DANGER

Hot glass will cause burns.
Do not touch glass until cooled.
Never allow children to touch glass.

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and must be installed for the protection of children and other at-risk individuals.

WARNING:
FIRE OR EXPLOSION HAZARD

Failure to follow safety warnings exactly could result in serious injury, death, or property damage.

Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

WHAT TO DO IF YOU SMELL GAS

▪ Do not try to light any appliance.
▪ Do not touch any electrical switch; do not use any phone in your building.
▪ Leave the building immediately.
▪ Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
▪ If you cannot reach your gas supplier, call the fire department.

Installation and service must be performed by a qualified installer, service agency or the gas supplier.
This appliance may be installed in an after-market permanently located, manufactured (mobile) home where not prohibited by local codes. This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

INSTALLER: Leave this manual with the appliance.
CONSUMER: Retain this manual for future reference.

Massachusetts:
The piping and final gas connection must be performed by a licensed plumber or gas fitter in the State of Massachusetts. Also, see Carbon Monoxide Detector requirements in the fireplace installation manual.

⚠️ WARNING
This product can expose you to chemicals including Benzene, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

Note: Natural gas, in its original state, contains Benzene.

This appliance is a domestic room-heating appliance. It must not be used for any other purposes such as drying clothes, etc.

This appliance is suitable for installation in a bedroom or bed sitting room.

This manual contains instructions to install the ENGINE ONLY. A trim kit is REQUIRED to complete the installation. A barrier screen is provided with the trim kit. Refer to the manual supplied with the trim for installation.

The information contained in this manual is believed to be correct at the time of printing. Miles Industries Ltd. reserves the right to change or modify any information or specifications without notice. Miles Industries Ltd. grants no warranty, implied or stated, for the installation or maintenance of your heater, and assumes no responsibility for any consequential damage(s).

Fireplace Safety

This manual contains very important information about the safe installation and operation of the fireplace. Read and understand all instructions carefully before installing and operating the fireplace. Failure to follow these instructions may result in possible fire hazard and will void the warranty.

Replacement manuals are available by contacting the Valor Customer Service at 1-800-468-2567, or by visiting valorfireplaces.com.

⚠️ WARNING: Extremely Hot!

Heat and flammability

• Some parts of the fireplace are extremely hot, particularly the glass windows. Use the barrier screens provided or a gate to reduce the risk of severe burns.

• The glass windows can exceed 500°F (260°C) at full capacity.

• Always keep the appliance clear and free from combustible materials, gasoline, and other flammable vapors and liquids.

• Be aware of hot wall surfaces! The walls directly above the fireplace can get very hot when the fireplace heats. Although safe, it may reach temperatures in excess of 200°F (93°C) depending on choice of optional accessories. Do not touch!

• Be aware of hot hearth/floor surfaces! Any projections directly around the fireplace can get very hot when the fireplace heats. Although safe, they may reach temperatures in excess of 200°F (93°C) depending on elevation of hearth. Be careful of touching these! Temperature of projection surfaces will be reduced when barrier screens are installed.

• Some materials or items, although safe, may discolor, shrink, warp, crack, peel, and so on because of the heat produced by the fireplace. Avoid placing candles, paintings, photos and other combustible objects sensitive to heat or furniture within 36 inches (0.9 m) around the fireplace.

• Due to its high temperatures, the appliance should be located out of traffic areas and away from furniture and draperies.

• Any safety screen, guard, or barrier removed for servicing an appliance must be replaced prior to operating the appliance.

• Children and adults should be alerted to the hazards of high surface temperature and should stay away to avoid burns or clothing ignition.

• Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children, and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at-risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children, and other at-risk individuals out of the room and away from hot surfaces.

• A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.

• Clothing or flammable material should not be placed on or near the appliance.
Fireplace Safety

Glass windows

⚠️ WARNING
Do not operate this appliance with the glass front removed, cracked, or broken. Replacement of the glass front should be performed by a licensed or qualified service person. Do not strike or slam the glass front.

• The glass front assemblies must be in place and sealed before the unit can be placed into safe operation.

• The glass front assemblies must only be replaced as complete units, as supplied by the fireplace manufacturer. No substitute material may be used.

• Do not use abrasive cleaners on the glass front assemblies. Do not attempt to clean the glass when it is hot.

Venting

• This unit must be used with a vent system as described in this manual. No other vent system or components may be used.

• Never obstruct the flow of combustion and ventilation air. Keep the front of the appliance clear of all obstacles and materials for servicing and proper operation.

• This gas fireplace and vent assembly must be vented directly to the outside and must never be attached to a chimney serving a separate solid fuel burning appliance. Each gas appliance must use a separate vent system. Common vent systems are prohibited.

Intended use

• This appliance is designed and approved as a supplemental heater and provides the potential for most energy conservation when used while attended. The use of an alternate primary heat source is advisable.

• This unit is not for use with solid fuel.

• Do not use this heater as a temporary source of heat during construction.

Installation and Servicing

• Installation and repair should be done by a qualified service person. The appliance should be inspected before use and at least annually by a professional service person. More frequent cleaning might be required due to excessive lint from carpeting, bedding material, et cetera. It is imperative that control compartments, burners, and circulating air passageways of the appliance be kept clean.

⚠️ WARNING
Do not operate this appliance with the glass front removed, cracked, or broken. Replacement of the glass front should be performed by a licensed or qualified service person. Do not strike or slam the glass front.

HeatShift System:
Do not cover or place items in front of or above outlet(s)!
Specifications

Approval & Codes
This appliance is certified to ANSI Z21.88 / CSA 2.33 American National Standard / CSA Standard for Vented Gas Fireplace Heaters for use in Canada and USA, and to CGA 2.17-91 High Altitude Standard in Canada. This appliance is for direct vent installations.

This appliance complies with CSA P.4.1-15 Testing method for measuring annual fireplace efficiencies. The installation must conform to local codes or, in the absence of local codes, with the National Fuel Gas Code, ANSI Z223.1/NFPA 54 or the Natural Gas and Propane Installation Code CAN/CGA-B149.1. Only qualified licensed or trained personnel should install this appliance.

This appliance must be electrically grounded in accordance with local codes, or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70 or the Canadian Electrical Code, CSA C22.1.

*High Altitude Installations
Input ratings are shown in BTU per hour and are certified without deration for elevations up to 4,500 feet (1,370 m) above sea level.

For elevations above 4,500 feet (1,370 m) in USA, installations must be in accordance with the current ANSI Z223.1 and/or local codes having jurisdiction. Heating value of gas in some areas is reduced to compensate for elevation—consult your local gas utility to confirm.

For installations at elevations above 4,500 feet (1,370 m) in Canada, please consult provincial and/or local authorities having jurisdiction.

Supply Gas
Heater engine 1800KN uses natural gas.
Heater engine 1800KP uses propane gas.
The supply pressure must be between the limits shown in the Ratings section.
The supply connection is 3/8” NPT male and located on the left hand side of the firebox. A shut-off valve (not supplied) is required on the supply line to isolate the unit during service. See Gas Supply Installation section for details.

Conversion Kits
The 1800K are supplied as natural gas or propane gas and are field convertible between fuels. See instructions packaged with the conversion kits for further information.

Electrical
The 1800K are designed to run on battery power and do not require an electrical power source to operate as a heater. However, they require electrical power to operate optional 1595CFKV2 Circulating Fan Kit, GV60WIFI WiFi Kit or 1270RBK Remote Blower Kit.

HeatShift™System
The 1800K are designed to allow the installation of the optional HeatShift System, a convection system that redistributes the warm air flow away from the fireplace opening to a more desirable location using natural convection, without use of a fan.
The warm air flow may be relocated to a position higher up the wall, out the sidewalls, or even to another room. The result is much cooler wall temperatures above the fireplace opening for locating televisions, artwork, etc.
Please note that the framing and mantel clearances are affected by the installation of the HeatShift System. Refer to “Appendix D—HeatShift™System™” on page 67 for more information.

Outdoor Conversion Kit
The 1800K models are supplied standard for indoor applications and may be adapted for installation in specific “outdoor” applications protected from weather as defined in the GV60CKO outdoor conversion kit manual.

Installation Planning

1. YOU NEED TO KNOW FROM THE HOMEOWNER:
   • Will optional HeatShift System* be used;
   • Height of appliance and shelf, if used;
   • Thickness and type of wall finish around appliance;
   • Trim used*;
   • Other optional accessories used (if any);
   • Venting configuration.

2. Unpack the appliance, removing all items packed inside and around it. Recycle the packaging.

3. Check that you have everything, using the Pack Content sheet. Also, check that you have:
   • Fuel bed (packed separately);
   • Liner panels (packed separately);
   • Remote Battery and Wall Switch Kit;
   • HeatShift System components (if used);
   • Gas conversion kit (if necessary);
   • Venting accessories;
   • Electrical accessories (if used).

4. Carefully read the Installer’s Checklist included with the fireplace for the installation sequence.

Caution
Only qualified, licensed, or trained personnel should install this appliance.

WARNING
*HeatShift System MUST be installed on this appliance when using 1830CIK—Clean Installation Kit!
Installation Planning

Note: This appliance may be installed in outdoor, weather protected environments as defined in the GV60CKO Outdoor Conversion Kit instruction manual.

- Remote Handset wall holder
- Surround Plate with Barrier Screen (required)
  Narrow 1” Trim 1875LFB and wider 3-1/2” steel Trim 1850 adjustable, accept additional non-combustible finish over cement board and behind trim. 1830CIK’s narrow trim requires HeatShift. Cement board finishes up to perimeter of trim. Note: 1830CIK installs before cement board.
- Wall Finish
  Any wall finishes applied over cement board must be non-combustible. Combustible mantel are ok provided they conform to chart on page page 11.
- Hearth: not required. If used, must be minimum 4” below fireplace opening unless using HeatShift (see “Appendix D—HeatShift System” on page 67).
- Combustible Floor
- Combustible Framing Allowed Beneath Fireplace. When the appliance is installed directly on carpeting, tile or other combustible material other than wood flooring, the appliance shall be installed on a metal or wood panel extending the full width and recessed depth of the appliance.

1/2 inch thick non-combustible cement board—NOT supplied

Supplied as vertical outlet, SHOULD NOT be field converted to horizontal outlet. Note - Minimum 24” vertical rise required right at appliance.

Optional HeatShift System outlets (4)—Required with 1830CIK

Remote Battery and Wall Switch Kit (required) (35-foot wire length) (supplied)

1800K heater

Electrical junction box to connect power when using optional fan, WiFi

WARNING

Some materials or items, although safe, may discolor, shrink, warp, crack, peel, and so on because of the heat produced by the fireplace. Avoid placing candles, paintings, photos, and other items sensitive to heat around the fireplace.

WARNING

HOT WALL SURFACES! The wall directly above the fireplace is constructed of non-combustible materials and, although safe, it may reach temperatures in excess of 200°F (93°C) depending on choice of trims. Do not touch. Finish wall using materials suitable for these temperatures.
NOTE
Use for the optional HeatShift System affects mantel and hearth clearances. See HeatShift section in Appendix D of this manual.

WARNING
HeatShift System MUST be installed on this appliance when using 1830CIK—Clean Installation Kit!

Fireplace Opening

PARTIAL SHELF, top outlet
Venting Considerations—Vertical Takeoff

*Notes—ALL venting considerations

- Dimensions of venting are based on using Dura-Vent elbows. Elbow curve radius dimensions will vary when using other brands. In general, other brands have slightly bigger radius.
- Minimum 24 inches vertical pipe section required right at unit. Refer to venting chart on page 30 for allowable horizontal runs.

- 3 inches clearance to combustibles required above horizontal pipe. Slope horizontal pipe upwards 1/4 inch per foot. 1 inch clearance required around sides and bottom of horizontal pipe and around vertical pipe.
- When calculating effective pipe lengths subtract approximately 1-1/2 inch for pipe joint - for example, a 12 inches pipe section will add approximately 10-1/2 inches overall.
Installation Planning

Material Specifications

Non-Combustible
Material which will not ignite and burn. Such materials are those consisting entirely of steel, iron, brick, tile, concrete, slate, glass or plasters, or any combination thereof.
Materials that are reported as passing ASTM E 136, Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750°C shall be considered non-combustible materials.

Combustible
Materials made of or surfaced with wood, compressed paper, plant fibers, plastics, or other material that can ignite and burn, whether flame proofed or not, or plastered or unplastered shall be considered combustible materials.

Non-Combustible Cement Board
The L3 Linear fireplace requires a 1/2” (13 mm) thick non-combustible cement board to be used as a wall surface immediately surrounding the unit’s opening—see diagram for minimum coverage.
Extending the cement board well beyond the minimum shown will help avoid cracking due to differential expansion of materials.
Pre-drill cement board with oversized holes and do not over-tighten screws to avoid cracking due to heat expansion.
Standard gypsum wall board may be used beyond the perimeter of the cement board.

Minimum coverage area of non-combustible cement board. Any wall finish applied to shaded area must be non-combustible.

Non-combustible cement board required thickness: 1/2 inch (13 mm)

Wall Finish

Installation Planning

Non-Combustible Finishing Over Cement Board
Additional non-combustible material such as tile, etc., may be applied over top of the cement board or you may choose to leave it finished clean with no tile, etc. Be aware that a trim is always required. Finish **should not cover** the trims.

1875 and 1850 Trims
Only the 1875 and 1850 style trims will accept tile, etc. tucked behind them (up to 5/8” thick for the 1875 and up to 1 inch thick for the 1850).

1830 Trim
1830 trim must be installed **BEFORE** cement board. Cement board and finishes are applied to the perimeter of the trim frame. Cement board and finish **CANNOT** be tucked under this trim.
Avoiding Cracking Wall Finishes
We recommend installing the optional HeatShift System to reduce the wall temperatures and minimize the possibility of cracking wall finishes.

\[ \text{WARNING} \]

HeatShift System MUST be installed on this appliance when using 1830CIK—Clean Installation Kit.

If a clean finish with no tile, etc. is desired, joints in the cement board and the transition to gypsum board will require special attention if future cracking is to be controlled. Be aware that temperatures on the non-combustible wall surface above the appliance can exceed 200°F (93°C).

Below are some tips on how to best avoid any cracking:
• Allow materials to dry thoroughly before finishing the wall. Cement board has the ability to absorb up to 30 percent of its weight in water and may shrink as much as 1/8” over a 48” length when drying from a saturated condition. Running the fireplace for an extended period before final finishing will help drive out moisture.
• Always pre-drill screw holes through cement board and use screws specific for material used.
• Always use mesh tape over joints.
• Always stagger joints in wall board.
• Behind joints, double up studs or use studs “on the flat” to add extra support to the joint. Adhesive on the backside of wall board behind any joints can help control differential movement.
• Use multiple, thinner coats of joint compound and allow to dry thoroughly between coats.
• Ensure framing materials are dry.
• After finishing the wall, introduce heat gradually to slowly dry any excess moisture rather than drying too fast.
• Avoid notching cement board or tiles around corners of window opening and instead provide a joint that intersects the corner.
• Avoid using large one-piece slab of material with a cut-out in the middle as a surround for the fireplace. Expansion above the opening will cause cracking at inside corners. Provide a joint that intersects the inside corner to avoid cracking.
Venting

Top Outlet
This unit is supplied with a top vent outlet which should not be field-converted to a rear vent outlet. See “How to Read the Venting Chart” on page 21 for more information.

Vent Material
This unit is approved for installation using 4 x 6-5/8 inches co-axial direct vent pipe and accessories as listed in the Approved Venting Components section on page 54 of this manual. Follow the installation instructions supplied with the individual venting accessories.

Vent Sealing
Seal all outer coaxial pipe and elbow joints, including sectioned elbow joints, using high quality, high temperature 2 inch wide self-adhesive aluminum foil tape (Nashua-322-2 brand or similar). Wrap the tape completely around all joints and press firmly to seal.
A high temperature black silicone sealant may be used in the outer joints as a substitute to foil tape.
Ensure all the pipe joints have a minimum of 1 ¼ inch overlap.

Wall Thickness
The appliance vent is suitable for penetrating a combustible wall assembly up to 8 inches in thickness. A non-combustible wall can be of any thickness up to the maximum horizontal run of vent pipe allowed for the particular installation.

Framing Vent in Combustible Walls & Ceilings
When penetrating through combustible walls and ceilings, frame a minimum of 10 in x 10 in opening and ensure that the insulation is kept clear of the vent pipe using either a wall thimble or an attic insulation shield. Follow the installation instructions supplied with the individual venting components.

Important Installer Notice – Weather Sealing & Vapor Barriers
It is the installer’s responsibility to ensure that vent installations through exterior walls are caulked and weatherproofed in such a manner as to:
• Prevent rain water from entering the wall from the weather side by adequately caulking the outer vent plate to the exterior wall surface.
• Prevent moisture inside the home from penetrating into the wall structure by ensuring the inside wall plate is adequately sealed to the inside vapor barrier.
• Prevent rain water and moisture from entering the walls by sealing the joints between the outer vent tube and the inner and outer wall plates.
We recommend the use of a high quality polyurethane sealant.

All horizontal pipe runs must be graded 1/4 inch per foot upwards in the direction of the exhaust flow. The final pipe length, when terminating through the wall may be graded downwards slightly to prevent water migration.
Typical Co-axial Venting Components
How to Read the Venting Chart

The chart below applies to co-axial roof or wall termination.

1. A minimum vertical rise of 24 inches is required directly off the unit or after first elbow, as shown.
2. The total length of the vent pipe cannot exceed 40 feet.
3. The minimum vertical height with roof termination is 6 feet.
4. Any combination of rise and run can be used as long as they are within the allowable limits shown on the chart below.
5. A maximum of 4 x 90 degrees elbows—or equivalent (2 x 45 degrees = 90 degrees)—can be used. Excludes the 45 degrees take-off elbow shipped with the appliance.
6. Each 90 degrees elbow installed on the horizontal plane is equivalent to a 3 feet horizontal pipe; therefore, 3 feet must be subtracted from allowable horizontal run. (45 degrees elbow is equivalent to 18 inches horizontal pipe.)
7. All horizontal pipe runs must be graded 1/4 inch per foot upwards in the direction of the exhaust flow. The final pipe length, when terminating through the wall may be graded downwards slightly to prevent water migration.
8. A restrictor adjustment is required for most installations having a vertical rise—see “Restrictor Settings” on page 22.

Note: The restrictor is shipped installed at the exhaust exit of the firebox.

Venting Chart

Example 1

- **V Value** = V1 (4') + V2 (3') + V3 (2') = 9'
- **H Value** = H1 (2') = 2'
- Restrictor position # 1 required

---

**Allowable Co-Axial Vent Configurations with restrictor positions**

- Example 1: V Value = V1 (4') + V2 (3') + V3 (2') = 9'
- H Value = H1 (2') = 2'
- Restrictor position # 1 required

---
Restrictor Settings
The restrictor is located in the roof of the firebox hidden above the top liner panel. Adjust the restrictor before installation of the top liner panel. Should subsequent adjustment be required, you will need to remove the top liner panel—see “Liners” on page 32.

**MOST INSTALLATIONS REQUIRE A RESTRICTOR** for improved flame picture and performance. This unit is supplied with a pre-fitted restrictor having four different positions or settings. The restrictor is shipped mounted at the maximum open position which is used for rear venting with no vertical rise. The level of restriction required depends on the vertical rise in the venting system and, to a lesser degree, the horizontal run and number of elbows.

The amount of restriction is based on laboratory tests. The ideal restrictor position may vary slightly, especially when the vent pipe length is near the limits of the acceptable configurations for each type of restrictor.

The chart on the previous page shows the vent restrictor required relative to the length of the vent pipe.

To set the restrictor position:

1. Establish the required position of the restrictor looking up the venting table on the previous page.
2. Release the screws (2) on each side of the restrictor already installed on the firebox roof port.
3. Slide the restrictor in the required position.
4. Tighten the screws.
**Venting**

**Horizontal Vent Termination Location**

- The vent terminal must be located on an outside wall or through the roof.
- This direct vent appliance is designed to operate when an undisturbed airflow hits the outside vent terminal from any direction.
- The minimum clearances from this terminal that must be maintained when located on an outside wall are shown in figure below. Any reduction in these clearances could result in a disruption of the airflow or a safety hazard. Local codes or regulations may require greater clearances.
- The vent terminal must not be recessed into a wall or siding.
- The vent terminal should be positioned where any snowdrifts will not cover it.
- Sidewall vent terminations require a terminal guard such as 658TG or 845TG when accessible—within 7’ of ground.

**Installation**

**Unpack Appliance**  
*Beware of sharp edges! Wear gloves!*

1. Remove the cardboard wrapping and the wood pallet from the appliance and discard.  
2. Unpack any loose items from around the appliance.  
3. Remove the window and set aside in a safe place to avoid damage—see "Remove Window" on page 26.  

4. **Verify that you have all the components required for the installation, including:**
   - approved cement board;  
   - liners and fuel bed (in separate cartons);  
   - trim kit with barrier screen;  
   - venting components and accessories;  
   - optional HeatShift system if used;  
   - electrical components if installing optional fan or WiFi.

**Fit Standoffs**

The standoffs are supplied flat on the firebox top and fixed at one end. Swivel up the flat standoffs, bend them as shown and fix the loose end to the top of the firebox.

**Fit Appliance into Framing**

1. Remove the 4 screws retaining the engine to its pallet.  

2. Taking great care not to cut your hands on the sheet metal edges, lift the appliance out of its packing base and place it in the framing. **Make sure that the unit is at the right height with consideration to the height of the hearth or combustible flooring.**  

3. Fold out four mounting tabs and recess the appliance in the framing as shown.  

4. Fasten the unit to framing using 4 screws or nails at the mounting tabs. **Note:** The sheet metal front face of the appliance is flush with the framing studs.
Remove Window
The window is held in place by a spring-loaded lever on each side.

1. To remove the window, locate the levers on each side of the window towards the top. Using your finger, pull the lever towards you and unhook it from the window frame bracket.
2. Gently pull the top of the window outward.
3. Lift the window out of its bottom railing and set it aside in a safe place to avoid damage.
Installation

ONLY when using HeatShift System

Install HeatShift Take-Off Collars to Appliance

1. Remove the four cover plates on top of the appliance case (6 screws each).

2. Install the take-off collars on the holes on top of the appliance's case (6 screws each).

HeatShift™ System—if used

Remove Convection Baffle

To be effective, the HeatShift system requires that an internal convection baffle located above the firebox inside the appliance case be removed to allow the hot air flow to convect upwards into ducts installed on the fireplace.

Remove the convection baffle from the appliance. It is held in place by 3 screws located right behind the upper edge of the fireplace opening. Recycle this panel as it is no longer needed.

See “Appendix D—HeatShift System” on page 67 for more details regarding the installation.

WARNING

All FOUR (4) takeoffs MUST BE CONNECTED TO PLENUM(S).

WARNING

The Linear fireplaces requires the removal of the internal convection baffle for the HeatShift system to function properly—read instructions carefully!
**Installation**

**Install Electrical Wiring (if required)**
This section provides information to install the electric pre-wiring required for use with the optional 1595CFKV2 Circulating Fan Kit and/or the GV60WIFI WiFi Kit.

All wiring must be done by a qualified electrician in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70 or the Canadian Electrical Code, CSA C22.1.

**Electrical Requirements**
1595CFK—120 VAC, 60 Hz, less than 1 amp
GV60WIFI—6 VDC (from receiver), less than 1 amp

**General Requirements**
Both optional 1595CFK and GV60WIFI kits require a GV60VM power supply (known as a V-Module), which includes a three-prong grounded plug to plug into a grounded receptacle installed within the fireplace enclosure by a qualified electrician.

The receptacle, housing, and strain relief are supplied and installed as part of the fireplace.

**Notes**
- We recommend connecting the electrical box even if the optional accessories have not been purchased. It is much easier to wire before wall finish is applied.
- Wiring within the receptacle enclosure must have a minimum 90°C temperature rating.
- Wire nuts not included.

**Installation**
1. Locate the electrical housing. It is behind the front panel of the fireplace in the bottom right corner.

2. Remove the inner cover (2 screws).

3. Pull the inner cover and receptacle (attached) out of the fireplace.
Installation

4. Thread the cable through the stud and the strain relief in the fireplace case. **Do not tighten the clamp yet.** Pull as much wire through the case as you need to wire the receptacle outside the case.

5. Strip wire and terminate grounded receptacle using wire nuts (not included). Place the connected receptacle back in the fireplace, and pull excess cable back through the strain relief.

6. Place the inner cover and receptacle in position and replace 2 screws.

7. Leave your desired cable slack in the electrical box, and tighten the strain relief cable clamp outside of fireplace casing and secure and excess wire to framing.
Replace the Bypass Screw (if using 1800SWK—Splitwood Kit ONLY)
You can access the bypass screw on the valve through the hole in the lower front panel of the appliance when the wall finish is not applied. Otherwise, the burner module must be removed from the appliance.
Remove and replace the minimum rate bypass screw from the valve with the bypass screw supplied with the 1800SWK. The screw has a rubber o-ring holding it into the valve body and may require prying out or removing the screw with needle nose pliers.

There are two bypass screws included in the 1800SWK kit. The number is stamped on the screw. Use the correct screw for your fuel type:
- #185 - for natural gas
- #170 - for propane gas

Set-up Gas Supply
The gas supply inlet connection is a 3/8” NPT male connector located on the left hand side of the firebox.

The unit is supplied with a stainless steel flex line to allow the appliance to be disconnected for service. An individual shut-off valve (not supplied) is required on the supply line ahead of the flex connector.
Use only new black iron, steel pipes, CSST, copper tubing, or corrugated stainless steel tubing if acceptable—check local codes. Note that in USA, copper tubing must be internally tinned for protection against sulfur compounds.
Unions in gas lines should be of ground joint type.
The gas supply line must be sized and installed to provide a supply of gas sufficient to meet the maximum demand of the appliance without undue loss of pressure.
Sealant used must be resistant to the action of all gas constituents including LP gas. Sealant should be applied lightly to male threads to ensure excess sealant does not enter gas lines.
Installation

Pressure test the supply line for leaks.
The appliance and its individual shut-off valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig (3.5 kPa).
The appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.5 kPa).
Failure to either disconnect or isolate the appliance during pressure testing may result in regulator or valve damages and void the warranty. Consult your dealer in case of damages.

Pressure Test Points
The minimum supply pressure is given in the section “Specifications” on page 6.
All piping and connections must be tested for leaks after installation or servicing. All leaks must be corrected immediately.
When testing for leaks:
• Make sure that the appliance is turned off.
• Open the manual shut-off valve.
• Test for leaks by applying a liquid detergent or soap solution to all joints. Bubbles forming indicate a gas leak.

Caution
Never use an open flame to check for leaks! Correct any leak detected immediately.

The pressure test tapping locations are shown in the figure at right. An internal regulator within the valve controls the burner manifold pressure. The correct pressure range is shown in the table in section “Specifications” on page 6. The pressure check should be made with the burner alight and at its highest setting. See “Appendix A—Lighting Instructions” on page 58 for full operating details.
Installation

Liner Installation - 1815FBL

The Fluted Black Liners (1815FBL) install in the manner outlined below. For the 1825RGL Reflective Glass Liners and the 1840SSL Stacked Stones Liners, see instructions supplied with those liners.

Unpack the liner panels carefully.

1. Inside the firebox, on the top of each side, release the screw of the side panel anchors (one per side) just enough to allow them to rotate.

2. Place the right end panel against the right wall of the firebox and secure it with the anchor.

3. Install the left end panel in the same manner.

4. The rear panel is supplied in three sections which overlap each other. The two outer sections are identical and overlap the center section.

   e) Identify the right side outer section. From the middle of the firebox, insert the section upwards behind the top railing and place it on the ledge above the ports. Slide the section sideways to the right into position, behind the tabs, as far as possible.
Installation

f) Identify the left side outer section. Like the right one, insert it from the middle of the firebox and slide it to the left, behind the tabs, as far as possible.

g) Insert the center section upwards behind the top railing and place it onto the ledge.

h) Pull back both side sections towards the middle to overlap the center one.

9. The top panel is supplied in two identical sections. The sections are beveled and the smooth black ‘fire side’ is notched at the front and straight at the back. When installed, the top panel rests on the front and back railings.

j) Insert one section of the top panel, smooth black surface down. Push the section on the left side as far as it will go—there is a stop tab at the left end of the railings.

k) Insert the second section in the same manner. Push it against the first section and ensure there is no gap between the sections.

NOTE: If gapping occurs between each section of the rear panel, a lift tab located on each end of ledge can be bent by hand to close the gap.
Installation

Driftwood Log Kit 1800DWKV2

Materials Required
1800DWKV2 Driftwood Log Kit, which contains:
• 8 Driftwood logs
• 10 pebbles of assorted colors
• 1 bag of beige vermiculite
• Left and right hand platforms
**Installation**

**Installation**
The following instructions show the best positions for the logs and other pieces to obtain the best fire.

1. Place left and right sides platform around the burner as shown (note pilot light cutout). The platform rests in place and is not screwed down. The openings go underside.

2. Place log L15 on the rear corner of the burner. A cutout under the log helps place it.

3. Place log L16 on top of L15, across the burner, to the front of the media platform as shown.

4. Place log L17 on top of the pilot shield, across the burner, to the front of the media platform as shown.

5. Place the pin on log L18 into the hole on the rear media platform. Place L18 over the burner to the front of the media platform as shown.

6. Place log L19 on top of L18 as shown. Rest the other end on the front of the media platform.
Installation

7. Place log L22 on the rear corner of the burner. A cutout under the log helps place it.

8. Place log L21 on top of L22, resting on the front of the media platform.

9. Place log L20 on the rear of the media tray, between L18 and L22.

10. Place vermiculite by hand (do not pour vermiculite as the bag contains dust particles that could block the burner ports) and cover the burner, and onto the surrounding media tray as well.

11. Place pebbles on the vermiculite to your preference.

IMPORTANT: Approved for use only with vermiculite provided with your Valor fireplace. The use of any other products may void your fireplace warranty.

WARNING
Choking Hazard! Ensure that the fireplace area is clear of vermiculite particles as these could be ingested by small children. Vacuum area after installation.

Finished Assembly
Installation

Decorative Glass Murano Kit 1800DGMV2

Materials Required
1800DGMV2 Decorative Glass Murano Kit, which contains:
- 6-piece glass platform
- 4 sheet metal runners
- 2 sheet metal cross runners
- 2 bags of clear fireglass

Installation
Carefully unpack the kit.
1. Install the 4 sheet metal runners around the burner. The open end of the runners are oriented toward the middle and the bags at the bottom. The tabs fit into the slots of the burner supports.

2. Install the sheet metal cross runners at each end of the assembly, linking the front and rear runners by inserting the cross runners tabs into the slots of the runners.

3. Place the glass pieces as shown, smooth side up, on the runners. All around the runners, vertical tabs keep the glass pieces together. Note that the rear glass pieces are narrower than the front pieces.
4. Carefully place, by hand, the fireglass on the surface of the burner patting it gently to form a single layer to the approximate level of the top edge of the flange around the burner. Do not pour from the bag or put too much to avoid blocking the burner ports.

5. Some fireglass may be added on the platform to cover the edge of the burner.

Note: Ensure the area within the pilot shield is clear of fireglass.

**WARNING**

Choking Hazard! Ensure that the fireplace area is clear of fireglass particles as these could be ingested by small children. Vacuum area after installation.
Installation

Splitwood Kit 1800SWK

Materials Required
1800SWK Splitwood Log Kit, which contains:
• 12 Splitwood logs
• 4 bags of coal embers
• 1 bag of grey splinters
• 2 Bypass screws (see page 30 for installation instructions)
• Left and right hand platforms

Installation—Hardware
1. Install bypass screws as required. See page 30 for instructions.
2. Place left and right sides platform around the burner as shown (note pilot light cutout). The platform rests in place and is not screwed down. The openings go underside.

Installation—Logs
The following instructions show the best positions for the logs and other pieces to obtain the best fire.
1. Place log 12 with the right angle cutout under the log around the rear left corner of the burner.
2. Place log 2 on top of 12, and across the burner to rest on the platform as shown.
Installation

3. Place log 3 at the front left corner of the burner.

4. Place log 13 with the pin inserted in the platform as shown.

5. Place log 5 on top of 13, across the burner with the pin inserted as shown.

6. Place log 14 on top of 5, onto the front platform.

7. Place log 17 across the burner with the pin in the hole in the front platform.

8. Place log 7 on top of 17 and onto the front platform.

9. Place log 9 across the burner with the pin in the hole as shown.

10. Place log 15 on top of 9 onto the rear platform.
Installation

11. Place log 16 with the right angle cutout under the log around the rear right corner of the burner.

IMPORTANT: Approved for use only with the ceramic embers and splinters provided with your Valor fireplace. The use of any other products may void your fireplace warranty.

12. Place log 11 on top of 16 to the front platform as shown.

WARNING
Choking Hazard! Ensure that the fireplace area is clear of embers / splinters as these could be ingested by small children. Vacuum area after installation.

13. Place embers by hand onto the burner. Do not pour embers as fine dust can block burner ports.

14. Place splinters in the embers.

Finished Assembly
Installation

Birch Log Kit 1800BLK

Materials Required
1800BLK Birch Log Kit, which contains:
• 12 Birch logs
• 1 bag of grey splinters
• 1 bag of mixed grey embers
• 2-piece metal platform

Note each log is stamped with its number only on the bottom to identify it.

Installation
The following instructions show the best positions for the logs and other pieces to obtain the best fire.
Note that logs that are placed across the burner are above the burner and do not touch it.

1. Place left and right sides platform around the burner as shown (note pilot light cutout). The platform rests in place and is not screwed down. The openings go underside.

Platform—left side
Platform—right side
2. Place log L2 with the pin in the hole behind the burner as shown.

3. Place log L1 from top of L2, across the burner to the front of the media tray.

4. Place log L5 with the pin in the hole behind the burner as shown, and the left end just behind the pilot shield.

5. Place log L4 from the top of L5, across the burner, to the front of the media tray.

6. Place log L3 on top of L4 and rest it on the front of the media tray.

7. Place log L8 with the pin in the hole behind the burner as shown.
Installation

8. Place log L7 on top of L8, across the burner, and resting on the front of the media tray.

9. Place log L6 on top of L7 and rest it on the front of the media tray.

10. Place log L9 on the rear media tray as shown. The log can rest just over the edge of the burner.

11. Place log L11 on the rear media tray as shown.

12. Place log L10 on top of L11, across the burner, and resting on the front of the media tray.

13. Place log L12 on the front of the media tray as shown.
14. Place embers and then splinters by hand (do not pour embers as the bag contains dust particles that could block the burner ports) and cover the burner. The embers can be placed onto the front media tray as well if preferred.

**IMPORTANT:** Approved for use only with the ceramic embers and splinters provided with your Valor fireplace. The use of any other products may void your fireplace warranty.

**WARNING**
Choking Hazard! Ensure that the fireplace area is clear of embers / splinters as these could be ingested by small children. Vacuum area after installation.
Installation

Refit and Check Window

1. Place the window in its bottom railing. Ensure to remove any vermiculite or glass particles in the railing before installing the window.

2. Push the top of the window frame against the firebox.

3. While you hold it, pull and hook the side levers back to the window brackets on each side.

4. Pull out top of window to ensure spring loaded levers work properly.

5. Apply firm hand pressure around the window frame to ensure the window is sealed tight against the firebox.

6. If the Hot Glass Warning plate has been removed from the front lower corner of the window, re-install it by sliding it between the glass and the frame as indicated.

WARNING

The window unit must be correctly installed, fastened and sealed after servicing or serious bodily injury and/or damage to the appliance may result.

To ensure a safe operation:

- Double-check that the bottom of the window frame is correctly installed in the bottom support railing;
- Verify that the levers are hooked properly to the window tabs then;
- Pull out the top of the window and release it to insure the springs return it;
- Ensure the window is sealed before operation.

WARNING

Failure to install the window correctly can:

- Leak carbon monoxide.
- Affect the performance of the fireplace.
- Damage components.
- Cause overheating resulting in dangerous conditions.

Damage caused by incorrect window installation is not covered by the Valor Warranty.
Install Remote Battery and Wall Switch Kit (required)
The Remote Battery and Wall Switch Kit is provided with this appliance. It connects to the receiver in the fireplace. The receiver is located under the firebox, left of the control valve. It is maintained in position with Velcro bands.

1. Pull out the receiver from its location to connect the battery holder and wall switch.
2. Feed the 'white connector end' of the harness assembly through side holes in fireplace liner body to receiver. Ensure sufficient harness length to allow for removal of receiver. Note - coil up any extra harness at fireplace end.
3. Connect switch to auxiliary 5-pin junction and power connection to jack.

4. Run harness assembly to mounted position of junction box, securing harness to framing using insulated staples (not included)
5. Feed harness assembly through a restrain on rear of junction box, feeding through until harness sheath is pinched by retainer and providing sufficient length to make connection to rear of switch and battery holder.
6. Secure junction box to the mounting surface using appropriate fasteners (not included)
7. Align molex connection on switch cable of harness assembly and connect to switch.

Caution
DO NOT PUT BATTERIES IN THE BATTERY HOLDER until the wires are connected to the burner control unit as short-circuit could result in the destruction of the electrical components.

Do not run the switch wire over the top of the firebox. Route the wire so it does not contact the firebox.
Installation

8. Mount switch plate to junction box with 2 long screws provided. Note: switch position left or right to suit homeowner wishes.

9. Locate and secure magnet plate using 2 ‘long’ screws provided

10. Place and secure cover plate to box using 4 screws provided

11. Feed cable tie through the 2 side slots of battery cover assembly.

12. Position battery holder to rear face and secure together with cable tie. Note clearance is required for battery snap connection.

13. Make the snap connection, load 4 AA alkaline batteries into holder (included with fireplace) then feed back into junction box assembly.
Note: Do not put batteries in the receiver, only in the battery holder by the wall switch.

14. Test the operation of the wall switch—see “Appendix C—Wall Switch Operation” on page 66.
Remote Control Initial Pairing

The receiver and the handset of the remote control system must be initially paired before the first use. (Note that batteries must already be installed in the wall mounted battery holder)

1. Insert two 1.5 V AAA alkaline batteries in the handset.
2. Locate the Reset button on the front side of the receiver.
3. With a thin object, press and hold the receiver’s RESET button until you hear one short and one long beeps. After the second beep, release the reset button.
4. Within the subsequent 20 seconds, press and hold the button on the remote handset for 2-3 seconds. will be displayed and flash on the handset during the pairing sequence. The handset will count up from 1 to 8, and you will hear two short beeps confirming the pairing is done.

If you hear one long beep, the pairing sequence has failed or the wiring is incorrect.

This is a one time pairing only and is not required when changing the batteries of the handset or battery holder. The remote control system is now ready to use.
Installation

Install Remote Control Handset Wall Holder
The remote control kit for this fireplace comes complete with a wall-mounted holder. This holder is not required in all installations but is provided as an optional feature for those customers who wish to mount the remote handset to the wall.

To install the holder to the wall, find a convenient location and use the hardware provided with the kit. Cover the screws with the included caps to finish the mounting.

Once mounted, the holder is magnetic - simply place the remote gently into the holder.

IMPORTANT: The location of the remote control handset is important to assure proper temperature regulation. To obtain a constant temperature, we recommend that the handset should be **between 3 and 15 feet away from the appliance but not directly above it**. We also advise that the handset should be located away from any other heat source and not in direct sunlight as this may affect the temperature sensor located in the remote handset.
Installation

Checking Operation

Turn the fireplace flame up and down using the remote control to confirm that the full range of inputs is achieved—see the remote control operation instructions in “Appendix B—Remote Control Operation” on page 59.

Adjusting Aeration

Light the fire and allow the unit to warm up for 10–15 minutes to evaluate the flame picture. The burner is equipped with an adjustable shutter to control primary aeration. The shutter is factory-set to an aeration gap which will give optimum performance for the vast majority of installations.

Depending of the fuel bed used, altitude and other considerations, the flame picture may be improved by adjusting the aeration. The need for adjustment should be determined only by operating the appliance with the fuel bed, panels and window installed and evaluating the flame picture after a 15-minute warm-up.

**Increasing aeration** will cause the flames to appear more transparent and blue showing more ceramic effects glow.

**Decreasing aeration** will cause the flames to appear more yellow or orange showing less ceramic effects glow.

**Too little aeration** may result in black carbon forming on logs or roof panel and dropping into the firebox.

Locating Aeration Control

Top view—Air shutter lever located under the firebox behind the front panel.
Installation

Install trim plinth support
Install the trim plinth support hooking it vertically on the stiffener bracket, as shown. The stiffener bracket is located just behind the front panel below the window.

Install Trim and Barrier Screen
Install the trim chosen by the customer for their fireplace. Install as well the barrier screen which is provided with the trim.
Show the customer how to remove the barrier screen to access the controls.
Follow the instructions provided with the trim and leave those instructions behind for the customer’s further reference.

1830CIK—Clean Installation Kit

WARNING
HeatShift System MUST be installed on this appliance when using 1830CIK—Clean Installation Kit.

If you are installing the 1830CIK Clean Installation Kit, you need to do it BEFORE the cement board.
1. Break off tabs from each corner of the fireplace’s front opening (9 tabs, 2 at each corner and 1 more at the top middle). Bend tabs back and forth to break them, or cut them with tin snips as indicated in the kit’s installation instructions.

2. Remove the internal convection baffle inside the appliance case, above the firebox. See “Remove Convection Baffle” on page 27

</table>

**Notes:**

1. Follow instructions supplied with each manufacturer’s components.
2. Unless otherwise specified, all the parts and assemblies from the above table are to be used with 4” x 6-5/8” pipes.
3. Do not mix components from different vent manufacturers.
4. Termination caps manufactured by RLH Industries or American Metal Products are from Homestyle Chimney Collection and can be ordered in one of the following finishes: a) aluminium; b) black powder coated; c) solid copper.
State of Massachusetts Carbon Monoxide Detector/Vent Terminal Signage Requirements

For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gas fitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gas fitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.

a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.

b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, “GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS”.

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

(b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

1. The equipment listed in Chapter 10 entitled “Equipment Not Required To Be Vented” in the most current edition of NFPA 54 as adopted by the Board; and

2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.
(c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

1. Detailed instructions for the installation of the venting system design or the venting system components; and

2. A complete parts list for the venting system design or venting system.

(d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies “special venting systems”, the following requirements shall be satisfied by the manufacturer:

1. The referenced “special venting system” instructions shall be included with the appliance or equipment installation instructions; and

2. The “special venting systems” shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.
FOR YOUR SAFETY, READ BEFORE LIGHTING

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This appliance has a pilot which must be lighted by hand, remote handset, or wall switch. Follow these instructions exactly. To save gas, turn the pilot off when not using the appliance for a prolonged period of time.

B. BEFORE LIGHTING, smell all around the appliance area for gas. Be sure to smell next to the floor because some gases are heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS

• Do not try to light any appliance.
• Do not touch any electric switch; do not use any phone in your building.
• Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
• If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to push in or turn the control knobs. Never use tools. If the knobs will not push in or turn by hand, don’t try to repair them; call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control, which has been under water.

LIGHTING INSTRUCTIONS

1. STOP! Read the safety information above.

2. TO CLEAR ANY GAS, turn main valve off by pressing Power button (◯) on handset (1).
   • Wait five (5) minutes to clear out any gas, then smell for gas, including near the floor. If you smell gas, STOP! Follow “B” in the safety information above on this label. If you don’t smell gas, go to the next step.

3. AUTOMATIC IGNITION: MAN-knob (2) in ON position. Ensure Flame Adjustment knob (3) is set to lowest setting (☉) (Fig. 1). Locate the pilot (Fig. 3.) inside of firebox.
   • On the handset, press the Power button (◯); a short acoustic signal confirms the start has begun.
   • Further short acoustic signals indicate the ignition process is in progress.
   • When the pilot is lit, the Flame Adjustment knob (3) will automatically rotate to the highest setting.
   • Press the Down button (▼) on the handset to reduce the flame height.

4. MANUAL IGNITION: MAN-knob (2) in MAN position (Fig. 2). With the front and side windows and front sill off, locate the pilot (Fig. 3) inside of firebox at the front.
   • Set Flame Adjustment knob (3) to the lowest setting (☉).
   • Push down the metallic core (4) with a pen or similar instrument; this will establish the pilot gas flow.
   • Light gas at the pilot (5) with a match.
   • Continue holding down metal core (4) for about 10 seconds; after release, pilot should remain lit.
     • If the pilot will not stay lit after several tries, turn the gas control knob (3) to OFF (☉) and call your local service technician or gas supplier.
     • Reinstall the window and set the MAN-knob (2) to ON; turn Flame Adjustment knob (3) up (☉) or down (☉) manually or use the Up/Down buttons (▲▼) buttons on the handset to adjust the flame height.

TO TURN OFF GAS TO APPLIANCE

AUTOMATIC SHUT-OFF (using the handset):
• Press and hold the Down button (▼) on the handset to shut-off the main burner gas flow.
• Press Power button on handset to shut-off the appliance, including pilot flame.
Appendix B—Remote Control Operation

Initial Pairing
Before the remote control can be used with the fireplace, it must be paired. See page 49.

Remote Control Operation

NOTE: Before using the remote control system for the first time, the receiver and the handset must be paired. See the section Remote Control Initial Pairing on the first page of this manual.

Main Display

To Turn On Fire

💡 NOTE: When pilot ignition is confirmed, motor automatically turns to maximum flame height.

One-Button lighting (default): 
Two-Button lighting: 
simultaneously

Press and hold for 4 seconds, until 8 short beeps and a blinking series of lines confirms the start sequence has begun. Release button.

Main gas flows once pilot ignition is confirmed.

Handset automatically goes into manual mode after main burner ignition.

Standby Mode (Pilot Flame)
Press and hold \( \downarrow \) to set appliance to pilot flame.

⚠️ CAUTION: If the pilot does not stay lit after several tries call your local service technician or gas supplier.

To Turn Off Fire

Press \( \circ \) to turn OFF.

Note: There is a 2 minute delay after switching off before the next ignition is possible.

⚠️ CAUTION: Always check the fire and pilot visually to ensure they are off.

Flame Height Adjustment
To increase flame height, press and hold \( \uparrow \). 
To decrease flame height, press and hold \( \downarrow \). You may hold the button down until the fire is set to pilot flame only.
Appendix B—Remote Control Operation

Designated Low Fire and High Fire
To go to low fire, double-click \( \text{LO} \). “LO” is displayed.

**Note:** Flame goes to high fire first before going to low fire.

To go to high fire, double-click \( \text{HI} \). “HI” is displayed.

Choosing 1-Button or 2-Button Ignition
On the remote control handset, you can choose a 1-button or 2-button ignition. You can also choose to activate or deactivate some of the functions. By default, the handset is set to a 1-button ignition.

To change from 1-button to 2-button ignition, remove the batteries, wait 10 seconds, reinsert batteries, and immediately when the display flashes, press and hold the \( \text{ON} \) button for 10 seconds. \( \text{ON} \) is displayed and 1 is flashing. When change is complete, 1 changes to 2.

To change from 2-button to 1-button ignition, proceed the same as above. \( \text{ON} \) is displayed and 2 is flashing. When change is complete, 2 changes to 1.

Deactivating or Activating Functions
These functions are active by default, but can be deactivated at any time:

- Child Proof
- Program Mode
- Thermostatic Mode
- Eco Mode
- Circulating Fan Operation
- Countdown Timer

To deactivate functions:
1. Install batteries. All icons are displayed and flashing.
2. While the icons are flashing, press the relevant function button and hold for 10 seconds.
3. The function icon will flash until deactivation is complete. Deactivation is complete when the function icon and two horizontal bars (\( \rightarrow \rightarrow \)) are displayed.

**Note:** If a deactivated button is pressed, there is no function, and the two horizontal bars are displayed.

To activate functions:
1. Install batteries. All icons are displayed and flashing.
2. While the icons are flashing, press the relevant function button and hold for 10 seconds.
3. The function icon will continue to flash until activation is complete, and then turn solid. Activation is complete when the function icon is displayed.

Setting Celsius or Fahrenheit
To change between °C and °F, press and hold \( + \) simultaneously.

**Note:** °C = 24-hour clock  
°F = 12-hour clock

Setting the Time
1. Press \( + \) simultaneously. Day flashes.
2. Press \( + \) to select a number to correspond with the day of the week.
   - 1 = Monday
   - 2 = Tuesday
   - 3 = Wednesday
   - 4 = Thursday
   - 5 = Friday
   - 6 = Saturday
   - 7 = Sunday
3. Press \( + \) simultaneously. Hour flashes.
4. To select hour press \( \downarrow \) or \( \uparrow \).
5. Press \( + \) simultaneously. Minutes flash.
6. To select minutes press \( \downarrow \) or \( \uparrow \).
7. To confirm, press \( + \) simultaneously or wait.
Appendix B—Remote Control Operation

Child Proof
Your handset can be set to lock out all commands to the fireplace, except OFF.

To turn Child Proof ON:
1. Press and hold \(\text{ } + \text{ }\) simultaneously.
2. \(\text{ }\) is displayed. Child Proof is now active.

To turn Child Proof OFF:
1. Press and hold \(\text{ } + \text{ }\) simultaneously.
2. \(\text{ }\) disappears. Child Proof is now inactive, and the handset has full function.

Countdown Timer
You can set your fireplace to automatically turn off at the end of a timer.

To set a Countdown Timer:
1. Press and hold \(\) until \(\) is displayed. \(\text{Hour}\) flashes.
2. Press \(\text{A}\) or \(\text{V}\) to select Hour.
3. To confirm, press \(\). \(\text{Minutes}\) flash.
4. Press \(\text{A}\) or \(\text{V}\) to select Minutes.
5. To confirm, press \(\) or wait.

To turn off a Countdown Timer:
1. Press \(\), and the \(\) countdown disappears.

Note: The Countdown Timer only works in Manual, Thermostatic, and Eco modes. Maximum countdown time is 9 hours and 50 minutes.

Light/Dimmer Operation (not available)

Circulating Fan Operation (if installed)
Setting:
1. Press and hold \(\) until \(\) flashes.
2. Press \(\text{A}\) to increase or \(\text{V}\) to decrease fan speed.
3. To confirm setting, either press \(\) or wait. \(\) is displayed.

Off:
Press \(\text{V}\) until all 4 speed level bars disappear.

Note: When setting, if the fan was not switched off after last use, it starts automatically 4 minutes after ignition at maximum speed, and goes to the last set level after 10 seconds. The fan stops 10 minutes after the gas is OFF or at pilot.
Appendix B—Remote Control Operation

Modes of Operation

Thermostatic Mode
The room temperature is measured and compared to the set temperature. The flame height is automatically adjusted to achieve the set temperature.

Program Mode
The temperature is controlled by Programs 1 and 2, each of which can be set to go on and off at specific times, at a set temperature.

Eco Mode
Flame height modulates between high and low. If the room temperature is lower than the set temperature, the flame height stays on high for a longer period of time. If the room temperature is higher than the set temperature, the flame height stays on low for a longer period of time. One cycle lasts approximately 20 minutes.

Manual Mode
The on/off status of the fireplace, as well as flame height, are manually controlled by the user.

Thermostatic Mode
On:
Press \(\text{I}\) \(\text{I}\) is displayed. Preset temperature displays briefly, followed by the room temperature.

Setting Desired Temperature:
1. Press and hold \(\text{I}\) until \(\text{I}\) is displayed and set temperature flashes.
2. To adjust set temperature, press \(\text{A}\) or \(\text{V}\).
3. To confirm, press \(\text{I}\) or wait.

Off:
1. Press \(\text{I}\).
2. Press \(\text{A}\) or \(\text{V}\) to go to Manual Mode.
3. Press \(\text{A}\) to go to Program Mode.
4. Press \(\text{A}\) to go to Eco Mode.

Program Mode
On:
Press \(\text{A}\), \(\text{A}\), \(\text{ON}\) or \(\text{OFF}\) are displayed.

Off:
1. Press \(\text{A}\), \(\text{A}\), \(\text{A}\) or \(\text{A}\) to go to Manual Mode.
2. Press \(\text{I}\) to go to Thermostatic Mode.
3. Press \(\text{A}\) to go to Eco Mode.

Note: The set temperature for Thermostatic Mode is the temperature for the ON time in Program Mode. Changing the Thermostatic Mode set temperature also changes the ON time temperature in Program Mode.

Default Settings:
- ON TIME (Thermostatic) TEMPERATURE: 70°F / 21°C
- OFF TIME TEMPERATURE: “ifice” (pilot flame only)
Appendix B—Remote Control Operation

Temperature Setting:
1. Press and hold until flashes. ON and set temperature (set in Thermostatic Mode) is displayed.
2. To continue, press or wait. OFF displayed, temperature flashes.
3. Select off temperature by pressing or .
4. To confirm, press .

Note: The on (Thermostatic) and off set temperatures are the same for each day.

Day Setting:
1. ALL flashes. Press or to choose between:
   • ALL = same settings ON-OFF every day
   • SA:SU = same settings ON-OFF Saturday and Sunday
   • 1, 2, 3, 4, 5, 6, 7 = daily timer—unique ON-OFF settings for a single day of the week, for multiple days of the week or for every day of the week.
2. To confirm, press .

ALL Selected

On Time Setting (PROGRAM 1)
1. , 1, ON are displayed. ALL is displayed briefly. Hour flashes.
2. To select hour, press or .
3. To confirm, press ., 1, ON are displayed. ALL displayed briefly. Minutes flash.
4. To select minutes, press or .
5. To confirm, press .

Off Time Setting (PROGRAM 1)
1. , 1, OFF are displayed. ALL is displayed briefly. Hour flashes.
2. To select hour, press or .
3. To confirm, press ., 1, OFF are displayed. ALL displayed briefly. Minutes flash.
4. To select minutes, press or .
5. To confirm, press .

Note: Either continue to PROGRAM 2 and set ON and OFF times or stop programming at this point, and PROGRAM 2 remains deactivated.

Note: PROGRAM 1 and 2 use the same ON (Thermostatic) and OFF temperatures. Once a new ON (Thermostatic) and/or OFF temperature has been set, that temperature becomes the new default setting.

Note: ON and OFF times programmed for PROGRAM 1 and PROGRAM 2 become the new default times.
The batteries must be removed to clear the PROGRAM 1 and PROGRAM 2 ON and OFF times and temperatures.

SA:SU or Daily Timer (1-7) Selected
• Set on time and off time using the same procedure as “ALL Selected” above.
• Waiting to finish setting.

Eco Mode
On:
Press button to enter Eco Mode. is displayed.
Flame height modulates between high and low every 20 minutes.

Off:
Press button to exit Eco Mode. disappears.
Appendix B—Remote Control Operation

Low Battery Indication

⚠️ CAUTION: Do not use a screwdriver or other metallic object to remove the batteries from the battery holder or the handset. This could cause a short circuit.

**Handset**
The battery icon ![battery icon] will show when the battery needs to be replaced. Replace with two 1.5 V AAA alkaline batteries.

**Receiver**
Frequent beeps for 3 seconds when the motor turns indicate the batteries in the battery holder need to be replaced. Replace with four 1.5 V AA alkaline batteries.

Automatic Shut Off

**Countdown Timer**
At the end of countdown time period, the fire turns off. The Countdown Timer only works in Manual, Thermostatic, and Eco Modes. Maximum countdown time is 9 hours and 50 minutes.

**Low Battery Receiver**
With low battery power in the battery holder, the system shuts off the fire completely. (This will not happen if the power is completely interrupted.)

**Seven Day Shut Off**
The system shuts off the fire completely if there is no change in flame height for 7 days.

**Automatic Turn Down**

**3 Hour No Communication Function**
The valve will turn to pilot flame if there is no communication between the handset and receiver for a 3-hour period. The fire will continue to function normally when communication is restored.
# Appendix B—Remote Control Operation

## Error Codes

In the event of an error condition with the handset or fireplace, the handset will display an error code.

<table>
<thead>
<tr>
<th>Failure Code</th>
<th>Message on Handset</th>
<th>Duration of Display</th>
<th>Symptom</th>
<th>Possible Cause</th>
</tr>
</thead>
</table>
| F04          | F04                | 4 sec               | • No pilot flame within 30 sec  
• **Note:** after 3 failed ignition sequences, F06 shown | • No gas supply  
• Air in pilot supply line  
• No spark  
• Reversed polarity in thermocouple wiring |
| F06          | F06                | 4 sec               | • 3 failed ignition sequences in 5 minutes  
• Fire is not responding, no pilot flame | • No gas supply  
• Air in pilot supply line  
• No spark  
• Reversed polarity in thermocouple wiring  
• Incorrect pilot orifice if valve has been converted from LPG to NG or vice versa |
| F07          | Low battery symbol | Permanent           | • Battery icon flashes on handset display | • Low battery in handset |
| F09          | F09                | 4 sec               | • Fire is not responding  
• No electronic control of fire | • Down arrow button (▼) was not pressed during pairing  
• Receiver and handset are not synced |
| F46          | F46                | 4 sec               | • Fire is not responding  
• Intermittent response  
• No electronic control of fire | • No or bad connection between receiver and handset  
• No power at receiver (batteries low)  
• Low communication range (mains adapter faulty, handset not communicating with receiver) |
Appendix C—Wall Switch Operation

The Wall Switch can be used to control your fireplace. You can turn the pilot on or off and you can increase or decrease the flame height. Note that the thermostat and programming functions are not available with the wall switch.

Turning Appliance ON and OFF
Press ON-OFF button once to light pilot. Press again to shut off pilot.

Adjusting Flame Height
Press and hold large flame button to gradually increase flame height.

Press and hold small flame button to gradually decrease flame height.
Appendix D—HeatShift System

HeatShift™ System

Planning Installation: Linear with HeatShift™

Instructions for use with the following Valor Heater Models: 1500, 1600, 1700 and 1800 J or K
Incompatible with earlier models: 1500I, 1600I, and 1700I

Application
The HeatShift™ system redistributes the warm air flow away from the fireplace opening to a more desirable location using natural convection without use of a fan.

Plenums LKD1, LDK3 or LDK4: the warm air flow is relocated to a position higher up the wall, out the sidewalls, or even to an adjacent room.

Termination Plates LDK7: the warm air flow is discharged through a gap (min. 2-1/2”) between the wall above the fireplace and the ceiling. LDK7’s discharge opening must be located in the same room as the fireplace.

The result is much cooler wall temperatures above the fireplace opening for locating televisions, artwork, etc.

The 1595CFK or 1595CFKV2 Circulating Fan Kit are not recommended when installing the HeatShift system.

Any kit, LDK1, LDK3, LDK4 or LDK7 may be used with compatible model fireplaces L1, L2 or L3 listed above.

As a further option, the warm airflow may be extracted away from the duct kit plenum (LDK1 and LDK4 ONLY) by connecting a 1270RBK Remote Blower Kit to the duct kit plenum.

This kit is compatible with the listed fireplaces only. Earlier version fireplaces will not accept the addition of this kit.

Note: These instructions are to be used in conjunction with instructions regarding fireplace installation in this manual.

The use of this kit will permit lower mantel clearances to be used—see Combustible Mantel Clearances in this Appendix. These lower mantel clearances must ONLY be used when the HeatShift system is installed and the internal convection baffle has been removed.

Approvals
The LDK1, LDK3, LDK4 and LDK7 duct kits are CSA approved for use only with Valor Series fireplaces listed above—DO NOT use with any other models.

This HeatShift system may also be used to reduce wall surface temperatures on approved outdoor installations.

5-inch diameter duct used with this kit must be metal and meet requirements of UL-181 Class 1 Air Duct. Flexible aluminum duct is acceptable provided it meets the UL-181 Class 1 requirements.

⚠️ WARNING
DO NOT cover or place objects in front of or on top of air outlet(s). AVOID locating outlet within 7 feet above floor level as discharge temperatures are hot!

⚠️ WARNING
When placing discharge close to ceilings, staining or streaking may occur on light colored ceilings due to any dust, etc. in air flow; placing plenum(s) lower on the wall will help reduce the possibility of staining or streaking.

⚠️ WARNING
All fireplaces listed above require the removal of the internal convection baffle for this system to function properly—read instructions carefully!
Appendix D—HeatShift System

Kits
There are 4 kits to choose from:
- LDK1—48” Plenum
- LDK3—14” Plenums (2), includes grilles
- LDK4—38” Plenum
- LDK7—Duct Termination Plates (2)—for wall valance discharge ONLY

Kits Contents

LDK1
48” x 2”

LDK3
2 - 14” x 6”

LDK4
38” x 2”

LDK7
2 Duct termination plates
Appendix D—HeatShift System

Optional accessories
- LDK2—48” Finishing Frame, to use with LDK1
- LDK5—38” Finishing Frame, to use with LDK4
- LDK6—5” dia Aluminum 2-ply Flex Kit—
  2 x 10’-0” lengths, may be cut to required length

Kits Contents

LDK2 (supplied separately)
48” frame, white

LDK5 (supplied separately)
38” frame, white

LDK6
2 - 10’ x 5” (aluminum flex)
Appendix D—HeatShift System

**Suggested Configurations**

- **Front wall outlet using LDK1 or LDK4**
- **Rear wall outlet using LDK1 or LDK4**
  - Note: Fireplace vent may conflict with plenum. Offset vent around plenum.
- **Side wall outlets using LDK3**
- **Rear wall outlets using LDK3**
  - Note: Vertical venting straight off 1600K heater will NOT clear 38” (LDK4) or 48” (LDK1) plenums without offsetting vent around plenum.
  - Note: Take-off collars staggered, 2 per side

**WARNING**

The plenum duct kits are approved for horizontal discharge ONLY. The termination duct plates are approved for vertical upward discharge ONLY. DO NOT install plenum or termination plates in floor or ceiling. DO NOT COVER OR PLACE objects in front of or on top of air outlet(s). AVOID locating outlet within 7 feet of the floor level as discharge air temperatures are hot!

**DO NOT DISCHARGE THROUGH EXTERIOR WALLS!**

**NOTE** This duct kit may also be used for outdoor installations where reduced wall surface temperatures above the unit are desired. The discharge grilles must be located under the weatherproof enclosure described in the GV60CKO Outdoor Fireplace Conversion Kit instructions.
Overview (applies to LKD1, LDK3 and LDK4 kits)

Flexible or rigid, 5" diameter UL-181, Class 1 Air Duct (4) (use LDK6 kit or equivalent)

Appendix D—HeatShift System

LDK Duct Kit LDK 1, LDK 4 with optional 1270RBK Remote Blower Kit
(not approved with outdoor installations)

Universal take-off supplied with 1270RBK kit. Can mount to either end of plenum. Maximum 1 x 1270RBK kit per plenum. Note: DO NOT CONNECT 1270RBK directly to fireplace when using LDK Duct Kit; connect to LDK plenum ONLY as this will ensure cooler wall temperature whether or not the 1270 fan is running.
Appendix D—HeatShift System

COMBUSTIBLE Mantel Clearances Linear appliances (when using HeatShift System ONLY)

Sidewall clearances remain as stated in this installation manual.

**WARNING**

RISK OF OVERHEATING AND FIRE! Ensure HeatShift installation is complete AND internal convection baffle is removed (see HeatShift installation) when using these combustible mantel clearances.

Combustible materials must be kept behind this line

Mantel Height (from Bottom of Unit)

- 33-3/4" Mantel Height
- 29-3/4"
- 23-3/4"
- 10"
- 6"
- 1 1/4"

Note: These Mantel Clearances apply ONLY when LDK Duct system is installed

Cement board as specified in installation manual packed with appliance

DO NOT COVER THE TRIM

Combustible materials must be kept behind this line

Note: Combustible wall finish up to 1" thick may be installed over cement board and butt up to the 1" trim all around the opening. DO NOT COVER THE TRIM

Opening in Trim

- 14 1/4" Opening in Trim
- 9 1/2"
- 4" minimum to combustible hearth
- 1/4" minimum to combustible hearth
- Bottom of Unit

Cement board as specified in installation manual packed with appliance

NON-COMBUSTIBLE Flush Hearth/Mantel Projections (when using HeatShift System ONLY)

Max. 6" non-combustible projection allowed top and bottom, at edge of 1" trim. Only allowed when using LDK Duct kit.
Appendix D—HeatShift System

Remove Convection Baffle

To be effective the LDK Duct Kit requires that a convection baffle located above the firebox inside the appliance case be removed to allow the hot airflow to convect upwards into ducts installed on the fireplace.

Remove the convection baffle from the appliance. It is held in place by screws located right behind the upper edge of the fireplace opening (3 screws/baffle). Recycle this panel as it is no longer needed.
Appendix D—HeatShift System

Install HeatShift collars
1. Remove the four cover plates on top of the appliance case (6 screws each).

2. Install the collars on the holes on top of the appliance's case (6 screws each).

⚠️ WARNING
All FOUR (4) takeoffs MUST BE CONNECTED TO PLENUM(S).

⚠️ WARNING
DO NOT INSTALL 1270RBK Remote Blower Kit to any of these 4 takeoffs.
Appendix D—HeatShift System

Install Plenum Kits (LDK1, LDK3 & LDK4) — see next page for LDK7 Duct Termination Plates

1. Frame a rough opening at the desired location—see earlier sections of this manual for allowable plenum positions and rough frame opening sizes.

2. Install top mounting bracket(s) to the plenum using screws provided (use the short sheet metal screws provided otherwise the screw tails (ends) will interfere with the finishing frame when installed).

3. Install the plenum(s) into the rough frame opening maintaining minimum clearances to combustibles as listed—see page 10. Fix the plenum to the framing using nails or screws through the top mounting bracket. Note that the mounting brackets are not intended to carry the weight of the plenum and pipes. Provide support to the underside of the plenum and ensure the plenum is level and its outlet is not distorted (see detail on page 11). Use metal strapping (all-round, not supplied) as required to further secure the plenum to framing.

4. Attach one section of UL-181, Class 1 approved air duct to each of the collars and secure it with gear clamps provided. DO NOT SPLICE DUCTS!

5. Attach the top of the pipe sections to the plenum securing them with the gear clamps provided. An upward slope must be maintained in horizontal sections of pipes for proper convection. Use straps as necessary to maintain the pipes positions. Support horizontal sections every 24 inches.

6. Paint the inside surfaces of the plenum using high-temperature flat black spray paint for installations where the inside of the plenums may be visible.

Note: The flanges of the white finishing frame (when used) will insert approximately 1-1/4” into the plenum covering the shiny sheet metal.

7. Install the finishing frame or louver to the plenum after the wall finish is completed:
   LDK1, LDK4: Use the LDK2 or LDK5 depending on the length of the plenum.
   LDK3: Use the grilles provided with the kit.

Note: The frame/louver are finished white but may be painted another color if desired; use high-temperature paint (250ºF). You may also finish up to the perimeter of the plenum opening with your material of choice and not use the frame or louver. Do not finish over any of the opening in the plenum outlet.

8. Continue with the fireplace installation.
Appendix D—HeatShift System

Install Duct Termination Plates (LKD7) —see previous page for LDK1, LDK3 & LDK4 Plenum kits

1. Frame a rough opening and platform at the desired location—see earlier sections of this manual for allowable duct termination plates positions and rough frame opening sizes.

2. On each duct termination plate, rotate both stand-offs to the vertical position and secure in place using screws provided.

3. Install the termination plates into the framing ensuring collars/pipes on underside of plates maintain 1 inch clearance to combustibles and clearance to combustible above the plates are maintained as listed on page 13. The termination plates perimeter may be trimmed as necessary to accommodate framing. Secure the termination plate to framing using screws or nails to avoid movement.

4. Attach one section of UL-181, Class 1 approved air duct to each of the collars and secure it with gear clamps provided. DO NOT SPLICE DUCTS!

5. Attach the top of the pipe sections to the duct termination plates securing them with the gear clamps provided. An upward slope must be maintained in horizontal sections of pipes for proper convection. Use straps as necessary to maintain the pipes positions. Support horizontal sections every 24 inches.

6. Continue with the fireplace installation.
