Gravity Vent Gas Insert Fireplace
738JN (natural gas) & 738JP (propane gas)

**DANGER**

HOT GLASS WILL CAUSE BURNS.
DO NOT TOUCH GLASS UNTIL COOLED.
NEVER ALLOW CHILDREN TO TOUCH GLASS.

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.

**WARNING**

FIRE OR EXPLOSION HAZARD
Failure to follow safety warnings exactly could result in serious injury, death, or property damage.

— Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
— WHAT TO DO IF YOU SMELL GAS
  ▪ Do not try to light any appliance.
  ▪ Do not touch any electrical switch; do not use any phone in your building.
  ▪ Leave the building immediately.
  ▪ Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
  ▪ If you cannot reach your gas supplier, call the fire department.
— Installation and service must be performed by a qualified installer, service agency or the gas supplier.

This appliance may be installed in an aftermarket permanently located, manufactured (mobile) home where not prohibited by local codes.
This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.
This appliance is a domestic room-heating appliance. It must not be used for any other purposes such as drying clothes, etc.

This appliance is suitable for installation in a bedroom or bed sitting room.

Ce guide est disponible en français sur demande.
The information contained in this installation manual is believed to be correct at the time of printing. Miles Industries Ltd. reserves the right to change or modify any information or specifications without notice. Miles Industries Ltd. grants no warranty, implied or stated, for the installation or maintenance of your heater, and assumes no responsibility for any consequential damage(s).
SAFETY AND YOUR FIREPLACE

Read and understand all instructions carefully before starting the installation. Failure to follow these installation instructions may result in possible fire hazard and will void the warranty.

Prior to the first firing of the fireplace, read the Owner’s information section of this manual.

Do not use this appliance if any part has been under water. Immediately, call a qualified service technician to inspect the unit and to replace any part of the control system and any gas control that has been under water.

This unit is not for use with solid fuel.

Installation and repair should be performed by a qualified service person. The appliance and venting system should be inspected before initial use and at least annually by a professional service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding, etc. It is imperative that the unit’s control compartment, burner, and circulating air passageways be kept clean to provide for adequate combustion and ventilation air.

Always keep the appliance clear and free from combustible materials, gasoline, and other flammable vapors and liquids.

Never obstruct the flow of combustion and ventilation air. Keep the front of the appliance clear of all obstacles and materials for servicing and proper operation.

This unit must be used with a vent system as described in this installation manual. No other vent system or components may be used.

This gas fireplace and vent assembly must be vented directly to the outside and must never be attached to a chimney serving a separate solid fuel burning appliance. Each gas appliance must use a separate vent system. Common vent systems are prohibited.

Inspect the external vent cap on a regular basis to make sure that no debris, plants, trees, shrubs are interfering with the air flow.

Turn off the gas before servicing this appliance. It is recommended that a qualified service technician perform an appliance check-up at the beginning of each heating season.

WARNING:
This product can potentially expose you to chemicals including Benzene which are known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov

Do not use this heater as a temporary source of heat during construction.

Due to the high temperature, the appliance should be located out of traffic areas and away from furniture and draperies.

Clothing or flammable material should not be placed on or near the appliance.

This appliance is a domestic room-heating appliance. It must not be used for any other purposes such as drying clothes, etc.

Do not place furniture or any other combustible household objects within 36” of the fireplace front.

Be careful not to put any decorating objects sensitive to heat to close above or around the fireplace as it gets very hot when operating.

The glass door assembly must be in place and sealed before the unit can be placed into safe operation.

Do not operate this appliance with the glass door removed, cracked, or broken. Replacement of the glass door should be performed by a licensed or qualified service person. Do not strike or slam the glass door.

The glass door assembly shall only be replaced as a complete unit, as supplied by the fireplace manufacturer. No substitute material may be used.

Do not use abrasive cleaners on the glass door assembly. Do not attempt to clean the glass door when it is hot.

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.

If the barrier becomes damaged, the barrier shall be replaced with the manufacturer’s barrier for this appliance.

Any safety screen, guard or barrier removed for servicing the appliance, must be replaced prior to operating the appliance.

Children and adults should be alerted to the hazards of high surface temperature and should stay away to avoid burns or clothing ignition.

Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at-risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children and other at-risk individuals out of the room and away from hot surfaces.
Parts of your Valor Fireplace become extremely hot while in operation.

The glass viewing window temperature can exceed 500°F at full capacity.

Momentary contact with a hot glass surface can cause a severe burn, even if the fireplace is operating at reduced heating capacity.

The glass window will remain hot for an extended period of time after the fireplace has been turned off. Ensure that children are prevented from touching the fireplace during the cool down period.

Toddlers and Young Children must be closely supervised at all times when they are in the same room as the operating fireplace. They lack full awareness of danger and rely on your protection. Toddlers, in particular, do not have the motor skills and response reflexes to withdraw in the event of accidental contact with a hot surface.

A physical barrier is strongly recommended if there are young children, or at-risk individuals in the house. Install an approved after-market safety gate to keep toddlers, young children and other at-risk individuals a safe distance from the fireplace.

Keep the remote control handset out of reach of children at all times. A wall mount storage holster is provided with your remote control handset.

Ensure that the fireplace, including the pilot light, is completely turned off when children are present and close supervision and safety barriers are not available—see page 7 of this manual.

If the fireplace is not going to be used for the summer or any extended period of time, remove the batteries from the remote control handset and remote battery box. It is recommended that batteries are replaced annually in any event—see page 11.
SAFETY AND YOUR FIREPLACE

This manual and particularly the preceding and following pages contain very important information regarding the safe operation of your fireplace as well as maintenance instructions. Read carefully before operating your fireplace and pay special attention to the safety warnings.

A heating gas appliance does require safe handling. For this reason, we very strongly recommend children are not allowed to touch the fireplace or controls. **Install a screen or barrier in front of the fireplace to protect your children against severe burns.**

This appliance is designed and approved as a supplemental heater and provides the potential for most energy conservation when used while attended. The use of an alternate primary heat source is advisable.

WARNING

**Extremely Hot!!!**

- **Read the safety information on pages 3 and 4 of this manual before operating your gas heater.**
- Some parts of your fireplace are **extremely hot**, particularly the glass window.
- **Do not let children touch the glass** or any parts of your fireplace **even after it is turned off** as it is still hot.
- **Use the barrier screen** provided with the trim or a gate to reduce the risk of severe burns.
- Keep the remote control handset **out of reach of children**.
- **Hot hearth/floor surface!** The hearth or floor directly in front of the fireplace is very hot when the fireplace heats. Even if constructed of non-combustible materials, and although safe, it may reach temperatures in excess of 200º F depending on choice of materials. **Do not step on it!**
- Some materials or items, although safe, may discolor, shrink, warp, crack, peel, and so on because of the heat produced by the fireplace. **Avoid placing** candles, paintings, photos, and other items **sensitive to heat** within 36 inches (0.9 m) around the fireplace.
- Solid wood flooring in front of the fireplace (if allowed) may shrink during the heating season due to heat.
Thank You ...

For purchasing a Valor by Miles Industries. Your new radiant gas heater is a technical appliance that must be installed by a qualified dealer. Each Valor fireplace is fully tested during the production process for your safety and comfort. Your unit has been professionally installed by:

Dealer Name: ________________________________
Phone Number :_______________________________

Should you encounter an operational problem, call your dealer immediately.

Do not try to repair the unit as you may cause an injury or damage the fireplace.

Locating Fireplace & Lighting Information Card

The Fireplace and Lighting Information card is located under the firebox.

To access the plate, remove the access panel, grab the card and slide it out to read it. There is important information on both sides of the card.

Operating Your Fireplace for the First Time

When operating your new fireplace for the first time, some vapors may be released due to the burning of curing compounds used in the manufacture of the appliance. They may cause a slight odor and could cause the flames to be the full height of the firebox, or even slightly higher, for the first few hours of operation. It is also possible that these vapors could set off any smoke detection alarms in the immediate vicinity. These vapors are quite normal on new appliances. We recommend opening a window to vent the room. After a few hours use, the vapors will have disappeared and the flames will be at their normal height.

Flame Supervision Device

For your safety, this appliance is fitted with a flame supervision device which will shut-off the gas supply if, for any reason, the pilot flame goes out. This device incorporates a fixed probe, which senses the heat from the pilot flame. If the probe is cool, the device will prevent any gas flow unless manually lighting the pilot. See full lighting instructions on page 11 of this manual.

Performance of propane gas appliances may be affected by the quality of commercial gas supplied in your area.
Operating Your Fireplace

Fireplace Control Devices
Your fireplace is operated by a remote control handset which can be programmed to function automatically—see pages 8–9.

How to Turn Your Fireplace OFF (including pilot)

WARNING
RISKS OF SEVERE BURNS! SURFACES OF THE FIREPLACE ARE VERY HOT DURING OPERATION! Be very careful and wear gloves to access controls.

Locate the gas valve under the firebox.

1. Set the Flame Adjustment Knob clockwise \( \bigcirc \) as far as possible.
2. Push in the Gas Control Knob slightly and turn it clockwise \( \bigcirc \) to OFF. Do not force.

In the unlikely event that you cannot turn off your fireplace with the remote control handset, turn off gas supply and call your dealer for service assistance.

How to Ensure Your Fireplace Cannot Be Turned ON Inadvertently
The best way to ensure your fireplace will not turn on is to turn it off, including pilot—see above.
If you wish to maintain the pilot only without the main burner coming on, turn the Gas Control Knob to Pilot position.

Your Fireplace’s Vent Safety Switch
This appliance is equipped with a vent safety switch which, when activated, will turn off the burner and pilot if the vent is blocked, disconnected, or if there is excessive down draught.

If the safety switch is activated, wait for it to cool off before trying to light the appliance again. The safety switch will cool off and reset itself automatically after 25 to 30 minutes.

In the event that the safety switch is activated again, contact a qualified service technician for inspection.

Should the safety switch require replacement, only use parts supplied by Miles Industries.

Turn gas valve buttons clockwise to turn fireplace OFF.
Using the Remote Control

Your fireplace remote control helps you get the comfort, convenience and aesthetics you want from your gas fireplace. The remote controls your fireplace in different ways.

IMPORTANT: BEFORE YOU BEGIN, please note that on this system, the settings of time, temperature and automatic ON/OFF can only be programmed when the function display is flashing. Be patient when programming as it can take a few seconds to set.

Setting the time

The first thing to do is to set the time.

1. With your thumb, hold down both the AUTO and TIMER buttons until F flashes. Let go.
2. Note the digital clock on the bottom right hand corner. The ▲ button sets the hour; the ▼ button sets the minutes. Set the time.
   Note: You must start setting the time while the F is flashing. If it stops flashing, go back to 1.
3. The display shows °C/24-hour or °F/12-hour. To change the temperature/hour display, press on the AUTO button while the display flashes.
4. Let go and wait until the flashing stops. The remote shows the time you set. It also shows the current temperature.

Setting the temperature

Use this setting when you come in and want to enjoy a specific temperature.

1. Push the AUTO button until a number and F flash. Let go.
2. While it is still flashing, push the ▲ and ▼ buttons to the temperature you want. Let go.

Your fireplace will reach that temperature and the remote will check the temperature every five minutes, adjusting the amount of fuel needed to give you a steady, even heat.

Setting the flame

Use this setting when you want a particular flame level. For instance, you want to watch flames burn at their highest level and you don’t mind if the room is too hot.

1. To raise the flame, press and hold the ▲ button until the flame gets to the desired level. Let go.
2. To lower the flame, press and hold the ▼ button until the flame gets to the desired level. Let go.

The flame level will remain just as you set it.
Using the Remote Control

Programming time and temperature
You can set your fireplace to come on before you wake up and turn off after you leave and then, turn on again just before you come home and turn off after going to bed. You can leave it like this for the heating season.

1. Decide what temperature you want your fireplace to be at. Also, decide what time you want your fireplace to turn on and off. Finally, decide what time you want it to come back on and off in the afternoon or evening. For the first few times you set the timer, it’s handy to write these times down.

2. Set the temperature (just as you did in the section Setting the temperature.)

3. Press the TIMER button and hold it until P1 ☀ appears and flashes. Let go. While flashing, push the buttons ▲ (hour) and ▼ (minutes) to set the time at which you want your fireplace to turn on in the morning.

4. Press the TIMER button and hold it until P2 ☀ appears and flashes. Let go. While flashing, push the buttons ▲ (hour) and ▼ (minutes) to set the time at which you want your fireplace to turn off when you leave.

5. Press the TIMER button and hold it until P2 ☀ appears and flashes. Let go. While flashing, push the buttons ▲ (hour) and ▼ (minutes) to set the time at which you want your fireplace to turn back on in the afternoon.

6. Press the TIMER button and hold it until P2 ☀ appears and flashes. Let go. While flashing, push the buttons ▲ (hour) and ▼ (minutes) to set the time at which you want your fireplace to turn off in the evening.

7. That is all you have to do. Your fireplace will give you steady, even heat at the temperatures and times you set.

Note: If you want to set your fireplace for only one time on and off, set P2 ☀ and P2 ☀ for the same times as P1 ☀. The remote will record the P1 ☀ off time for both P2 times.

To temporarily override the timer setting, just press AUTO or ▲ and ▼ to go back to manual settings. Press TIMER to go back to your settings.

Battery Replacement
When your remote control displays BATT, you need to replace the batteries.
Handset: one 9 volt alkaline battery.
Receiver: four AA 1.5 volt alkaline batteries.

---

CAUTION

DO NOT USE a screwdriver or other metallic object to remove the batteries from the receiver or the handset! This could cause a short circuit to the receiver.

FOR YOUR SAFETY READ BEFORE LIGHTING

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This appliance has a pilot, which must be lighted by hand. When lighting the pilot, follow these instructions exactly. To save energy, turn the pilot off when not using the appliance.

B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS
- Do not try to light any appliance.
- Do not touch any electric switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to push in or turn the control knobs. Never use tools. If the controls will not push in or turn by hand, don’t try to repair them, call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control, which has been under water.

LIGHTING INSTRUCTIONS

1. STOP! Read the safety information above.
2. Set the flame adjustment knob as far clockwise as possible*.
3. Turn the gas control knob clockwise to OFF.
   NOTE: The knob cannot be turned from PILOT to OFF unless it is pushed in partially. Do not force.
4. Wait five (5) minutes to clear out any gas, then smell for gas, including near the floor. If you smell gas, STOP! Follow “B” in the safety information above. If you don’t smell gas, go to the next step.
5. Find the pilot. It is at the left side of the firebox viewed through slotted hole in front log.
6. Push in and turn the gas control knob counterclockwise until resistance is felt just before the “IGN” position.
7. Keep pushed in for a few seconds to allow gas to flow then, keeping knob depressed, turn to “PILOT” to light pilot. Hold knob in for a further 5 seconds then release. The knob should pop back out. Pilot should remain lit. If pilot goes out repeat steps 3 through 7.
   - If knob does not pop out when released, stop and immediately call your service technician or gas supplier.
   - If pilot lights but will not stay lit after several tries, turn the gas control knob to “OFF” and call your service technician or gas supplier.
8. When pilot is lit, partially depress the knob and turn to “ON” position (Burner alight).
   - Do not leave knob set between “PILOT” and “ON”.
9. Set the flame height to desired setting*.

TO TURN OFF GAS TO APPLIANCE

1. Set the flame adjustment knob as far clockwise as possible*.
2. Push in gas control knob slightly and turn clockwise to “OFF”. Do not force.

* The flame height can be increased or decreased by depressing the remote control hand set button.
Servicing Your Fireplace

We recommend having your fireplace serviced every year. Contact your supplier quoting the model number. It will be helpful if the appliance’s serial number can also be quoted. These numbers are on the information card. The replacement parts are shown at the end of this manual. Please always quote the part number and description when requesting spare parts.

Annual Inspection

In order to maintain the safe operation of your fireplace, contact your dealer to have a qualified technician go over the list below and make the necessary verifications at least once every year.

Safe Operation List

To be performed by a qualified technician only

1. Clean glass window with a suitable fireplace glass cleaner. Abrasive cleaners must not be used. Be careful not to scratch the glass when cleaning. See Cleaning Your Fireplace section of this manual.

2. Inspect the operation of the flame safety system Pilot or Flame rectification device.

3. Inspect and ensure the lighting of the main burner occurs within 4 seconds of the main gas valve opening. Visual inspection should match that outlined in the appliance instruction manual. Inspect primary air openings for blockage. See Checking Pilot and Burner Flame section of this manual.

4. Inspect condition of vent and vent terminal for sooting or obstruction and correct if present.

5. Vacuum and clean any debris in the firebox that is not supposed to be there.

6. Test and measure the flame failure response time of the flame safety system. It must de-energize the safety shutoff in no more than 30 seconds.

7. Check all accessible gas-carrying tubes, connections, pipes and other components for leaks. See Set up Gas Supply section of this manual.
Cleaning Your Fireplace

**WARNING**

**DO NOT TOUCH THE GLASS WHILE IT IS HOT!**
Let the fireplace cool first before cleaning it.

**Important - Glass cleaning - Mineral deposits**
One of the by-products of the combustion process in a gas appliance is a mineral which can show up as a white film on the ceramic glass of the viewing door.

The composition of the deposit varies with location and time. It is believed to be associated with the varying sulfur content of the gas. You may have the problem intermittently.

We have consulted with ceramic glass manufacturers and they cannot offer a definitive solution to this problem. Dealers have tried various cleaning products with varying results. The following are recommendations only and are not meant to guarantee results.

**NOTE:** This is a problem beyond Miles Industries’ control and is not covered under warranty.

- Clean the glass regularly as soon as you notice the buildup (white film). If the film is left for a longer period of time, it will etch into the glass. It is then much harder, if not impossible, to remove.
- **NEVER use an abrasive cleaner or ammonia-based cleaner on the ceramic glass.** Any abrasion of the surface has the immediate effect of compromising the strength of the glass. An emulsion type cleaner is recommended.
- Use a soft damp cloth to apply the cleaner. Dry the glass with a soft, dry, preferably cotton cloth. Most paper towels and synthetic materials are abrasive to ceramic glass and should be avoided.
- Our dealers have had good results from the products listed below. We cannot, however, guarantee the results of these products.
  - Brasso, Polish Plus by Kelkem, Cook Top Clean Creme by Elco, White Off by Rutland, Turtle Wax

**Do not clean the glass while it is hot!**

Always securely replace the window and the barrier screen before lighting.

If broken, the glass pane may only be replaced as a complete window unit as supplied by the manufacturer.

If the barrier becomes damaged, the barrier shall be replaced with the manufacturer’s barrier for this appliance.

Clean the window panes following the guidelines in this section.

Clean the steel trim with mild soap and warm water. Any alcohol/solvent base cleaner will weaken the coating and damage it.

Clean the barrier screen dusting it with a soft brush.

Clean the firebox ceramic logs/rocks and walls dusting them with a soft brush. Dust can also be removed from the burner using a soft brush after removing the fuel bed. **When cleaning, make sure that no particles are brushed into the slots of the burner.**

To remove the window for cleaning:
1. Unhook the front with barrier screen.
2. On the window, turn each bolt a quarter turn to disengage the bolt pin.
3. Gently pull the bottom of the window outward and unhook it from the firebox’s opening frame.
4. Set the window aside in a safe place to avoid damage.

**WARNING**

DO NOT TOUCH THE GLASS WHILE IT IS HOT!
Let the fireplace cool first before cleaning it.
To refit the window:

1. To refit the window, place the window to the firebox’s opening frame. **Make sure that the wider part of the window frame is at the bottom.** The top of the window is marked.

2. While you hold it, push in and turn the two bottom spring-loaded bolts a quarter turn to engage their pin.

3. Push in the top of the window against the firebox and fasten the two top spring-loaded bolts a quarter turn.

4. If the Hot Glass Warning plate has been removed from the front lower corner of the window, reinstall it by sliding it between the glass and the frame as indicated.

5. Reinstall the front and barrier screen.

**WARNING**

*FOR SAFETY PURPOSE,* ensure the barrier screen is re-installed on the fireplace front after maintenance.
Checking Pilot and Burner Flames

A periodic check of the pilot and burner flames should be made. Check after the fire has been on for at least 30 minutes. The pilot flame must cover the tip of the thermocouple probe. The main burner flame pattern will vary from appliance to appliance depending on the type of installation and climatic conditions.

Correct flame appearance

739LSK—Traditional Logs

739DWK—Driftwood

739RSK—Rocks

Rock fuel bed

A black discoloration may form over time at the front bottom of the 6-rock original fuel bed; this deposit can be burned off by running the fireplace on a low to medium setting fire for 30 to 45 minutes. This discoloration is unavoidable and will re-form again.

The appliance area must always be kept clear and free from combustible materials, gasoline and other flammable vapors and liquids. Inspect the vent terminal outdoors regularly to make sure that dirt, snow, insects, leaves, shrubs, trees do not obstruct it. Examine the whole vent system regularly. We recommend annually.
Replacing Batteries

**WARNING**

DO NOT ATTEMPT TO CHANGE THE BATTERIES WHILE THE FIREPLACE IS STILL HOT! Let the fireplace cool first before touching it.

**CAUTION**

DO NOT USE a screwdriver or other metallic object to remove the batteries from the receiver or the handset! This could cause a short-circuit to the receiver.

Low battery signal: see page 9.

The appliance uses four 1.5 V AA alkaline batteries for its remote control receiver and one 9 V alkaline battery for its handset. Batteries should last one to two seasons, depending on usage. Removing the batteries in the off-season will extend the battery life. Should the batteries loose power, the control may be operated by manually turning the control knob at the valve or by turning off the valve at the switch.

**To replace the batteries in the remote control receiver:**

1. The receiver is located to the left of the valve and it is retained to the firebox by a Velcro tab. Grab the receiver and pull it out from its location.
2. Slide and remove the receiver cover.
3. Replace the batteries with 4 AA alkaline batteries.
4. Replace the cover.
5. Put the receiver back in its position pushing it in so it attaches to the Velcro tab.

**Using Handset Wall Holder**

Your fireplace equipment includes a wall holder to store the handset. If it hasn’t be installed, refer to the instructions further on in this manual for the installation.
Specifications

Approval & Codes
This appliance is certified to ANSI Z21.88-2016 / CSA 2.33-2016 American National Standard / CSA Standard for Vented Gas Fireplace Heaters for use in Canada and USA, and to CGA.2.17-91 High Altitude Standard in Canada. This appliance is for gravity vent insert installations.

This appliance complies with CSA P.4.1-15 Testing method for measuring annual fireplace efficiencies.

The installation must conform to local codes or, in the absence of local codes, with the National Fuel Gas Code, ANSI Z223.1/NFPA 54 or the Natural Gas and Propane Installation Code CAN/CGA-B149.1. Only qualified licensed or trained personnel should install this appliance.

This appliance must be electrically grounded in accordance with local codes, or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70 or the Canadian Electrical Code, CSA C22.1.

*High Altitude Installations*
Input ratings are shown in BTU per hour and are certified without deration for elevations up to 4,500 feet (1,370 m) above sea level.
For elevations above 4,500 feet (1,370 m) in USA, installations must be in accordance with the current ANSI Z223.1 and/or local codes having jurisdiction. Heating value of gas in some areas is reduced to compensate for elevation—consult your local gas utility to confirm.
For installations at elevations above 4,500 feet (1,370 m) in Canada, please consult provincial and/or local authorities having jurisdiction.

Supply Gas
Heater engine 738JN is used with natural gas.
Heater engine 738JP is used with propane gas.
The supply pressure must be between the limits shown in the Ratings section above.
The supply connection is 3/8” NPT female and located on the left hand side of the control valve. The gas line entry point is on the left hand side on the fireplace.

Conversion Kits
The 738 Legend G3 is supplied as natural gas or propane gas and is field convertible between fuels. See instructions packaged with the conversion kit for further information.

Electrical
The 738 does not require an electrical power source to operate as a heater.

Floor/Hearth
This appliance is approved for installation into existing solid-fuel burning fireplaces only. Combustible material such as plywood and so on may be used for leveling and shimming beneath the unit. This appliance does not require a hearth other than to support the weight of certain fronts.

This appliance is designed and approved as a supplemental heater and provides the potential for most energy conservation when used while attended. The use of an alternate primary heat source is advisable.
This appliance, as supplied, may ONLY be installed in an existing unaltered, functioning solid-fuel burning fireplace with a working flue and constructed of non-combustible material.

This appliance is APPROVED for installation into combustible type construction only when using the 770ZCK Zero Clearance Kit (see separate instructions packaged with the kit for details).

⚠️ WARNING
Some materials or items, although safe, may discolor, shrink, warp, crack, peel, and so on because of the heat produced by the fireplace. Avoid placing candles, paintings, photos, and other items sensitive to heat around the fireplace.

⚠️ WARNING
HOT HEARTH / FLOOR! The hearth or floor in front of the fireplace may become very hot when the fireplace heats. Do not use the hearth as a seat or shelf. Solid wood flooring in front of the fireplace (if allowed) may shrink during the heating season due to heat.
Dimensions

**Dimensions**

- **28-5/8” (727 mm)**
- **19-1/2” (495 mm)**
- **12 - 14” (305 - 357 mm)**
  - Varies with outer trim options

*Optional Outer Trim or Surround sold separately*

**Cavity**

Check that masonry step does not interfere with install dimensions or vent pipe.

If mantel is combustible, see section *Clearances* for allowable clearances.

Minimum width of fireplace opening at front: **28” (711 mm)**

- **X = 12–14” (305–357 mm)**—varies with outer trim options
- **Y = 20-1/4” (514 mm)**
Some materials or items, although safe, may discolor, shrink, warp, crack, peel, and so on because of the heat produced by the fireplace. Avoid placing candles, paintings, photos, and other items sensitive to heat around the fireplace.

**WARNING**

*Measure taken from the underside of the mantel to finished hearth or surface that the unit is sitting on.

**Finishing Materials**

**Combustible materials:** Materials made of or surfaced with wood, compressed paper, plant fibers, plastics, or other material that can ignite and burn, whether flame proofed or not, or plastered or unplastered.

**Non-combustible materials:** Material which will not ignite and burn. Such materials are those consisting entirely of steel, iron, brick, tile, concrete, slate, glass or plasters, or any combination thereof.

Materials that are reported as passing ASTM E 136, Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750 °C

**HOT HEARTH / FLOOR!** The hearth or floor in front of the fireplace may become very hot when the fireplace heats. Do not use the hearth as a seat or shelf. Solid wood flooring in front of the fireplace (if allowed) may shrink during the heating season due to heat.

**Sidewall Clearances**

Minimum distance from side of appliance (liner box) to combustible wall: 9” (229 mm).

Mantel legs projecting forward less than 6” (152 mm) may be located within 5” (127 mm) of the side of the appliance (liner box).

**Floor/Hearth Clearances**

Combustible shims/supports may be used beneath the appliance to level or raise the appliance within the existing fireplace cavity.

Combustible flooring/hearths in front of the appliance are allowed provided they are no higher than the base of the appliance. Carpet, vinyl flooring should be kept back to a minimum of 12” (305 mm) from the front of the insert. The gas insert does not require a hearth.
Vent Location
The vent terminal must be located through the roof. This gravity vent appliance is designed to operate when an undisturbed airflow hits the outside vent terminal from any direction. Check local codes for allowable vertical vent termination.

Vent Materials
Use a 3" diameter aluminum flex liner approved for gas venting when installed as an insert (existing chimney). Use a 4" diameter type “B” vent when installed with a 770ZCK Zero Clearance Kit (see separate instructions packaged with the kit for details).

Venting Notes
Where possible, avoid joining flex pipe. If joints are required, use a approved connector and seal joints with RTV high temp sealant.
Horizontal offsets are permissible to allow for routing around masonry projections. Avoid bending flex pipe over a 45 degrees radius where possible.
**Only qualified licensed or trained personnel should install this appliance.**

**Installer—READ THIS FIRST**

1. **YOU NEED TO KNOW FROM THE HOMEOWNER** what accessories (surround, door, etc.) will be installed with this fireplace;
2. Unpack the appliance.
3. Check that you have everything.
5. Install venting pipe.
6. Attach conversion plate to existing fireplace.
7. Fit appliance into cavity.
8. Connect and test gas supply.
9. Install the remote control system.
10. Install liner panels and fuel bed.
11. Refit window.
12. Verify operation and adjust aeration settings.
13. Install the remote control handset wall holder.
14. **Instruct the homeowner on the operation and maintenance of the fireplace.**
15. Install the surround trim, the front and the barrier screen.
16. Install the fret if required.

---

**Existing Fireplace Preparation**

A few points must be considered before inserting the 738J into an existing fireplace cavity. Generally, no modifications are allowed to the existing fireplace that will compromise the integrity of the existing fireplace. Components that are bolted or screwed on such as dampers or baffles may be removed to accommodate the installation of the 738J engine. **Cutting away any sheet metal parts of the existing fireplace to accommodate the installation of the 738J is prohibited.** Check with local authorities if in doubt.

**Clean Fireplace and Chimney**

Have the chimney swept and the fireplace cavity including ash dumps and clean-outs cleaned before installing the 738J heater and vent liners. Any creosote or soot residue remaining in the fireplace cavity chimney or clean-out may cause odors or stains once the 738J insert is installed. Consult with chimney sweep for information on how best to clean.

**Ash Retaining Curbs**

Some fireplaces (particularly factory-built) have a raised curb at the front edge to retain ashes. Check the dimensions carefully to ensure the 738J engine will fit behind any raised curb (some curbs may be removed separately from the refractory base).

**Gas Line Routing**

Plan the routing of the gas line before proceeding. Use the existing hole for the gas line in factory-built fireplaces. If the fireplace has no access hole, carefully drill an access hole of 1.5 inch (38 mm) or less through the lower sides or bottom of the firebox. The access hole must be plugged with non-combustible insulation after the gas supply line has been installed. See Dimensions section for detailed location of gas inlet. Also, take into consideration whether or not a shut-off valve will interfere when planning routing of the gas line.

**Existing Dampers**

Factory-built, zero-clearance fireplaces will require the damper to be removed in order to install the vent liners. These dampers are usually bolted into place. Dampers in masonry fireplaces must be fixed open and may remain in place.
Existing Fireplace Preparation

Existing Glass Doors and Wire Screens
Existing glass doors must be permanently removed prior to installing the 738J insert.

Combustible Mantels
Combustible mantel clearances must conform to those required for the original solid-fuel fireplace into which the 738J is being installed.

Attach Warning Conversion Plate to Existing Fireplace (label supplied loose with 738J heater)
Attach the “This fireplace has been converted...” label to the existing fireplace using screws or other mechanical means and store any removed parts in back of the existing fireplace for future use.

Installation

Unpack the appliance
Beware of sharp edges! Wear gloves!
1. Unpack the appliance.
2. Unpack any loose items from around the appliance and check against the Pack Content list provided in the documentation package.
3. Remove the window and set aside in a safe place to avoid damage.
4. Verify that you have all the components required for the installation, including:
   - brick panels & logs;
   - surround/doors/fret;
   - venting components and accessories.

Remove Window
The window is held in place by four spring-loaded bolts, two at the top and two at the bottom.
1. To remove the window, turn each bolt a quarter turn to disengage the bolt pin.
2. Gently pull the bottom of the window outward and unhook it from the firebox’s opening frame.
3. Set the window aside in a safe place to avoid damage.
Connect Vent

IMPORTANT: This appliance’s venting system requires room air to be used in the combustion process.

1. Rough-in one 3" diameter vent liner into the existing chimney system from the roof. Be careful not to tear or damage the liner in the process. Leave plenty of liner at the bottom to facilitate the connection of the liner to the vent slider. It is best to leave the top termination until later.

2. a) Large cavity opening
   Slide the appliance into the cavity.
   b) Smaller cavity opening
   Release the two screws retaining the vent slider to the front of the firebox.
   Remove the slider from the firebox by sliding it towards the back of the firebox.

3. Secure the liner to the collar on the vent slider using 4 tapping screws.
   If the vent slider was removed from the firebox, slide the firebox onto the vent slider in the cavity taking care not to damage the liner. Make sure that the vent slider is pulled all the way forward.
   Secure the vent slider to the front of the firebox with two screws removed earlier.

4. From the roof, pull the liner and fit the flashing.

5. Fit the terminal cap. Secure with screws.

6. Seal the terminal and flashing from water penetration as required.

⚠️ WARNING
Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.
Installation

Connect Gas Supply
The gas supply inlet connection is a 3/8" NPT female connector and is located on the left hand side of the control valve.

Use only new black iron or steel pipes or copper tubing if acceptable—check local codes. Note that in USA, copper tubing must be internally tinned for protection against sulfur compounds.

The burner platform and gas train on this appliance may be removed as a unit for servicing or to install or remove the optional circulating fan (if installed). Provide some form of pipe union (depending on type of piping) as close as possible to appliance valve.

Unions in gas lines should be of ground joint type.

The gas supply line must be sized and installed to provide a supply of gas sufficient to meet the maximum demand of the appliance without undue loss of pressure.

Sealant used must be resistant to the action of all gas constituents including propane gas. Sealant should be applied lightly to male threads to ensure excess sealant does not enter gas lines.

Pressure test the supply line for leaks.

The appliance and its individual shut-off valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig (3.5 kPa).

The appliance must be isolated from the gas supply piping system by closing its equipment shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psi (3.5 kPa).

Failure to either disconnect or isolate the appliance during pressure testing may resulting regulator or valve damages and void the warranty. Consult your dealer in case of damages.

Pressure Test Points
The minimum supply pressure is given in the section Specifications of this manual—page 17.

All piping and connections must be tested for leaks after installation or servicing. All leaks must be corrected immediately.

When testing for leaks:

- Make sure that the appliance is turned off.
- Open the manual shut-off valve.
- Test for leaks by applying a liquid detergent or soap solution to all joints. Bubbles forming indicate a gas leak.

Never use an open flame to check for leaks. Correct any leak detected immediately.

The pressure test tapping locations are shown in the figure below. An internal regulator within the valve controls the burner manifold pressure. The correct pressure range is shown in the table in section Specifications of this manual on page 17. The pressure check should be made with the burner alight and at its highest setting. See Lighting Instructions section for full operating details on page 11.
Check Ignition Spark
The pilot burner and electrode unit are at the left end of the burner.
Push in the lighting knob and turn it counter-clockwise through the “IGN” position to “PILOT”. A spark should flash across from the pilot electrode to the pilot burner shield as shown below.

Connect Remote Control Receiver

**CAUTION**

**DO NOT PUT BATTERIES IN THE REMOTE CONTROL RECEIVER until the wires are connected to the burner control unit as short-circuit could result in the destruction of the electrical components.**

1. Connect the wiring harness to the receiver box, by pushing the wire connector on to the receiver circuit board. The plug will only go on one way so please ensure that the wires are pointing up and the slot in the board is in line with the tab on the wiring harness plug.

2. Connect the wires as shown. Please note that the “L” connectors are different sizes; the smaller one fits to the lower connection and the larger one the top connection on the top left hand side of the valve. The other two wire connectors can be fitted to either terminal located to the left of the flame control button.

**CAUTION**

**DO NOT USE** a screwdriver or other metallic object to remove the batteries from the receiver or the handset! This could cause a short-circuit to the receiver.

3. Remove the remote control receiver lid.

4. Fit four AA 1.5 V alkaline batteries. Refit the lid.

5. Place the remote control receiver on the base of the fireplace beside the valve.

6. Fit the 9 V alkaline battery to the handset transmitter.

Remote control operating instructions are on pages 8–9 of this manual and are supplied with the remote control kit.
**Installation**

**Adjust Fuel Bed Support (if necessary)**

The appliance is supplied with the fuel bed support already installed. All fuel beds can be used with this support.

The fuel bed support is factory-installed in a specific position and include a front flange which can be adjusted if necessary. To adjust the position of the flange, release its 3 retaining screws and move the flange as required. Tighten the screws.

Moving the flange forward will allow more impigement/glow/flame height; moving the flange backward will do the opposite.

**Note:** The rock support included with the Rock Set 739RSK it is no longer necessary; recycle or discard it.

**Install Liner Panels**

The following guidelines apply for all liners **except the 739RGL Reflective Glass Liners** which require some preparation prior to installation—see instructions packed with liners.

1. Inside the firebox, on the top of each side, release the screw of the side brick anchors (one per side) just enough to allow them to rotate.

2. Place the rear panel against the back of the firebox, on the ledge at bottom.

3. Rotate the anchor up and out of the way and slide the left hand side panel against the firebox side.

   **The panel should be parallel to the edge of the burner plate.** Rotate the anchor back down to hold the panel.

   - Side panels should be parallel to edge of burner plate
   - Rotate anchor up and insert panel
   - Position of panel in relation to burner plate
4. Rotate the anchor up and out of the way and slide the right hand side panel against the firebox side. The panel should be parallel to the edge of the burner plate. Rotate the anchor back down to hold the panel.

5. Tighten the side brick anchors on each side of the firebox.
Install 739LSK Traditional Logs

Unpack the ceramic logs very carefully to avoid damaging the fragile material. Install the logs as shown below. Please note that the position of the logs is critical to ensure proper performance of the appliance.

1. Place the rear log on the sheet metal support centering it side to side in the firebox. Pull it forward until the notch in the underside of the log sits against front edge of the sheet metal support.

2. Place the top left log on the pin of the rear log. The bottom of the log rests against the left of the pilot shield and slightly above.

3. Place the front left log on the burner. Slide it to the left against the top left log. The narrow end should rest in the notch in the rear log.

4. Place the front right log on the burner and slide it to the left against the front left log.
5. Locate the top right log on the two pins on the right side of the rear log. Ensure a tight fit against the flat area around the pins in the rear log.

6. Place the lower end of the center right log onto the pin on the front right log. Rest the narrow end in the notch into the rear log.

7. Pour some ceramic loose coals on each side of the logs to hide the sheet metal work. Do NOT put any coal into the pilot area.
Install 739RSK Ceramic Rocks

Unpack the ceramic rocks kit very carefully to avoid damaging the fragile material. Install the components as shown below. Please note that the position of the rocks and twigs (if used) is critical to ensure proper performance of the appliance.

1. Install the Front Support Platform in the firebox carefully sliding it down between the burner and the front bottom edge for the firebox while avoiding scraping the side ceramic panels.

2. Place the rock ceramic base on the log support behind the burner. The front bottom of the base must rest against the lip of the support.

3. Install the ceramic platform in the firebox rotating down to insert the front first behind the Front Support. Lay the back of the ceramic platform against the rear ceramic panel again being careful not to scrape the ceramic panels.

Warning: This platform is quite fragile. DO NOT force it in place.
4. The underside of each ceramic rock is identified by a number and a specific protruding positioning triangle. Install the six rocks from left to right starting with rock no. 1.

5. Place the glass panel in its cavity formed by the Front Support and the Ceramic Platform.

A black discoloration may form over time at the front bottom of the 6-rock original fuel bed; this deposit can be burned off by running the fireplace on a low to medium setting fire for 30 to 45 minutes. This discoloration is unavoidable and will re-form again.

6. Place the left twig across the second and third rocks from the left; rest its end on the glass near the edge of the platform as shown below. Make sure to leave a gap between the twig and the first rock to allow flame to come up between the twig and the rock.

7. Place the right twig across the second and third rocks from the right; rest its end on the glass about 1 cm from the edge of the platform as shown below. Make sure to leave a gap between the twig and the first rock to allow flame to come up between the twig and the rock.
Install 739DWK Driftwood Kit
Unpack the driftwood kit very carefully to avoid damaging the fragile material. Install the components as shown below. Please note that the position of the logs and pebbles (if used) is critical to ensure proper performance of the appliance.

Platform
Place the platform into the firebox on top of the burner.

Logs
1. Identify the base log and place it in the cavity of the ceramic platform. The protruding parts of the log in the front should rest against the lip of the sheet metal log support behind the burner.

2. Identify the rear log and place it on top of the base log locating it into the notches on top of the log. Pull the log forward so it is locked in position.

3. Place the front log inserting its two pins into the two holes at the front of the platform. The ends of the log should be oriented towards the front as the log should not hang over the inside edge of the platform.
4. Identify the right side cross log, the longest, and place it across the rear log. The narrow end of the log rests in a notch of the rear log. The wide end of the log lays flat on the platform, flush with the edge as indicated.

5. Identify the left side cross log which has one pin at one end. Insert the pin in the hole at the front left of the platform and rests the top part of the log into the notch of the rear log as indicated.

Pebbles
Six pebbles are supplied as decorative elements. If used, they should be placed on the platform only. We suggest to place the larger ones to cover the inside edge corners of the platform and place others randomly. Not all of them have to be used.
Re-install and Check Window

1. To refit the window, hook its top part to the firebox’s opening frame. **Make sure that the wider part of the window frame is at the bottom. The top part is marked.**

2. While you hold it, push in and turn the two top spring-loaded bolts a quarter turn to engage their pin.

3. Push in the bottom of the window against the firebox and fasten the two bottom spring-loaded bolts a quarter turn.

4. If the Hot Glass Warning plate has been removed from the front lower corner of the window, reinstall it by sliding it between the glass and the frame as indicated.

Check Operation

Turn the fireplace flame up and down using the remote control to confirm that the full range of inputs is achieved—see the remote control operation instructions on pages 8–9.

Adjust Aeration (if necessary)

Light the fire and allow the unit to warm up for 10–15 minutes to evaluate the flame picture. Burners are equipped with an adjustable shutter to control primary aeration. See the figures below. The shutters are factory-set to an aeration gap which will give optimum performance for the vast majority of installations.

**Increasing aeration (open)** will cause the flames to appear more transparent and blue showing more ceramic log glow.

**Decreasing aeration (close)** will cause the flames to appear more yellow or orange showing less ceramic log glow.

**Too little aeration may result in black carbon forming and dropping into the firebox.**

Air Shutters

![NG Air Shutter Slider & Cover](image)

**Natural Gas**

- **Close**
- **Open**

![Propane Gas Air Shutter Slider](image)

**Propane Gas**

- **Close**
- **Open**

Depending of fuel bed used, altitude and other considerations, the flame picture may be improved by adjusting the aeration. The need for adjustment should be determined only by operating the appliance with the fuel bed, liners and window installed and evaluating the flame picture after a 15-minute warm-up.
Install Front, Trim and Barrier Screen
Install the front and trim chosen by the customer for their fireplace. Install as well the barrier screen which is provided with the front.
Show the customer remove the front and also how to access the controls when the front is installed.
Follow the instructions provided with the front et trim and leave those instructions behind for the customer’s further reference.

Install Handset Wall Holder
The remote control kit for this fireplace comes complete with a wall-mounted holder. This holder is not required in all installations but is provided as an optional feature for those customers who wish to mount the remote handset to the wall.
To install the holder to the wall, find a convenient location and use the hardware provided with the kit. See the diagram below for required hardware and configurations. Note that the holder can be installed at the base of a light switch plate.
IMPORTANT. The location of the remote control handset is important to assure proper temperature regulation. To obtain a constant temperature, we recommend that the handset should be between 3 and 15 feet away from the appliance but not directly above it. We also advise that the handset should be located away from any other heat source and not in direct sunlight as this may affect the temperature sensor located in the remote handset.
Warranty

If you have a problem with this unit, please contact your dealer or supplier immediately. Under no circumstances should you attempt to service the unit in any way by yourself. The warranties in paragraphs 1 and 2 are provided only to the initial owner of this unit, are not transferable and are subject to the conditions and limitations in paragraphs 3, 4 and 5. Please review the conditions and limitations carefully and strictly follow their requirements.

1. Extended Warranty Coverage
For a period of up to ten (10) years, Miles Industries Ltd., (the “Company”) or its appointed distributor will at its option pay the initial owner for the repair of, or will exchange the following parts or components which are found to be defective in material or workmanship under normal conditions of use and service:

2. Two-Year Parts Warranty
In addition, for two (2) years from the date of purchase, the Company, at its option, can repair or exchange all parts and components not listed above but that are found to have a *bona fide* defect in material or workmanship under normal conditions of use.

3. Conditions and Limitations
a) The warranty registration card must be completed by the initial owner and returned to the Company within 90 days of purchase. Alternatively, the warranty registration form may be filled out online at www_valorfireplaces_com.
b) Installation and maintenance must be performed by an authorized and trained dealer in accordance with the Company’s installation instructions.
c) This warranty is void where installation of the unit does not conform to all applicable codes including national and local gas appliance installation codes and building and fire codes.
d) The owner must comply with all operating instructions.
e) The Company is not responsible for the labor costs to remove defective parts or re-install repaired or replacement parts.
f) The initial owner of the unit will be responsible for any shipping charges for replacement parts as well as travel time incurred by the dealer to perform the warranty work.
g) This warranty applies to non-commercial use and service and is void if it is apparent that there is abuse, misuse, alteration, improper installation, accident or lack of maintenance to the unit.
h) This warranty does not cover damage to the unit due to:
   i) Improper installation, operational or environmental conditions.
   ii) Inadequate ventilation in the area or competition for air from other household equipment or appliances.
   iii) Chemicals, dampness, condensation, or sulphur in the fuel supply lines which exceeds industry standards.
i) This warranty does not cover glass, log breakage or damage to the unit while in transit.
j) The Company does not allow anyone to extend, alter or modify this warranty and assumes no responsibility for direct, indirect or consequential damages caused by the unit. State or provincial laws where the first purchaser or user resides may provide specific rights to extend this warranty and, if so, the Company’s sole obligation under this warranty is to provide labor and/or materials in accordance with those laws.

4. Discharge of Liability
After two (2) years from the date of purchase, the Company may, at its option, fully discharge all obligations under this warranty by paying to the first owner the wholesale price of any defective parts.

5. No Other Warranty
All obligations to repair this unit are defined in this warranty. Some states or provinces may specifically mandate additional warranties on the part of manufacturers, but in the absence of such specific legislation, there is no other warranty or obligation expressed or implied.
