety system. It must de-energize the safety shutoff in no more than 30 seconds.

8. Check all accessible gas-carrying tubes, connections, pipes and other components for leaks. See Set up Gas Supply section of this manual.

Annual Inspection
In order to maintain the safe operation of your fireplace, contact your dealer to have a qualified technician go over the list below and make the necessary verifications at least once every year.
Cleaning Your Fireplace

**WARNING**
DO NOT TOUCH THE GLASS WHILE IT IS HOT!
Let the fireplace cool first before cleaning it.

Important - Glass cleaning - Mineral deposits
One of the by-products of the combustion process in a gas appliance is a mineral which can show up as a white film on the ceramic glass of the viewing door. The composition of the deposit varies with location and time. It is believed to be associated with the varying sulfur content of the gas. You may have the problem intermittently.

We have consulted with ceramic glass manufacturers and they cannot offer a definitive solution to this problem. Dealers have tried various cleaning products with varying results. The following are recommendations only and are not meant to guarantee results.

**NOTE:** This is a problem beyond Miles Industries’ control and is not covered under warranty.

- Clean the glass regularly as soon as you notice the buildup (white film). If the film is left for a longer period of time, it will etch into the glass. It is then much harder, if not impossible, to remove.
- **NEVER use an abrasive cleaner or ammonia-based cleaner on the ceramic glass.** Any abrasion of the surface has the immediate effect of compromising the strength of the glass. An emulsion type cleaner is recommended.
- Use a soft damp cloth to apply the cleaner. Dry the glass with a soft, dry, preferably cotton cloth. Most paper towels and synthetic materials are abrasive to ceramic glass and should be avoided.
- Our dealers have had good results from the products listed below. We cannot, however, guarantee the results of these products.
  - Brasso, Polish Plus by Kelkem, Cook Top Clean Creme by Elco, White Off by Rutland, Turtle Wax

_Do not clean the glass while it is hot!

Always securely replace the window and the barrier screen before lighting.

If broken, the glass pane may only be replaced as a complete window unit as supplied by the manufacturer.

If the barrier becomes damaged, the barrier shall be replaced with the manufacturer’s barrier for this appliance.

Clean the window panes following the guidelines in this section.

Clean the steel trim with mild soap and warm water. Any alcohol/solvent base cleaner will weaken the coating and damage it.

Clean the barrier screen dusting it with a soft brush.

Clean the firebox ceramic logs/rocks and walls dusting them with a soft brush. Dust can also be removed from the burner using a soft brush after removing the fuel bed. **When cleaning, make sure that no particles are brushed into the slots of the burner.**

**WARNING**
CHOKING HAZARD! Ensure that the fireplace area is clear of firebed particles as these could be ingested by small children. Vacuum thoroughly around the fireplace area after cleaning.

To remove the window for cleaning, we suggest you get help from another person as the window is long and heavy:
1. Remove the barrier screen.
2. Remove the side doors and the plinth.
3. Remove plinth support bracket.
4. Find the levers on each side of the window towards the top. Using your finger, pull the levers towards you and unhook them from the window frame brackets.

Maintaining Your Fireplace

**WARNING**
Spring Loaded Window Levers
5. Gently pull the top of the window outward.
6. Lift the window out of its bottom railing and set it aside in a safe place to avoid damage.

**To refit the window:**
1. Place the window in its bottom railing. **Ensure to remove any vermiculite or glass particles in the railing before installing the window.**
2. Push the top of the window frame against the firebox.
3. While you hold it, pull the side levers back into the window brackets on each side.

**WARNING**

Failure to install the window correctly can leak carbon monoxide, affect the performance of the fireplace, damage components, cause overheating resulting in dangerous conditions. Damage caused by incorrect window installation is not covered by the Valor warranty.

**DANGER**

The window unit must be correctly installed, fastened and sealed after servicing or serious bodily injury and/or damage to the appliance may result.

To ensure a safe operation:
- Double-check that the bottom of the window frame is correctly installed in the bottom support railing;
- Verify that the levers are hooked properly to the window tabs then;
- Pull out the top of the window and release it to insure the springs return it;
- Ensure the window is sealed before operation.

4. Apply firm hand pressure around the window frame to ensure the window is sealed tight against the firebox.
5. If the Hot Glass Warning plate has been removed from the front lower corner of the window, reinstall it by sliding it between the glass and the frame as indicated.
Checking Pilot and Burner Flames

A periodic check of the pilot and burner flames should be made. Check after the fire has been on for at least 30 minutes. The pilot flame must cover the tip of the thermocouple probe. The main burner flame pattern will vary from appliance to appliance depending on the type of installation and climatic conditions.

Correct Flame Appearance

**1800DWK—Driftwood**

Pilot Flame can be seen at the back of the fire bed on the left hand side

**1800DGM—Decorative Glass Murano**

Pilot Flame can be seen at the back of the fire bed on the left hand side

**1800SWK—Split Wood**

Pilot Flame can be seen at the back of the fire bed on the left hand side

---

**WARNING**

FOR SAFETY PURPOSE, ensure the barrier screen is re-installed on the fireplace after maintenance.

---

6. Reinstall the plinth support bracket hooking it up to the stiffener bracket located below the window as shown.

7. Reinstall the plinth and side doors.

8. **Reinstall the barrier screen on the trim.**

9. Verify that the screen is properly hooked to the trim and secure.

The appliance area must always be kept clear and free from combustible materials, gasoline and other flammable vapors and liquids.

Inspect the vent terminal outdoors regularly to make sure that snow, trees, bushes, leaves, or other objects do not obstruct it.

Examine the vent system and terminal regularly. We recommend annually.
Replacing Batteries

**WARNING**
DO NOT ATTEMPT TO CHANGE THE BATTERIES WHILE THE FIREPLACE IS STILL HOT! Let the fireplace cool first before touching it.

**CAUTION**
DO NOT USE a screwdriver or other metallic object to remove the batteries from the battery holder or the handset! This could cause a short circuit.

Low batteries signal: see page 12.

BEFORE changing the batteries, turn the fireplace off (including pilot).

The appliance uses four 1.5 V AA alkaline batteries located next to the wall switch and one 9 V alkaline battery in its handset. Batteries should last one to two seasons, depending on usage. Removing the batteries in the off-season will extend the battery life.

To replace the batteries:
The battery compartment is located next to the wall switch in the vicinity of the fireplace. Its front plate is attached with magnets to the wall switch box.

1. Pull on the plate next to the wall switch to access the batteries.

2. Disconnect the snap connector from the battery holder. **Do not pull the connector by the wire!**

3. Replace the batteries with 4 AA alkaline batteries orienting them as indicated inside the holder.

4. Reconnect the snap connector to the battery holder.

5. Put the battery holder back in its place beside the wall switch and snap it in place.

**Using Handset Wall Holder**
Your fireplace equipment includes a wall holder to store the handset. If it hasn’t be installed, refer to the instructions further on in this manual for the installation.
Specifications

Approval & Codes
This appliance is certified to ANSI Z21.88-2016/CSA 2.33-2016 American National Standard / CSA Standard for Vented Gas Fireplace Heaters for use in Canada and USA, and to CGA.2.17-91 High Altitude Standard in Canada. This appliance is for direct vent installations.
This appliance complies with CSA P.4.1-15 Testing method for measuring annual fireplace efficiencies.
The installation must conform to local codes or, in the absence of local codes, with the National Fuel Gas Code, ANSI Z223.1/NFPA 54 or the Natural Gas and Propane Installation Code CAN/CGA-B149.1. Only qualified licensed or trained personnel should install this appliance.
This appliance must be electrically grounded in accordance with local codes, or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70 or the Canadian Electrical Code, CSA C22.1.

*High Altitude Installations
Input ratings are shown in BTU per hour and are certified without deration for elevations up to 4,500 feet (1,370 m) above sea level.
For elevations above 4,500 feet (1,370 m) in USA, installations must be in accordance with the current ANSI Z223.1 and/or local codes having jurisdiction.
Heating value of gas in some areas is reduced to compensate for elevation—consult your local gas utility to confirm.
For installations at elevations above 4,500 feet (1,370 m) in Canada, please consult provincial and/or local authorities having jurisdiction.

Supply Gas
Heater engine 1800JN is used with natural gas.
Heater engine 1800JP is used with propane gas.

The supply pressure must be between the limits shown in the Ratings section above.
The supply connection is 3/8” NPT male and located on the left hand side of the firebox. A shut-off valve (not supplied) is required on the supply line to isolate the unit during service. See Supply Gas Installation section for details.

Conversion Kits
The 1800J L3 is supplied as natural gas or propane gas and is field convertible between fuels. See instructions packaged with the conversion kit for further information.

Electrical
The 1800J is designed to run on battery power and does not require an electrical power source to operate as a heater. However, it requires electrical power to operate optional 1595CFK Circulating Fan Kit or 1270RBK Remote Blower Kit.

LDK HeatShift Duct Kit
The 1800J is designed to allow the installation of the optional LDK HeatShift Duct Kit, a convection system that redistributes the warm air flow away from the fireplace opening to a more desirable location using natural convection, without use of a fan.
The warm air flow may be relocated to a position higher up the wall, out the sidewalls, or even to another room. The result is much cooler wall temperatures above the fireplace opening for locating televisions, artwork, etc.
Please note that the framing and mantel clearances are affected by the installation of the LDK. Refer to the installation manual packed with the kit for more information.

Outdoor Conversion Kit
The 1800J models are supplied standard for indoor applications and may be adapted for installation in specific “outdoor” applications protected from weather as defined in the GV60CKO outdoor conversion kit manual.

WARNING
Optional electrical accessories ARE NOT ALLOWED when adapting appliance for outdoor use.

This appliance is designed and approved as a supplemental heater and provides the potential for most energy conservation when used while attended. The use of an alternate primary heat source is advisable.
Overview

Note: This appliance may be installed in outdoor, weather protected environments as defined in the GV60CKO Outdoor Conversion Kit instruction manual.

- **Remote Handset Wall Holder**
- **Surround Plate with Barrier Screen (required)**
  - Narrow 1" Trim 1875LFB and wider 5-1/4" steel Trim 1850 adjustable, accept additional non-combustible finish over cement board and behind trim.
- **Framing**—See Framing Requirements
- **Mantel**—See Mantel & Hearth Clearances
  - 1/2 inch thick non-combustible cement board — **NOT supplied**
  - Supplied as vertical outlet. **SHOULD NOT BE** converted to horizontal outlet. **Note** - Minimum 24" vertical rise required right at appliance
- **Remote Battery and Wall Switch Kit (required)** (35-foot wire length) (supplied)
- **Optional LDK HeatShift Duct Kit outlets (4)**
- **1800J heater**
- **Note:** This appliance may be installed in outdoor, weather protected environments as defined in the GV60CKO Outdoor Conversion Kit instruction manual.

**WARNING**

- **Some materials or items, although safe, may discolor, shrink, warp, crack, peel, and so on because of the heat produced by the fireplace. Avoid placing candles, paintings, photos, and other items sensitive to heat around the fireplace.**

**WARNING**

- **HOT WALL SURFACES!** The wall directly above the fireplace is constructed of non-combustible materials and, although safe, it may reach temperatures in excess of 250°F depending on choice of trims. Do not touch. Finish the wall using materials suitable for these temperatures. We recommend installing optional LDK HeatShift Duct Kit when hot walls are a concern.

PARTIAL SHELF, top outlet
Framing Requirements

Venting Considerations—Vertical Takeoff

*Notes—ALL venting considerations

- Dimensions of venting are based on using Dura-Vent elbows. Elbow curve radius dimensions will vary when using other brands. In general, other brands have slightly bigger radius.
- Minimum 24 inches vertical pipe section required at unit. Refer to venting chart on page 30 for allowable horizontal runs.
- 3 inches clearance to combustibles required above horizontal pipe. Slope horizontal pipe upwards 1/4 inch per foot. 1 inch clearance required around sides and bottom of horizontal pipe and around vertical pipe.
- When calculating effective pipe lengths subtract approximately 1-1/2 inch for pipe joint - for example, a 12 inches pipe section will add approximately 10-1/2 inches overall.
**Venting**

**Top Outlet ONLY**
This unit is supplied with a top vent outlet and should **NOT** be field-converted to a rear vent outlet. See vent chart on page 30.

**Vent Material**
This unit is approved for installation using 4 x 6-5/8 inches co-axial direct vent pipe and accessories as listed in the *Approved Venting Components* section on pages 58–59 of this manual. Follow the installation instructions supplied with the individual venting accessories.

**Vent Sealing**
Seal all outer coaxial pipe and elbow joints, including sectioned elbow joints, using high quality, high temperature 2 inch wide self-adhesive aluminum foil tape (Nashua-322-2 brand or similar). Wrap the tape completely around all joints and press firmly to seal. A high temperature black silicone sealant may be used in the outer joints as a substitute to foil tape. Ensure all the pipe joints have a minimum of 1 ¼ inch overlap.

**Wall Thickness**
The appliance vent is suitable for penetrating a combustible wall assembly up to 8 inches in thickness. A non-combustible wall can be of any thickness up to the maximum horizontal run of vent pipe allowed for the particular installation.

**Framing Vent in Combustible Walls & Ceilings**
When penetrating through combustible walls and ceilings, frame a minimum of 10 in x 10 in opening and ensure that the insulation is kept clear of the vent pipe using either a wall thimble or an attic insulation shield. Follow the installation instructions supplied with the individual venting components.

**Important Installer Notice – Weather Sealing & Vapor Barriers**
It is the installer’s responsibility to ensure that vent installations through exterior walls are caulked and weatherproofed in such a manner as to:

- Prevent rain water from entering the wall from the weather side by adequately caulking the outer vent plate to the exterior wall surface.
- Prevent moisture inside the home from penetrating into the wall structure by ensuring the inside wall plate is adequately sealed to the inside vapor barrier.
- Prevent rain water and moisture from entering the walls by sealing the joints between the outer vent tube and the inner and outer wall plates.

We recommend the use of a high quality polyurethane sealant.

All horizontal pipe runs must be graded 1/4 inch per foot upwards in the direction of the exhaust flow. The final pipe length, when terminating through the wall may be graded downwards slightly to prevent water migration.

HORIZONTAL TERMINATION
How to Read the Venting Chart
The chart below applies to co-axial roof or wall termination.
1. Minimum 24-inch vertical pipe section required right at unit.
2. The total length of the vent pipe cannot exceed 40 feet.
3. The minimum vertical height with roof termination is 6 feet.
4. Any combination of rise and run can be used as long as they are within the allowable limits shown on the chart below.
5. A maximum of 4 x 90 degrees elbows—or equivalent (2 x 45 degrees = 90 degrees)—can be used. Excludes the 45 degrees take-off elbow shipped with the appliance.
6. Each 90 degrees elbow installed on the horizontal plane is equivalent to a 3 feet horizontal pipe; therefore, 3 feet must be subtracted from allowable horizontal run. (45 degrees elbow is equivalent to 18 inches horizontal pipe.)
7. All horizontal pipe runs must be graded 1/4 inch per foot upwards in the direction of the exhaust flow. The final pipe length, when terminating through the wall may be graded downwards slightly to prevent water migration.
8. A restrictor adjustment is required for most installations having a vertical rise—see next section.

Note: The restrictor is shipped installed at the exhaust exit of the firebox.

Venting Chart

Allowable Co-Axial Vent Configurations with restrictor positions

Example 1
V Value = V1 (4') + V2 (3') + V3 (2') = 9'
H Value = H1 (2') = 2'
Restrictor position # 1 required
Restrictor

The restrictor is located in the roof of the firebox hidden above the top liner panel. Adjust the restrictor before installation of the top liner panel. Should subsequent adjustment be required, you will need to remove some of the liner panels and brackets—see page 40.

**ALL INSTALLATIONS REQUIRE A RESTRICTOR** for improved flame picture and performance. This unit is supplied with a pre-fitted restrictor having four different positions or settings. The restrictor is shipped mounted at the maximum open position. The level of restriction required depends on the vertical rise in the venting system and, to a lesser degree, the horizontal run and number of elbows.

The amount of restriction is based on laboratory tests. The ideal restrictor position may vary slightly, especially when the vent pipe length is near the limits of the acceptable configurations for each type of restrictor.

The chart on the previous page shows the vent restrictor required relative to the length of the vent pipe.

To set the restrictor position:

1. Establish the required position of the restrictor looking up the venting table on the previous page.
2. Release the screws (2) on each side of the restrictor already installed on the firebox roof port.
3. Slide the restrictor in the required position.
4. Tighten the screws.
Co-axial Venting

Horizontal Vent Termination Location
- The vent terminal must be located on an outside wall or through the roof.
- This direct vent appliance is designed to operate when an undisturbed airflow hits the outside vent terminal from any direction.
- The minimum clearances from this terminal that must be maintained when located on an outside wall are shown in figure below. Any reduction in these clearances could result in a disruption of the airflow or a safety hazard. Local codes or regulations may require greater clearances.
- The vent terminal must not be recessed into a wall or siding.
- The vent terminal should be positioned where any snowdrifts will not cover it.
- Sidewall vent terminations require a terminal guard such as 658TG when accessible—within 7’ of ground.

![Diagram of vent terminal locations and clearances]

Installation Planning

Installer—READ THIS FIRST

Only qualified licensed or trained personnel should install this appliance.

1. YOU NEED TO KNOW FROM THE HOMEOWNER:
   - Will the optional LDK Duct Kit be used;
   - The height of the unit and hearth if used;
   - The thickness and type of the wall finish around the firebox opening;
   - What accessories (trim, decorative lighting, etc.) will be installed with this fireplace;
   - The venting configuration.

2. Unpack the appliance, removing all items packed inside and around the appliance.

3. Check that you have everything, using the Pack Content sheet. Also, check that you have:
   ◊ a fuel bed (packed separately)
   ◊ a set of liners (packed separately)
   ◊ LDK HeatShift kit if used.

4. Carefully read the Installer’s Checklist included with the fireplace for the installation sequence.
Plan Wall Finish

Non-Combustible Materials Specifications
Material which will not ignite and burn. Such materials are those consisting entirely of steel, iron, brick, tile, concrete, slate, glass or plasters, or any combination thereof.
Materials that are reported as passing ASTM E 136, Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750 °C shall be considered non-combustible materials.

Combustible Materials Specifications
Materials made of or surfaced with wood, compressed paper, plant fibers, plastics, or other material that can ignite and burn, whether flame proofed or not, or plastered or unplastered shall be considered combustible materials.

Non-combustible cement board
The L3 Linear fireplace requires a 1/2” (13 mm) thick non-combustible cement board to be used as a wall surface immediately surrounding the unit on each side—see diagram below for minimum coverage.

Extending the cement board well beyond the minimum shown will help avoid cracking due to differential expansion of materials.
Pre-drill cement board with oversized holes and do not over-tighten screws to avoid cracking due to heat expansion.
Standard gypsum wall board may be used beyond the perimeter of the cement board.

Non-combustible finishing over cement board
Additional non-combustible material such as tile, etc., may be applied over top of the cement board or you may choose to leave it finished clean with no tile—see page 36.
Be aware that a trim is always required and that the 1850 and 1875 style trims will accept tile, etc. tucked behind them (up to 5/8” thick for the 1875 and up to 1 inch thick for the 1850). Additional non-combustible finishes, if desired, may be butted up to the trims. Finish should not cover the trims.
Installation Planning

Cracking wall finishes
We recommend installing the optional LDK HeatShift Duct Kit to reduce the wall temperatures and minimize the possibility of cracking wall finishes.

If a clean finish with no tile, etc. is desired, joints in the cement board and the transition to gypsum board will require special attention if future cracking is to be controlled. Be aware that temperatures on the non-combustible wall surface above the appliance can exceed 250°F.

Below are some tips on how to best avoid any cracking:

- Allow materials to dry thoroughly before finishing the wall. Cement board has the ability to absorb up to 30 percent of its weight in water and may shrink as much as 1/8" over a 48" length when drying from a saturated condition. Running the fireplace before final finishing will help drive out moisture.

- Always pre-drill screw holes through cement board and use screws with self-milling head.
- Always use tape over joints.
- Behind joints, double up studs or use studs “on the flat” to add extra support to the joint. Adhesive on the backside of wall board behind any joints can help control differential movement.
- Use multiple, thinner coats of joint compound and allow to dry thoroughly between coats.
- Ensure framing materials are dry.
- After finishing the wall, introduce heat gradually to slowly dry any excess moisture rather than drying too fast.
- Avoid notching cement board or tiles around corners of window opening and instead provide a joint that intersects the corner.

Unpack Appliance
Beware of sharp edges! Wear gloves!

1. Remove the cardboard wrapping and the wood pallet from the appliance and discard.
2. Unpack any loose items from around the appliance.
3. Verify that you have all the components required for the installation, including:
   - approved non combustible cement board;
   - liners and fuel bed (in separate carton);
   - trim kit with barrier screen;
   - venting components and accessories;
   - optional LDK HeatShift Duct Kit if used;
   - electrical components if installing optional decorative light wall switch or blower.

Install Standoffs
The standoffs are supplied flat on top of the firebox and fixed at one end. Bend the standoffs as shown and fix the loose end to the top of the firebox.
Fit optional LDK HeatShift Duct Kit’s take-off collars to appliance (if used)
See installation instructions packed with the LDK kits for details.

**Fit Appliance into Framing**
1. Remove the 4 screws retaining the engine to its pallet.
2. Taking great care not to cut your hands on the sheet metal edges, lift the appliance out of its packing base and place it in the framing. *Make sure that the unit is at the right height with consideration to the height of the hearth or combustible flooring.*
3. Fold out four mounting tabs and install the appliance in the framing as shown.
4. Fasten the unit to framing using 4 screws or nails at the mounting tabs. **Note:** The sheet metal front face of the appliance is flush with the framing studs.

**Remove Window**
The window is held in place by a spring-loaded lever on each side.
1. To remove the window, locate the levers on each side of the window towards the top. Using your finger, pull the lever towards you and unhook it from the window frame bracket.
2. Gently pull the top of the window outward.
3. Lift the window out of its bottom railing and set it aside in a safe place to avoid damage.

**Complete Installation of optional LDK HeatShift Duct Kit** (if used)
See installation instructions packed with the LDK kits for details.
Install Electrical Wiring (for optional accessories)

This section provides information to install the electric pre-wiring required for use with the 1595CFK Circulating Fan Kit.

All wiring must be done by a qualified electrician in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70 or the Canadian Electrical Code, CSA C22.1.

Electrical Requirements
1595CFK—120 V, 60 Hz, less than 1 amp

General Requirements
The optional 1595CFK kit includes a three-prong grounded plug to plug into a grounded duplex receptacle installed within the fireplace enclosure by a qualified electrician.

Notes
• A fan speed control will need to be provided by the electrician, mounted at a convenient location on the wall, and connected to control the power supply to the receptacle within the fireplace enclosure.
• The receptacle and box must be located as per these instructions. Wiring within this box must have a minimum 90°C temperature rating.

Installation
1. Thread the cable through the cable clamps and through the hole in the lower right hand corner of the fireplace casing. Do not tighten the clamps yet. Note: Receptacle tabs may be “split” to render the other receptacle inoperative.

2. Provide a steel surface mount electrical utility box (Iberville BC 1110 or equivalent), thread cable through knock-out in the end of box and through the cable clamp locking ring (if used).

3. Strip wire and terminate grounded receptacle. “Split” receptacles to render the other receptacle inoperative.

4. Mount receptacle into electrical box.
5. Mount steel cover to electrical box and plug in the fan cable.
6. Position the electrical box to the base of the fireplace with the fan cable plugged in sideways, laid sideways.

Positioned sideways inside firebox
Installation

7. Pull the excess cable back through the cable clamp and tighten the locking ring to the cable clamp. Alternate clamp without locking ring may be used - ensure the proper clamp is used for the type of cable used.

8. Tighten cable clamp on outside of fireplace casing and secure and excess wire to framing.

Replace the By-Pass Screw (if using 1800SWK—Split Wood Kit ONLY)

Replace the minimum rate by-pass screw on the valve

You can access the by-pass screw on the valve through the hole in the lower front panel of the appliance when the wall finish is not applied. Otherwise, the burner module must be removed from the appliance.

Remove and replace the minimum rate by-pass screw from the valve with the by-pass screw supplied with the 1800SWK. The screw has a rubber o-ring holding it into the valve body and may require prying out or removing the screw with needle nose pliers.

Set-up Gas Supply

The gas supply inlet connection is a 3/8” NPT male connector located on the left hand side of the firebox.

The unit is supplied with a stainless steel flex line to allow the appliance to be disconnected for service. An individual shut-off valve (not supplied) is required on the supply line ahead of the flex connector.

Use only new black iron or steel pipes or copper tubing if acceptable—check local codes. Note that in USA, copper tubing must be internally tinned for protection against sulfur compounds.

Unions in gas lines should be of ground joint type.

The gas supply line must be sized and installed to provide a supply of gas sufficient to meet the maximum demand of the appliance without undue loss of pressure.

Sealant used must be resistant to the action of all gas constituents including LP gas. Sealant should be applied lightly to male threads to ensure excess sealant does not enter gas lines.
Pressure test the supply line for leaks.
The appliance and its individual shut-off valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig (3.5 kPa).

The appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.5 kPa).

Failure to either disconnect or isolate the appliance during pressure testing may result in regulator or valve damages and void the warranty. Consult your dealer in case of damages.

Pressure Test Points
The minimum supply pressure is given in the section Specifications of this manual—page 20.

All piping and connections must be tested for leaks after installation or servicing. All leaks must be corrected immediately.

When testing for leaks:
• Make sure that the appliance is turned off.
• Open the manual shut-off valve.
• Test for leaks by applying a liquid detergent or soap solution to all joints. Bubbles forming indicate a gas leak.

Never use an open flame to check for leaks. Correct any leak detected immediately.

The pressure test tapping locations are shown in the figure at right. An internal regulator within the valve controls the burner manifold pressure. The correct pressure range is shown in the table in section Specifications of this manual on page 20. The pressure check should be made with the burner alight and at its highest setting. See Lighting Instructions section for full operating details on page 14.
Install Liners

All L3 liners install in the manner outlined below with the exception of the 1825RGL Reflective Glass Liners—see instructions supplied with the 1825RGL liners.

Unpack the liner panels carefully.

1. Inside the firebox, on the top of each side, release the screw of the side brick anchors (one per side) just enough to allow them to rotate.

2. Place the right end panel against the right wall of the firebox and secure it with the anchor.

3. Install the left end panel in the same manner.

4. The rear panel is supplied in three sections which overlap each other. The two outer sections are identical and overlap the center section.

   a) Identify the right side outer section. From the middle of the firebox, insert the section upwards behind the top railing and place it on the ledge above the ports. Slide the section sideways to the right into position, behind the tabs, as far as possible.

   b) Identify the left side outer section. Like the right one, insert it from the middle of the firebox and slide it to the left, behind the tabs, as far as possible.

   c) Insert the center section upwards behind the top railing and place it onto the ledge.

   d) Pull back both side sections towards the middle to overlap the center one.
Installation

5. The top panel is supplied in two identical sections. The sections are beveled and the smooth black ‘fire side’ is notched at the front and straight at the back. When installed, the top panel rests on the front and back railings.

a) Insert one section of the top panel, smooth black surface down. Push the section on the left side as far as it will go—there is a stop tab at the left end of the railings.

b) Insert the second section in the same manner. Push it against the first section and ensure there is no gap between the sections.

NOTE: If gapping occurs between each section of the rear panel, a lift tab located on each end of ledge can be bent by hand to close the gap.
Install Driftwood Kit 1800DWK

Material required
- Driftwood Kit, which contains:
  ◊ Left and right steel platforms
  ◊ 7 logs
  ◊ 10 pebbles
  ◊ 1 bag of vermiculite
- Small container to distribute vermiculite (not supplied)

Installation

Platform
Carefully unpack the kit.

1. Install the steel left and right platforms around the burner as indicated. The openings in the platforms should be underneath.

2. Fill a small container with approximately 3 cups (750 ml) of vermiculite from the bag supplied.

3. Carefully spread the vermiculite on the surface of burner patting it gently with your hand to form a single layer to the approximate level of the top of the flange at the edge of the burner. Do not pour too much to avoid blocking the burner ports.

NOTE: Ensure the area within the pilot shield is clear of vermiculite.

 Logs and rocks
The log have pegs or notch to help you locate them on the platform. Install the logs as shown below.

1. Place the left hand rear log on the left hand side of the burner fitting the log’s pegs into the holes of the platform as indicated.

2. Place the left hand cross log resting it into the recess on top of the rear log as indicated.
3. Place the center rear log fitting the log’s pegs into the holes of the platform as indicated.

4. Place the center front log fitting the log’s pegs into the holes of the platform as indicated.

5. Place centre cross log fitting the peg at its front end into the hole in the platform and resting its rear end into the recess on top of the rear log as indicated.

6. Place the right rear log at the right hand side of the burner fitting the log’s peg into the hole of the platform as indicated. Rotate the front end of the log if necessary to ensure it rests under the front edge of the firebox.
Installation

7. Place the right cross log into the front notch of the rear log; its peg serves here as a hook to maintain it in position. Pivot the other end of the log to rest on the edge of the vermiculite bed as indicated.

8. Place the rocks on the platform as shown below. Some of the rocks can be used to hide the platform seam or the protruding corners of the burner. You can also place one or two rocks on the vermiculite as shown. Ensure that there is no rocks too close to the pilot area.

WARNING

CHOKING HAZARD! Ensure that the fireplace area is clear of vermiculite particles as these could be ingested by small children. Vacuum area after installation.
Install Decorative Glass Murano 1800DGM

Material required
• Murano Glass Fire Kit, which contains:
  ◊ 2 bags of clear fireglass
  ◊ Left and right glass platforms
  ◊ 4 sheet metal runners
  ◊ 2 sheet metal middle tabs
• Small container to distribute fireglass (not supplied)

Installation
Carefully unpack the kit.

1. Install the 4 sheet metal runners around the burner. The open end of the runners are oriented towards the middle and the tabs at the bottom. The tabs fit into the slots of the burner supports.

2. Install the sheet metal middle tabs in front and behind the burner between the runners as indicated. The flange is oriented towards the burner. The small tabs at the bottom fit into the slots of the middle supports under the burner.

3. Place the left and right glass platforms, smooth side on top, around the burner on top of the runners and tabs. The left platform has a notch that goes around the pilot. Push the platforms as far back as possible to maximize the air gap behind the burner.

4. Fill a small container with approximately 3 cups (750 ml) of fireglass.

5. Carefully spread the fireglass on the surface of burner patting it gently with your hand to form a single layer to the approximate level of the top edge of the flange around the burner. Do not pour too much to avoid blocking the burner ports.

6. Some fireglass may be added on the platform to cover the edge of the burner. **NOTE:** Ensure the area within the pilot shield is clear of fireglass.

**IMPORTANT:** Approved for use only with the fireglass provided with your Valor fireplace or the tempered crushed fireglass brands American Fireglass™ or firegear. The use of any other fireglass products may void your fireplace warranty.

**WARNING**

**CHOKING HAZARD!** Ensure that the fireplace area is clear of fireglass particles as these could be ingested by small children. Vacuum area after installation.
Install Split Wood Kit 1800SWK

Material required
- Split Wood Kit, which contains:
  ◊ Left and right steel platforms
  ◊ 12 logs
  ◊ 1 bag of splinters
  ◊ 1 bag of small embers
  ◊ 2 by-pass screws (1 natural gas, 1 propane gas)

Installation
Replace by-pass screw on the valve—see page 38.

Platform
Carefully unpack the kit.
Install the steel left and right platforms around the burner as indicated. The openings in the platforms should be underneath.

Logs, embers & splinters
The logs are marked with a number to facilitate their identification.

Install logs in the following sequence:
Logs #12, 13, 17, 9 and 16.
Log #12 has a notch underneath and sits across the left hand rear corner of the burner.

Log # 13 sits behind the burner at the right of the pilot. It has a locating pin.
Installation

Log #17 straddles the burner. It has a locating pin in front of the burner.

Log #16 has a notch underneath and sits across the right hand rear corner of the burner.

Log #9 straddles the burner. It has a locating pin in front of the burner.

Spread one layer of embers and splinters on the burner between the logs.

Logs 12, 13, 17, 9 and 16 installed and embers added on burner
Continue installing logs in the following sequence: Logs #3, 2, 5, 14, 15, 7 and 11. Log #3 goes at the left, in front of the burner.

Log #2 rests on log #12. Its front end rests just behind the edge of the firebox opening.

Log #5 has a pin which goes into the square hole. The other end of the log rests on a notch on log #13.

Log #14 rests on log #5.
Log #15 rests on log #9.

Log #11 rests on log 16.

Log #7 rests on log 17.

All logs installed
Add some embers on the platform around the logs to hide the unused holes and burner lip.

**WARNING**

CHOKING HAZARD! Ensure that the fireplace area is clear of ember/splinter particles as these could be ingested by small children. Vacuum area after installation.
**Installation**

**Refit Window**

1. To refit the window, place it in its bottom railing. Ensure there is no glass, vermiculite or shale particles in the bottom railing.

2. Push the top of the window frame against the firebox.

3. While you hold it, pull the side levers back into the window brackets on each side.

4. Apply firm hand pressure around the window frame to ensure the window is sealed tight against the firebox.

5. If the Hot Glass Warning plate has been removed from the front lower corner of the window, reinstall it by sliding it between the glass and the frame as indicated.

**WARNING**

Failure to install the window correctly can leak carbon monoxide, affect the performance of the fireplace, damage components, cause overheating resulting in dangerous conditions. Damage caused by incorrect window installation is not covered by the Valor warranty.

**DANGER**

The window unit must be correctly installed, fastened and sealed after servicing or serious bodily injury and/or damage to the appliance may result.

To ensure a safe operation:

- Double-check that the bottom of the window frame is correctly installed in the bottom support railing;
- Verify that the levers are hooked properly to the window tabs then;
- Pull out the top of the window and release it to insure the springs return it;
- Ensure the window is sealed before operation.
Install Remote Battery and Wall Switch Kit RBWSK (required)

The Remote Battery and Wall Switch Kit is provided with this appliance. It is connected to the receiver in the fireplace.

Material required
- 4 AA 1.5V alkaline batteries supplied with the engine
- Remote Battery and Wall Switch Kit, which contains:
  ◦ 1 Wall Switch
  ◦ 4 Long Screws
  ◦ 1 Battery Holder
  ◦ 1 Plate with magnets
  ◦ 1 Battery Cover assembly
  ◦ 1 Harness assembly - 35 ft
  ◦ 1 Junction Box
  ◦ 1 Cover plate and Screws
  ◦ 1 Cable tie

Installation
The receiver is located on the left side of the appliance, left of the control valve behind the appliance’s front panel. It is maintained in position with Velcro bands.

1. Pull out the receiver from its location to connect the battery holder and wall switch.
2. Feed the ‘white connector end’ of the harness assembly through side holes in fireplace liner body to receiver. Ensure sufficient harness length to allow for removal of receiver. Note - coil up any extra harness at fireplace end.
3. Connect switch to auxiliary 5-pin junction and power connection to jack.
4. Run harness assembly to mounted position of junction box, securing harness to framing using insulated staples (not included)
5. Feed harness assembly through a restrain on rear of junction box, feeding through until harness sheath is pinched by retainer and providing sufficient length to make connection to rear of switch and battery holder.
6. Secure junction box to the mounting surface using appropriate fasteners (not included)
7. Align molex connection on switch cable of harness assembly and connect to switch.

---

CAUTION

Do not run the switch wire over the top of the firebox. Route the wire so it does not contact the firebox.
8. Mount switch plate to junction box with 2 long screws provided. Note: switch position left or right to suit homeowner wishes.

9. Locate and secure magnet plate using 2 ‘long’ screws provided

10. Place and secure cover plate to box using 4 screws provided

11. Feed cable tie through the 2 side slots of battery cover assembly.

12. Position battery holder to rear face and secure together with cable tie. Note clearance is required for battery snap connection.

13. Make the snap connection, load 4 AA alkaline batteries into holder (included with fireplace) then feed back into junction box assembly. 

   **Note:** Do not put batteries in the receiver, only in the battery holder by the wall switch.

14. Test the operation of the wall switch—see page 13.
Synchronize Remote Control
The receiver and the handset of the remote control system must be initially synchronized before the first use.

1. Insert one 9 V alkaline battery in the handset.
2. Locate the Reset button on the top side of the receiver.
3. With a sharp object, press and hold the receiver’s reset button until you hear one short and one long beeps. Release the reset button after the second beep.
4. Within the subsequent 20 seconds, press the (small flame button (🔥) on the remote handset until you hear two short beeps confirming the synchronization is set.

This is a one time setting only and is not required when changing the batteries in the remote battery holder. The remote control system is now ready to use.
Check Operation
Turn the fireplace flame up and down using the remote control to confirm that the full range of inputs is achieved—see the remote control operation instructions on pages 8–12.

Set Aeration (if necessary)
Light the fire and allow the unit to warm up for 11–15 minutes to evaluate the flame picture. The burner is equipped with an adjustable shutter to control primary aeration. The shutter is factory-set to an aeration gap which will give optimum performance for the vast majority of installations.

Depending of the fuel bed used, altitude and other considerations, the flame picture may be improved by adjusting the aeration. The need for adjustment should be determined only by operating the appliance with the fuel bed, panels and window installed and evaluating the flame picture after a 15-minute warm-up.

Increasing aeration will cause the flames to appear more transparent and blue showing more ceramic effects glow.
Decreasing aeration will cause the flames to appear more yellow or orange showing less ceramic effects glow.
Too little aeration may result in black carbon forming and dropping into the firebox.

The air shutter is located under the burner. To access it, remove the platform. To adjust it, loosen the air shutter screw, adjust and re-tighten as illustrated below.

Propane Gas
Setting air shutter: Loosen screw to adjust and re-tighten afterwards.

Natural Gas
Setting air shutter: Loosen screw to adjust and re-tighten afterwards.
Install Plinth Support Bracket
Install the plinth support bracket hooking it up to the stiffener bracket located behind the front panel, as shown.

Install Trim and Barrier Screen
Install the trim on the fireplace. Install as well the barrier screen which is provided with the trim.
Show the customer how to remove the barrier screen to access the controls.
Follow the instructions provided with the trim and leave those instructions behind for the customer’s further reference.

Install Remote Control Handset Wall Holder
The remote control kit for this fireplace comes complete with a wall-mounted holder. This holder is not required in all installations but is provided as an optional feature for those customers who wish to mount the remote handset to the wall.
To install the holder to the wall, find a convenient location and use the hardware provided with the kit. See the diagram below for required hardware and configurations. Note that the holder can be installed at the base of a light switch plate.
**IMPORTANT.** The location of the remote control handset is important to assure proper temperature regulation. To obtain a constant temperature, we recommend that the handset should be between 3 and 15 feet away from the appliance **but not directly above it.** We also advise that the handset should be located away from any other heat source and not in direct sunlight as this may affect the temperature sensor located in the remote handset.

### Notes:
1. Follow instructions supplied with each manufacturer’s components.
2. Unless otherwise specified, all the parts and assemblies from the above table are to be used with 4” x 6-5/8” pipes.
3. Do not mix components from different vent manufacturers.
4. Termination caps manufactured by RLH Industries or American Metal Products are from Homestyle Chimney Collection and can be ordered in one of the following finishes: a) aluminium; b) black powder coated; c) solid copper.
State of Massachusetts Carbon Monoxide Detector/Vent Terminal Signage Requirements

For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontally vented gas fueled equipment, the installing plumber or gas fitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gas fitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontally vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.

   a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with an alarm and battery back-up may be installed on the next adjacent floor level.

   b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, “GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS”.

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

   (b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

   1. The equipment listed in Chapter 10 entitled “Equipment Not Required To Be Vented” in the most current edition of NFPA 54 as adopted by the Board; and

   2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

   1. Detailed instructions for the installation of the venting system design or the venting system components; and

   2. A complete parts list for the venting system design or venting system.
(d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies “special venting systems”, the following requirements shall be satisfied by the manufacturer:

1. The referenced “special venting system” instructions shall be included with the appliance or equipment installation instructions; and

2. The “special venting systems” shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.
Warranty

1. Extended Warranty Coverage
For a period of up to ten (10) years, Miles Industries Ltd., (the “Company”) or its appointed distributor will at its option pay the initial owner for the repair of, or will exchange the following parts or components which are found to be defective in material or workmanship under normal conditions of use and service:

<table>
<thead>
<tr>
<th>Part or Component</th>
<th>Defect Covered</th>
<th>Maximum Warranty Period</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exterior steel casing</td>
<td>Corrosion</td>
<td>10 years</td>
</tr>
<tr>

<td>10 years</td>
</tr>
<tr>
<td>Cast iron parts</td>
<td>Corrosion</td>
<td>10 years</td>
</tr>
<tr>
<td>Firebox and heat exchanger</td>
<td>Corrosion (but not discoloration) causing loss of structural integrity</td>
<td>10 years</td>
</tr>
</tbody>
</table>

2. Two-Year Parts Warranty
In addition, for two (2) years from the date of purchase, the Company, at its option, can repair or exchange all parts and components not listed above but that are found to have a bona fide defect in material or workmanship under normal conditions of use.

3. Conditions and Limitations
a) The warranty registration card must be completed by the initial owner and returned to the Company within 90 days of purchase. Alternatively, the warranty registration form may be filled out online at www.valorfireplaces.com.

b) Installation and maintenance must be performed by an authorized and trained dealer in accordance with the Company’s installation instructions.

c) This warranty is void where installation of the unit does not conform to all applicable codes including national and local gas appliance installation codes and building and fire codes.

d) The owner must comply with all operating instructions.

e) The Company is not responsible for the labor costs to remove defective parts or re-install repaired or replacement parts.

f) The initial owner of the unit will be responsible for any shipping charges for replacement parts as well as travel time incurred by the dealer to perform the warranty work.

g) This warranty applies to non-commercial use and service and is void if it is apparent that there is abuse, misuse, alteration, improper installation, accident or lack of maintenance to the unit.

h) This warranty does not cover damage to the unit due to:
   i) Improper installation, operational or environmental conditions.
   ii) Inadequate ventilation in the area or competition for air from other household equipment or appliances.
   iii) Chemicals, dampness, condensation, or sulphur in the fuel supply lines which exceeds industry standards.

i) This warranty does not cover glass, log breakage or damage to the unit while in transit.

j) The Company does not allow anyone to extend, alter or modify this warranty and assumes no responsibility for direct, indirect or consequential damages caused by the unit. State or provincial laws where the first purchaser or user resides may provide specific rights to extend this warranty and, if so, the Company’s sole obligation under this warranty is to provide labor and/or materials in accordance with those laws.

4. Discharge of Liability
After two (2) years from the date of purchase, the Company may, at its option, fully discharge all obligations under this warranty by paying to the first owner the wholesale price of any defective parts.

5. No Other Warranty
All obligations to repair this unit are defined in this warranty. Some states or provinces may specifically mandate additional warranties on the part of manufacturers, but in the absence of such specific legislation, there is no other warranty or obligation expressed or implied.
