WARNING: If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

WHAT TO DO IF YOU SMELL GAS

• Do not try to light the appliance.
• Do not touch any electrical switch; do not use any phone in your building.
• Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
• If you cannot reach your gas supplier, call the fire department.

Installation and service must be performed by a qualified installer, service agency or the gas supplier.

PLEASE READ THIS MANUAL BEFORE INSTALLING AND OPERATING THIS APPLIANCE.

This appliance may be installed in an after-market permanently located, manufactured (mobile) home where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

This appliance is a domestic room-heating appliance. It must not be used for any other purposes such as drying clothes, etc.

This appliance is suitable for installation in a bedroom or bed sitting room.

Massachusetts: The piping and final gas connection must be performed by a licensed plumber or gas fitter in the State of Massachusetts. Also, see Carbon Monoxide Detector requirements under “Safety and Warning Information” on page 5.
Thank You ...

For purchasing a Valor Madrona. Your new radiant gas heater is a technical appliance that must be installed by a qualified dealer. Each Madrona is fully tested during the production process for your safety and comfort.

Your unit has been professionally installed by:

Dealer Name ________________________________

Phone Number ________________________________

Should you encounter an operational problem, call your dealer immediately. Do not try to repair the unit as you may cause an injury or damage the fireplace.

The information contained in this installation manual is believed to be correct at the time of printing. Miles Industries Ltd. reserves the right to change or modify any information or specifications without notice. Miles Industries Ltd. grants no warranty, implied or stated, for the installation or maintenance of your heater, and assumes no responsibility for any consequential damage(s).

We recommend that our gas hearth products be installed and serviced by professionals who are certified in the United States by NFI (National Fireplace Institute®).

---

**WARNING**

- **HOT GLASS** WILL CAUSE BURNS.
- **DO NOT TOUCH** GLASS UNTIL COOLED.
- **NEVER** ALLOW CHILDREN TO TOUCH GLASS.
READ and UNDERSTAND all instructions carefully before starting the installation. FAILURE TO FOLLOW these installation instructions may result in possible fire hazard and will void the warranty.

Prior to the first firing of the fireplace, READ the Owner’s Information section of this manual.

DO NOT USE this appliance if any part has been under water. Immediately, CALL a qualified service technician to inspect the unit and to replace any part of the control system and any gas control that has been under water.

THIS UNIT IS NOT FOR USE WITH SOLID FUEL.

Installation and repair should be PERFORMED by a qualified service person. The appliance and venting system should be INSPECTED before initial use and at least annually by a professional service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding, etc. It is IMPERATIVE that the unit’s control compartment, burner, and circulating air passageways BE KEPT CLEAN to provide for adequate combustion and ventilation air.

Always KEEP the appliance clear and free from combustible materials, gasoline, and other flammable vapors and liquids.

NEVER OBSTRUCT the flow of combustion and ventilation air. Keep the front of the appliance CLEAR of all obstacles and materials for servicing and proper operation.

Due to the high temperature, the appliance should be LOCATED out of traffic areas and away from furniture and draperies. Clothing or flammable material SHOULD NOT BE PLACED on or near the appliance.

Children and adults should be ALERTED to the hazards of high surface temperature and should STAY AWAY to avoid burns or clothing ignition. Young children should be CAREFULLY SUPERVISED when they are in the same room as the appliance.

This unit MUST be used with a vent system as described in this installation manual. NO OTHER vent system or components MAY BE USED.

This gas fireplace and vent assembly MUST be vented directly to the outside and MUST NEVER be attached to a chimney serving a separate solid fuel burning appliance. Each gas appliance MUST USE a separate vent system. Common vent systems are PROHIBITED.

INSPECT the external vent cap on a regular basis to make sure that no debris, plants, trees, shrubs are interfering with the air flow.

The glass door assembly MUST be in place and sealed before the unit can be placed into safe operation.

DO NOT OPERATE this appliance with the glass door removed, cracked, or broken. Replacement of the glass door should be performed by a licensed or qualified service person. DO NOT strike or slam the glass door.

The glass door assembly SHALL ONLY be replaced as a complete unit, as supplied by the fireplace manufacturer. NO SUBSTITUTE material may be used.

DO NOT USE abrasive cleaners on the glass door assembly. DO NOT ATTEMPT to clean the glass door when it is hot.

TURN OFF the gas before servicing this appliance. It is recommended that a qualified service technician perform an appliance check-up at the beginning of each heating season.

Any safety screen or guard removed for servicing MUST BE REPLACED before operating this appliance.

DO NOT place furniture or any other combustible household objects within 36” of the fireplace front.

BE CAREFUL not to put any decorating objects sensitive to heat on the stove or too close to the stove as it gets very hot when operating.

DO NOT use this heater as a temporary source of heat during construction.

NOTE: When operating your new fireplace for the first time, some vapors may be released due to the burning of curing compounds used in the manufacture of the appliance. They may cause a slight odor and could cause the flames to be the full height of the firebox, or even slightly higher, for the first few hours of operation. It is also possible that these vapors could set off any smoke detection alarms in the immediate vicinity. These vapors are quite normal on new appliances. We recommend opening a window to vent the room. After a few hours’ use, the vapors will have disappeared and the flames will be at their normal height.
Safety & Warning Information

**California**

**State of California. Proposition 65 Warning.** Fuels used in gas, wood-burning or oil fired appliances, and the products of combustion of such fuels, contain chemicals known to the State of California to cause cancer, birth defects and other reproductive harm. *California Health & Safety Code Sec. 25249.6.*

**Massachusetts**

**State of Massachusetts Carbon Monoxide Detector/Vent Terminal Signage Requirements**

For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

1. **INSTALLATION OF CARBON MONOXIDE DETECTORS.** At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gasfitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gasfitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.

   a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.

   b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. **APPROVED CARBON MONOXIDE DETECTORS.** Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

3. **SIGNAGE.** A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, “GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS”.

4. **INSPECTION.** The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.
(b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

1. The equipment listed in Chapter 10 entitled “Equipment Not Required To Be Vented” in the most current edition of NFPA 54 as adopted by the Board; and

2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

1. Detailed instructions for the installation of the venting system design or the venting system components; and

2. A complete parts list for the venting system design or venting system.

(d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies “special venting systems”, the following requirements shall be satisfied by the manufacturer:

1. The referenced “special venting system” instructions shall be included with the appliance or equipment installation instructions; and

2. The “special venting systems” shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.
Specifications

Approval & Codes

This appliance is certified to ANSI Z21.88b-2008 / CSA 2.33b-2008 Vented Gas Fireplace Heater standard for use in Canada and USA, and to CGA 2.17-91 High Altitude Standard in Canada. This appliance is for direct vent installations.

Conversion between fuels may only be done using the approved conversion kits listed on page 33. This appliance complies with CGA P.4.1 Testing method for measuring annual fireplace efficiencies.

The installation must conform to local codes or, in the absence of local codes, with the National Fuel Gas Code, ANSI Z223.1 or the Natural Gas and Propane Installation Code CAN/CGA-B149. Only qualified licensed or trained personnel should install this appliance.

This appliance, when installed with the optional circulating fan kit (blower), must be electrically grounded in accordance with local codes, or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70 or the Canadian Electrical Code, CSA C22.1.

*High Altitude Installations

Input ratings are shown in BTU per hour and are certified without deration for elevations up to 4,500 feet (1,370 m) above sea level.

For elevations above 4,500 feet (1,370 m) in USA, installations must be in accordance with the current ANSI Z223.1 and/or local codes having jurisdiction. Heating value of gas in some areas is reduced to compensate for elevation—consult your local gas utility to confirm.

For installations at elevations above 4,500 feet (1,370 m) in Canada, please consult provincial and/or local authorities having jurisdiction.

Supply Gas

Heater engine MF28EN is used with natural gas.
Heater engine MF28EP is used with propane gas.
The supply pressure must be between the limits shown in the Ratings section above.
The supply connection is 3/8” NPT female.

Electrical

The Madrona stove does not require an electrical power source unless it is fitted with an optional circulating fan—see page 19.

Dimensions & Clearances

Hearth Requirements

This unit is approved for mounting directly on combustible wood flooring. If installed directly on carpeting, vinyl or soft combustible floor other than wood, it must be installed on a metal or wood panel covering a minimum surface of 15” deep by 28” width.
Dimensions & Clearances

Clearances

**Corner clearances**
- Min. 5" between combustible wall and stove

**Wall clearances**
- Min. 5" between combustible wall and rear of stove
- Min. 6" between combustible wall and side of stove
- 17-7/8" to 28-1/2"

**Mantel / shelf clearances**
- Maximum 26" from wall for projection of combustible mantel or shelf
- Minimum 12" between stove and combustible mantel or shelf
- 5" between combustible wall and back of stove
- 30-1/2" minimum

**Alcove clearances**
- 40-1/2" minimum
- 43-1/2" minimum
- 26" maximum

Keep a minimum of 36" of space in front of stove free of furniture or object.
### Venting

**Top / Rear Outlet**
This unit is shipped with a top outlet collar which is field-convertible to rear outlet—see page 20 for details.

**Vent Material**
This unit is approved for installation using 4” x 6-5/8” co-axial direct vent pipe and accessories manufactured by Simpson Dura-Vent, Security and Selkirk—see list of approved venting pipes and accessories on pages 34–35.

This unit may also be converted to co-linear (2–3”) venting (rear vent only) for use in solid-fuel burning fireplaces and chimneys using adapters and accessories—see list of approved venting pipes and accessories on pages 34–35. Instructions for co-linear conversion are packaged with the co-linear adapter.

Do not mix components from different vent manufacturers, with the exception of Valor’s 551DVK Horizontal Termination Kit which can be used in combination with approved manufacturers’ venting pipes listed on pages 34–35. Follow the installation instructions supplied with the individual venting components.

**Wall Thickness**
The appliance vent is suitable for penetrating a combustible wall assembly up to 14” (36 cm) in thickness. A non-combustible wall can be of any thickness up to the maximum horizontal run of vent pipe allowed for the particular installation.

**Framing Vent in Combustible Walls & Ceilings**
When penetrating through combustible walls and ceilings, frame a minimum of 10” x 10” opening to ensure that the insulation is kept clear of the vent pipe. Also, seal all joints between the wall plates, the wall and the vent pipe. Follow the installation instructions supplied with the individual venting components.

**Important Installer Notice – Weather Sealing & Vapor Barriers**
It is the installer’s responsibility to ensure that vent installations through exterior walls are caulked and weatherproofed in such a manner as to:

- Prevent rain water from entering the wall from the weather side by adequately caulking the outer vent plate to the exterior wall surface.
- Prevent moisture inside the home from penetrating into the wall structure by ensuring the inside wall plate is adequately sealed to the inside vapor barrier.
- Prevent rain water and moisture from entering the walls by sealing the joints between the outer vent tube and the inner and outer wall plates.

We recommend the use of a high quality polyurethane sealant.
**Venting**

**Typical Venting Components**

See list of approved venting pipes and accessories on pages 34–35.

Maximum pipe length:
- 24” (straight out with snorkel)
- 14” (45° elbow out with snorkel)

Snorkel required (min. 14” high) with horizontal run through the wall (no rise)

No more than one 45° elbow allowed

Through wall (without vertical rise)

Through wall (with vertical rise)

Through roof
Venting

The chart below applies to top or rear outlet, roof or wall termination with a vertical rise. All rear outlet venting without a vertical rise must be terminated by a snorkel.

1. The total length of the vent pipe cannot exceed 40’ (12.2m).
2. The minimum vertical height with roof termination is 8’ (2.45 m).
3. Any combination of rise and run can be used as long as they are within the allowable limits shown on the chart below.
4. A maximum of 5 x 90° elbows—or equivalent (2 x 45° = 90°)—can be used.
5. Each 90° elbow installed on the horizontal plane is equivalent to a 3’ horizontal pipe; therefore, 3’ must be subtracted from allowable horizontal run. (45° elbow is equivalent to 18” horizontal pipe.)
6. All horizontal pipe runs must be graded 1/4” per foot upwards in the direction of the exhaust flow.
7. Co-linear rear venting in existing chimney systems is limited to 40’ vertical rise.
8. Restrictors are not required for co-linear installations.

Example 1
V Value = V1 (6’) + V2 (6’) + V3 (2’) = 14’
H Value = H1 (3’) + H2 (3’) = 6’
75% restrictor required

How to Read the Venting Chart

- 3” clearance to combustible above horizontal pipe
- 1” clearance to combustible at bottom and sides of horizontal pipe
- 1” clearance to combustible around vertical pipe
- 1” clearance before and after elbow

Restrictor 75
Restrictor 50
Restrictor 0

Allowable Vent Configurations

Not to scale

Miles Industries
**Venting**

**Restrictors**

**SOME INSTALLATIONS REQUIRE RESTRICTORS.** For improved flame picture and performance, this unit is supplied with two different sets of vent restrictors. The level of restriction required depends on the vertical rise in the venting system and, to a lesser degree, the horizontal run and number of elbows.

The amount of restriction is based on laboratory tests. The ideal restrictor position may vary slightly, especially when the vent pipe length is near the limits of the acceptable configurations for each type of restrictors.

The chart on the previous page shows the vent restrictor required relative to the length of the vent pipe. Restrictors are not required for co-linear applications.

To install restrictors:
1. Remove every second screw from the exhaust ports in the top of the firebox.
2. Install the restrictors with the removed screws.
Venting

**Horizontal Vent Termination**
- The vent terminal must be located on an outside wall or through the roof.
- This direct vent appliance is designed to operate when an undisturbed airflow hits the outside vent terminal from any direction.
- The minimum clearances from this terminal that must be maintained when located on an outside wall are shown in the figure below. Any reduction in these clearances could result in a disruption of the airflow or a safety hazard. Local codes or regulations may require greater clearances.
- The vent terminal must not be recessed into a wall or siding.
- The vent terminal should be positioned where it will not be covered by snowdrifts.
- Sidewall vent terminations within 7' of grade require a terminal guard when using a 551DVK.

Installation

**Fan (Blower)**

Allow for and install electrical wiring if there will be a blower to install. Ask the homeowner if you are not sure.

**Venting Configuration**

This unit is supplied with a top outlet and is field convertible to a rear outlet. Plan routing of vent taking into consideration stove and vent clearances, allowable vent terminal locations BEFORE cutting a hole in the roof or wall. Avoid penetrating the wall/roof at structural members.

**Gas Line Routing**

Consider visibility of shut-off valve or step-down regulators, etc. when planning gas line routing.

Packs Contents—Appliance & Castings

The Madrona Stove is supplied in three (3) cartons.
- In one carton is the engine.
- In a second carton are the casting sides, the top and the legs.
- In a third carton are the casting front and base.

Unpack the cartons carefully. **We strongly recommend that you leave the engine sitting on the packaging base in which it came to avoid damaging the control valve, wires and pipes already attached to the engine.**

Some parts are packed in the cardboard sleeve around the engine; make sure you take them all out of the packaging. The engine carton contains a list of all components included in the three cartons. Make sure you have all the components before you start the installation.

**WARNING!**

**LEAVE ENGINE ON PACKAGING BASE to avoid damage to the control valve, wires and pipes.**
Appliance Preparation

Window & Log Pack

1. Release the spring bolts at top and bottom of the window by pushing and turning 1/4 turn.
2. Lift the window and set it aside in a safe place to avoid damage.
3. Remove the log pack from inside the firebox and set it aside with the window. Please handle the logs carefully as they are made of fragile material and can easily be damaged.

Casting Base

1. Rough-in the gas line and electrical wiring for a fan (if any).
2. Decide where the stove should be positioned to avoid moving it once all the casting pieces are attached together.
3. Place the casting base upside down. Unscrew the bolts to insert the legs.
4. Slide each leg under the head of its bolt.
5. Tighten the bolts securely with a wrench.

6. Fix the casting base to the floor or hearth using bolts (not supplied) through the casting feet—see the bolting pattern below. (Required for mobile homes only).

Appliance’s foot print

Detail
Appliance Preparation

**Engine**  Flip the base upside-down. Place the engine on the base at its approximate final position—see detail below. Center the engine using the holes at front of the base as guidelines.

**Casting Side Panels**  On the casting side panels, release the top and bottom screws.
1. Drop a hinge pin on the back corner of base and drop the side panel on the pin.
2. Rotate the panel towards the engine.
3. Repeat with the other casting side panel.
Appliance Preparation

Fixing Casting Side Panels & Engine
1. Adjust the position of the engine to locate the top and bottom screws of the side panels into the slots of the engine’s side bracket. Tighten the top and bottom screws.
2. Adjust the engine as required and fix it to the casting base at bottom of its side brackets with the nuts and bolts provided.

Lighting Instructions Plate
The lighting instructions plate is attached to the back of the engine and may have slid out of its slot. Reposition the plate if this is the case.

Remote Control Receiver
Under the engine, the receiver box is clipped to the burner pipes to facilitate transportation. Unclip the box and let it hang while you fit the gas pipe.

Receiver hooked to burner pipes

Gas Pipe & Connector
Fit the pipe and connector supplied with the engine to the valve. Connect the gas line to the inlet pipe.

3/8” gas line connection
5/16” flare
Appliance Preparation

Receiver Position

Once the gas pipe is fitted, clip the receiver on top of the casting crossbar on the base, to the left hand side of the valve. Make sure the receiver box is oriented with its wires towards the back and its sensor at the front.

Optional Fan (Blower)

If the Circulating Fan Kit (blower) is to be installed, we suggest that you do it now.

1. Take the fan out of its package.
2. Remove the mounting plate from the fan and discard it.
3. Position the fan in such a way that its exhaust is directed upwards, towards the space between the inner and the outer walls of the firebox.
   NOTE: You may need to remove the burner to access the back of the stove. If this is the case, first remove the rear log support (NG/LPG) and the front log support (LPG), and then, the burner.
4. Using 3 screws, fix the fan to the firebox bracket.
5. Fix the fan control box bracket provided to the control box with 2 screws.
6. Fix the bracket, with the control box attached, to the casting base of the stove from underneath.
7. With 2 screws from the burner plate, fix the fan’s thermoswitch to the underside of the burner plate, behind the pilot area.
8. See instructions with the 555CFK kit for complete details.
Appliance Preparation

Venting Outlet
If the appliance is to be vented from the top, it is ready for vent installation once the engine is on the casting base.
If the appliance is to be vented from the rear, it must be converted. Follow these simple steps:
1. Remove the following parts in this order:
   a. Dura-Vent collar, gasket and intake plate from the top of the appliance (22 screws of the intake plate and 2 rear screws of the collar);
   b. Exhaust collar (8 screws).

   NOTE: The gaskets are glued to the engine or the intake plate; it is not necessary to separate them from the parts they are attached to. However, if they need to be manipulated, BE CAREFUL not to damage them because their material is fragile.

2. Re-install through the vent opening at the rear of the firebox in the reverse order in which you took the parts out.

Co-linear Applications
For conversion of top or rear outlet collars to co-linear (2 x 3") rear venting, refer to instructions packaged with the 556CLA Co-linear Adapter.
NOTE: Co-linear venting may only be installed into solid-fuel burning fireplaces and chimneys.

Top Spar
1. Position the top spar on the side brackets located between the engine and the cast sides.
2. Fix the spar with four 3/8" pre-assembled screws provided.
Supply Gas

**Connector**
- The gas supply inlet connection is a 3/8" NPT female connector. For detailed location of this connector see drawing on page 7. If a circulating fan or isolating valve is to be installed, adjust the routing of the gas line to suit.

**Pipes**
- Use only new black iron or steel pipes or copper tubing if acceptable—check local codes. *Note that in USA, copper tubing must be internally tinned for protection against sulfur compounds.*

**Unions**
- Unions in gas lines should be of ground joint type.

**Supply Line Size**
- The gas supply line must be sized and installed to provide a supply of gas sufficient to meet the maximum demand of the appliance without undue loss of pressure.

**Sealant**
- Sealant used must be resistant to the action of all gas constituents including LP gas. Sealant should be applied lightly to male threads to ensure excess sealant does not enter gas lines.

**Manual Shut-off Valve & Union**
- The supply line should include a manual shut-off valve and union to allow the appliance to be disconnected for servicing.
- Pressure test the supply line for leaks.

**Test Pressures**
- **>1/2 psig (3.5kPa)**
  - The appliance and its individual shut-off valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig (3.5kPa).
- **≤1 psig (3.5kPa)**
  - The appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.5kPa).

**Possible Damages**
- Failure to either disconnect or isolate the appliance during pressure testing may result in regulator or valve damages and void the warranty. Consult your dealer in case of damages.

**Minimum Pressure**
- The minimum supply pressure is given in the Ratings section of this manual—page 7.

**Leak Test Mandatory**
- All piping and connections must be tested for leaks after installation or servicing. All leaks must be corrected immediately.
- When testing for leaks:
  - Make sure that the appliance is turned off.
  - Open the manual shut-off valve.
  - Test for leaks by applying a liquid detergent or soap solution to all joints. Bubbles forming indicate a gas leak. **Never use an open flame to check for leaks.** Correct any leak detected immediately.

**Test Tapping Location**
- The pressure test tapping locations are shown in the figure above. A built-in non-adjustable regulator controls the burner manifold pressure. The correct pressure range is shown in the table in Ratings section of this manual on page 7. The pressure check should be made with the burner alight and at its highest setting. See lighting instructions section for full operating details on page 31.
Ceramic Logs

The ceramic logs are supplied in two packages. Unpack them very carefully to avoid damaging the fragile material. Install the logs as shown below. Please note that the Rear and Front Logs will have a different position depending of the gas type. The position of the Logs is critical to insure the good performance of the appliance.

1. NG ONLY: Drop Rear Log into place behind front log retainers.
2. LPG ONLY: Drop Rear Log into place centered side-to-side against back support.
3. Place RH Cross Log onto locating pins
4. Place Middle Cross Log across gap in the Front Log
5. Place LH Cross Log onto locating pins

Front Log locating pins
Front Log support (LPG ONLY)

Rear Log touches Front Log here (NG only)
Right Log locating pins

Place Front Log onto locating pins at each end of the burner.
LPG only: Pull Log forward on Front Log support

LH Log Locating Pins

Place LH Cross Log onto locating pins

Front Log Support (LPG ONLY)
**Window Refitting**

To refit the window, place it on the firebox frame and hold it in place while pushing and turning its fastening studs 90 degrees. Then, apply light hand pressure against the window frame sides to bed-in the window seal.

**Initial Remote Control Set-up**

The receiver and the handset of the remote control system must be initially synchronized before the first use.

1. Insert batteries in the remote control receiver and handset. The receiver is located left of the control valve under the burner module.
2. With a sharp object, press and hold the receiver’s reset button until you hear two (2) acoustic signals. After the second, longer acoustic signal, release the reset button.
3. Within the subsequent 20 seconds, press the (small flame) button on the remote handset until you hear an additional long signal confirming the synchronization is set.

This is a one time setting only and is not required when changing the batteries in the remote receiver. The remote control system is now ready to use.
Operation Check & Aeration Settings Adjustment

Operation Check
Turn the fireplace flame up and down using the remote control to confirm that the full range of inputs is achieved—see the remote control operation instructions on pages 27–29.

Aeration Settings
Light the fire and allow the unit to warm up for 10–15 minutes to evaluate the flame picture. The burner is equipped with an adjustable shutter to control primary aeration. See the figures below. The shutter is factory-set to an aeration gap which will give optimum performance for the vast majority of installations. In a few unusual installations, the flame picture may be improved by adjusting the aeration. The need for adjustment should be determined only by operating the appliance with the ceramic logs and window installed.

**Increasing aeration** will cause the flames to appear more transparent and blue making the ceramic logs glow more.

**Decreasing aeration** will cause the flames to appear more yellow or orange making the ceramic logs glow less.

*Too little aeration may result in black carbon forming and dropping into the firebox.*

Air Shutter

Front & Top Installation

Front Installation
Hook the cast front to the side brackets located between the engine and the cast sides.
Front & Top Installation

Top Casting
Place the top casting piece on the top of the stove ensuring the rear edge is flush with the rear edge of the cast side panels. Fill in the vent space with the infill plate if using a rear vent. To level the top casting, unscrew the levelling bolts on the top rear of each casting side panel as appropriate.

Removeable Fret
To access the gas valve and the remote control receiver, the fret can be removed without removing the front casting. Once the stove has cooled down and with extra care not to hit the glass of the window, simply slide the fret out of its brackets, angle it up and remove it. To put it back in place, proceed in the reverse order.

Remote Control Handset Wall Holder Installation
The remote control kit for this fireplace comes complete with a wall-mounted holder. This holder is not required in all installations but is provided as an optional feature for those customers who wish to mount the remote handset to the wall.
To install the holder to the wall, find a convenient location and use the hardware provided with the kit. See the diagram for required hardware and configurations. Note that the holder can be installed at the base of a light switch plate.

IMPORTANT. The location of the remote control handset is important to assure proper temperature regulation. To obtain a constant temperature, we recommend that the handset should be between 3 and 15 feet away from the appliance but not directly above it. We also advise that the handset should be located away from any other heat source and not in direct sunlight as this may affect the temperature sensor located in the remote handset.
Owner’s Information

Operating Your Stove

For your safety, this appliance is fitted with a flame supervision device which will shut-off the gas supply if, for any reason, the pilot flame goes out. This device incorporates a fixed probe, which senses the heat from the pilot flame. If the probe is cool, the device will prevent any gas flow unless the MAN knob is in position MAN and the metallic core on the valve is pushed in. See full lighting instructions on page 31 of this manual.

WARNING: Your stove becomes very hot when operating. Avoid placing decorative objects sensitive to heat on the stove or within 36” around it.

Cleaning

It will be necessary to clean the glass periodically. During startup, condensation, which is normal, forms on the inside of the glass and causes dust and lint to cling to the glass surface. Initially, paint, while curing, may deposit a slight film on the glass. We therefore recommend that, during the first few weeks of use, the glass be cleaned two or three times with non-abrasive common household cleaners (such as dish soap) and warm water. Ammonia based cleaners should NOT be used.

Subsequently, the glass should be cleaned two or three times a season depending on the circumstances. Do not clean the glass while it is hot. Always securely replace the window before lighting. If broken, the glass pane may only be replaced as a complete window unit as supplied by the manufacturer.

To remove the window for cleaning, rotate its four fastening studs 90 degrees to release and gently pull the window unit outwards—see page 16. Set aside in a safe place to avoid damage.

To refit the window, place it on its frame and hold it in place while pushing and turning its fastening studs 90 degrees. Then, apply light hand pressure against the window frame sides to bed-in the window seal—see page 23.

Dust can be brushed from the ceramic logs and firebox walls after removing the front unit and opening the window. Dust can also be removed from the burner using a soft brush after removing the ceramic logs. When cleaning, make sure that no particles are brushed into the slots of the burner.

Checks

Performance of LPG appliances may be affected by the quality of commercial gas supplied in your area.

A periodic check of the pilot and burner flames should be made. Check after the fire has been on for at least 30 minutes. The pilot flame must cover the tip of the thermocouple probe. The main burner flame pattern will vary from appliance to appliance depending on the type of installation and climatic conditions.

The appliance area must always be kept clear and free from combustible materials, gasoline and other flammable vapors and liquids.

Inspect the vent terminal outdoors regularly to make sure that snow, trees, bushes, leaves, or other objects do not obstruct it.

Examine the vent system and terminal regularly. We recommend annually.

Correct Flame Picture
Owner’s Information

Batteries

The appliance uses four 1.5 V AA batteries for its remote control receiver and one 9 V battery for its handset. Batteries should last one to two seasons, depending on usage. Removing the batteries in the off-season will extend the battery life. Should the batteries lose power, the control may be operated by manually turning the control knob at the valve or by turning off the valve at the switch.

To replace the batteries in the remote control receiver, carefully pull the receiver off its Velcro attachments on the cross beam.

Touch Up Paint

If you need to touch up the paint on your cast unit, use the Stove Bright by Forrest 1990 Satin Black spray paint. Please note that it may be necessary to spray the entire cast piece.

Servicing

If any attention is required for your appliance, contact your supplier quoting the model number. It will be helpful if the appliance serial number can also be quoted. This number is on the rating plate, which is attached to the unit. The replacement parts are shown at the end of this manual. Please always quote the part number and description when requesting spare parts.

Remote Control Operation

NOTE: Before using the remote control system for the first time, the receiver and the handset must be synchronized. See the section Initial Remote Control Set-up on page 23 in this manual.

Your fireplace remote control helps you get the comfort, convenience and aesthetics you want from your gas fireplace. The remote controls your fireplace in different ways.

IMPORTANT: BEFORE YOU BEGIN, please note that on this system, the settings of time, temperature and automatic ON/OFF can only be programmed when the function display is flashing. Be patient when programming as it can take a few seconds to set.

WARNING: When the pilot is lit, the valve motor turns automatically to maximum flame height.

1. Make sure that the MAN knob on the valve is in ON position.
2. Make sure that the switch on the valve is in the I position.
3. Press and hold the OFF and large flame (large flame) buttons until you hear a short acoustic signal. Release the buttons.

The acoustic signals will continue until the pilot lights. The remote control will go automatically into TEMP mode. The flame will be at maximum height until the remote control reads the temperature (factory set) and will then adjust the flame accordingly.

You can put the remote in MAN manual mode, change the temperature in TEMP mode or program your remote in TIMER mode as indicated in the following sections.

Turning Your Fireplace ON

1. Press the (small flame) button to reduce the flame to pilot.
2. Press the OFF button to turn the pilot off.

Alternately, you can press the O button on the switch if you won’t use your fireplace for a long period of time, if you cannot locate your remote control handset or if you wish to change the batteries.
Owner’s Information

Operation Modes

STANDBY MODE—Ignited pilot only.

MAN MODE—Manual Mode. You can use this mode to adjust the flame height up or down.

☼ TEMP MODE—Daytime Temperature Mode (appliance must be in Standby mode; pilot ignited): The room temperature is measured and compared to the set temperature. The flame height is then automatically adjusted to achieve the Daytime set temperature.

☽ TEMP MODE—Nighttime Setback Temperature Mode (appliance must be in Standby mode, pilot ignited): The room temperature is measured and compared to the Nighttime Setback temperature. The flame height is then automatically adjusted to achieve the Nighttime Setback temperature.

TIMER MODE—(appliance must be in Standby mode, pilot ignited): The Timer setting allows you to set two burner ON times and two burner OFF times for every 24-hour period.

Changing the Mode of Operation

Briefly pressing the SET button changes the mode of operation in the following order:

MAN → ☼ TEMP → ☽ TEMP → TIMER → and back to MAN

NOTE: MAN mode can also be reached by pressing either the button or button.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Sun ☼</th>
<th>Moon ☽</th>
</tr>
</thead>
<tbody>
<tr>
<td>TEMP</td>
<td>Daytime temperature setting</td>
<td>Nighttime temperature setting</td>
</tr>
<tr>
<td>TIMER</td>
<td>Start time setting</td>
<td>Stop time setting</td>
</tr>
</tbody>
</table>

Flame Height

The flame height can be adjusted in the following manners. In STANDBY mode,

1. Press the (large flame) button to turn on the main burner.
2. Press the (large flame) button to increase the flame height.
3. Press the (small flame) button to decrease the flame height or to go to pilot Standby position.

For fine adjustments, tap the and buttons.

Quick Flame Adjustment

If or are pressed for 0.5 sec., the flame will increase to maximum or decrease to the pilot Standby position.

NOTE: While pressing either button, a symbol indicating transmission appears on the upper right hand corner of the display. The receiver confirms transmission with an acoustic signal.

Time

To set the time, follow the steps below.

1. The display indicates °C/24-hour or °F/12-hour clock. To change from one to the other, press and hold both the OFF and buttons until the display changes.
2. To set the time, hold down both the and buttons until the display flashes. Let go.
3. Quickly press the button to set the hour and the button to set the minutes.
   Note: You must start setting the time while the display is flashing. If it stops flashing, go back to 2.
4. Press the OFF button to return to manual mode or simply wait and it will automatically return to Manual mode.
Owner's Information

Temperature

Use this setting when you come in and want to enjoy a set temperature.

1. Select either the ☀ TEMP MODE or the ☼ TEMP MODE by briefly pressing the SET button.
2. Hold the SET button until the TEMP display flashes.
3. Set the desired temperature with the ▲ or the ▼ buttons.
   Note: 4.5°C/40°F is the minimum temperature setting.
4. Press the OFF button or simply wait and the display will go to the temperature control mode.
   Note: If you would like the Nighttime Setback temperature control to turn off, decrease the ☼ TEMP MODE setting until [---] appears on the display.
   Your fireplace will reach the set temperatures and the remote handset will check the temperature every five minutes, adjusting the amount of fuel needed to give you a steady, even heat.
5. The display must remain in TEMP mode on the remote handset.

Timer

It is possible to program two periods of time per day at which your fireplace will turn on and off automatically.

For example, you can set your fireplace to turn on in the morning just before you get up (P1 ☀ [start time]) and to turn off when you leave for the day (P1 ☼ [stop time]). Then, you can set your fireplace to turn on again at the end of the day (P2 ☀ [start time]) and to turn off when you go to bed at night (P2 ☼ [stop time]).

If you wish to set only one time period at which your fireplace will turn on and off, program P2 ☀ [start time] and P2 ☼ [stop time] for the same time as P1 ☼ [stop time].

1. Select TIMER mode by briefly pressing the SET button.
2. Press and hold the SET button until TIMER is displayed on the lower right hand side.
3. Press and hold the SET button until P1 ☀ and the time display flashes. Set the start time by pressing the ▲ button for the hour and the ▼ button for the minutes. Then, briefly press SET to P1 ☼ and set the stop time in the same manner you just set P1 ☼.
4. Briefly press the SET button again for the next burner cycle time, which will be P2 ☀ and P2 ☼.
5. Once all four times are set, press OFF or simply wait to complete programming.
6. The remote handset must remain in TIMER mode to function automatically.

Low Battery Indication

Remote handset: BATT will appear on the display when the battery needs to be replaced. Replace with one 9 V battery (alkaline recommended).
Receiver: Three short ‘beeps’ will sound when the motor turns when the batteries need to be replaced. Replace with four 1.5 V batteries (alkaline recommended).
NOTE: With very low battery, the valve shuts off the fire completely. This does not happen when the power supply is interrupted.

Poor Reception

If the reception is poor, remove the tape from the antenna on the receiver and stretch the antenna toward an open area. This should improve reception.

Handset / Receiver Match

The remote control handset and receiver are programmed to function together. In case of a replacement of the handset or the receiver, you will need to reset the receiver to handset to allow them to function together. Contact your dealer for details

Automatic Standby Mode

If there is no transmission from the handset to the receiver within a 6-hour period, the appliance will go to STANDBY (pilot) mode.
Owner’s Information

Manual ON/OFF Switch

In cases where you want to turn off your fireplace and cannot do it with the remote control handset (misplaced, lost, dead batteries, etc.), you can turn off the appliance with the manual switch located on the right hand side of the valve. Simply reach under the front and activate the switch.
Lighting Instructions

FOR YOUR SAFETY, READ BEFORE LIGHTING

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This appliance has a pilot which must be lighted by hand or by remote control. Follow these instructions exactly. To save gas, turn the pilot off when not using the appliance for a prolonged period of time.

B. BEFORE LIGHTING, smell all around the appliance area for gas. Be sure to smell next to the floor because some gases are heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS
- Do not try to light any appliance.
- Do not touch any electric switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to push in or turn the control knobs. Never use tools. If the knobs will not push in or turn by hand, don’t try to repair them; call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control, which has been under water.

LIGHTING INSTRUCTIONS

1. STOP! Read the safety information above.

2. SET ON/OFF SWITCH (1) TO “OFF” POSITION.
   - Wait five (5) minutes to clear out any gas, then smell for gas, including near the floor. If you smell gas, STOP! Follow “B” in the safety information above on this label. If you don’t smell gas, go to the next step.

3. AUTOMATIC IGNITION (Fig. 1): Locate the pilot (Fig. 3.) inside of firebox at left hand side.
   - ON/OFF switch (1) in ON position, MAN-knob (2) in ON position; set Flame Adjustment knob (3) to lowest setting (☉).
   - On the remote control handset, press the OFF button (red dot) and large flame button (襻) simultaneously; a short acoustic signal confirms the start has begun.
   - Further short acoustic signals indicate the ignition process is in progress.
   - When the pilot is lit, the Flame Adjustment knob (3) will automatically rotate to the highest setting.
   - Press the small flame button (襻) on the remote control handset to reduce the flame height.

4. MANUAL IGNITION (Fig. 2): With the window off, locate the pilot (Fig. 3) inside of firebox at left hand side.
   - ON/OFF switch (1) in ON position, MAN-knob (2) in MAN position.
   - Set Flame Adjustment knob (3) to the lowest setting (☉).
   - Push down the metallic core (4) with a pen or similar instrument; this will establish the pilot gas flow.
   - Light gas at the pilot (5) with a match.
   - Continue holding down metal core (4) for about 10 seconds; after release, pilot should remain lit.
   - If the pilot will not stay lit after several tries, turn the gas control knob (3) to OFF (☉) and call your local service technician or gas supplier.
   - Reinstall the window and set the MAN-knob (2) to ON; turn Flame Adjustment knob (3) up (☉) or down (☉) manually or use the flame buttons (襻)(襻) buttons on the remote control handset to adjust the flame height.

TO TURN OFF GAS TO APPLIANCE

1. AUTOMATIC SHUT-OFF (using the remote control handset):
   - Press and hold the small flame button (襻) on the remote control handset to shut-off the main burner gas flow.
   - Press OFF button on remote handset to shut-off the appliance, including pilot flame.

2. MANUAL SHUT-OFF (using only the ON/OFF switch (1) located to the right hand side of the valve):
   - Press O the ON/OFF switch (1) to shut-off the appliance, including pilot flame.

**Notes:**
1) Simpson Dura-Vent co-axial pipes and fittings require Valor 817VAK Starter Adapter to fit Valor’s smooth collars. All other above manufacturers’ collars will fit directly to Simpson Dura-Vent or Valor’s smooth collars.
2) Follow instructions supplied with each manufacturer’s components.
3) Unless otherwise specified, all the parts and assemblies from the above table are to be used with 4” x 6-5/8” pipes.
4) Termination caps manufactured by RLH Industries are from Homestyle Chimney Collection and can be ordered in one of the following finishes: a) aluminium; b) black powder coated; c) solid copper.
Warranty

If you have a problem with this unit, please contact your dealer or supplier immediately. Under no circumstances should you attempt to service the unit in any way by yourself. The warranties in paragraphs 1 and 2 are provided only to the first purchaser/user of this unit, are not transferable and are subject to the conditions and limitations in paragraphs 3, 4 and 5. Please review the conditions and limitations carefully and strictly follow their requirements.

1. Extended Warranty Coverage

For a period of up to ten (10) years, Miles Industries Ltd., (the “Company”) or its appointed distributor will at its option pay the initial purchaser for the repair of, or will exchange the following parts or components which are found to be defective in material or workmanship under normal conditions of use and service:

<table>
<thead>
<tr>
<th>Part or Component</th>
<th>Defect Covered</th>
<th>Maximum Warranty Period</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exterior steel casing</td>
<td>Corrosion</td>
<td>10 years</td>
</tr>

</tr>
<tr>
<td>Cast iron parts</td>
<td>Corrosion</td>
<td>10 years</td>
</tr>
<tr>
<td>Firebox and heat exchanger</td>
<td>Corrosion (but not discoloration) causing loss of structural integrity</td>
<td>10 years</td>
</tr>
</tbody>
</table>

2. Two-Year Parts Warranty

In addition, for two (2) years from the date of purchase, the Company, at its option, can repair or exchange all parts and components not listed above but that are found to have a *bona fide* defect in material or workmanship under normal conditions of use.

3. Conditions and Limitations

a) The warranty registration card must be completed by the initial owner and returned to the Company within 90 days of purchase.

b) Installation and maintenance must be performed by an authorized and trained dealer in accordance with the Company’s installation instructions.

c) This warranty is void where installation of the unit does not conform to all applicable codes including national and local gas appliance installation codes and building and fire codes.

d) The owner must comply with all operating instructions.

e) The Company is not responsible for the labor costs to remove defective parts or re-install repaired or replacement parts.

f) The first purchaser or user of the unit will be responsible for any shipping charges for replacement parts as well as travel time incurred by the dealer to perform the warranty work.

g) This warranty applies to non-commercial use and service and is void if it is apparent that there is abuse, misuse, alteration, improper installation, accident or lack of maintenance to the unit.

h) This warranty does not cover damage to the unit through:
   i) Improper installation, operational or environmental conditions.
   ii) Inadequate ventilation in the area or competition for air from other household equipment or appliances.
   iii) Damage due to chemicals, dampness, condensation, or sulphur in the fuel supply lines which exceeds industry standards.

i) This warranty does not cover glass, log breakage or damage to the unit while in transit.

j) The Company does not allow anyone to extend, alter or modify this warranty and assumes no responsibility for direct, indirect or consequential damages caused by the unit. State or provincial laws where the first purchaser or user resides may provide specific rights to extend this warranty and, if so, the Company’s sole obligation under this warranty is to provide labor and/or materials in accordance with those laws.

4. Discharge of Liability

After two (2) years from the date of purchase, the Company may, at its option, fully discharge all obligations under this warranty by paying to the first purchaser/user the wholesale price of any defective parts.

5. No Other Warranty

All obligations to repair this unit are defined in this warranty. Some states or provinces may specifically mandate additional warranties on the part of manufacturers, but in the absence of such specific legislation, there is no other warranty or obligation expressed or implied.
