

WHAT TO LOOK FOR IN A GAS FIREPLACE

MANY OTHER GAS FIREPLACES

No significant heat

As a decorative fireplace, many gas fireplaces don't provide a significant amount of heat.

Convective heat with a fan

Fireplaces often depend on electric fans to convect heat. But electric fans can be noisy and won't work in the event of a power outage.

Regular steel burner

Steel burners may rust and fail under regular use.

Require electricity to run

Built-in fans and electronic ignitions require electricity to run.

Tempered Glass

Tempered glass alone cannot handle extreme heat.

Steel and Paint

Steel fireplaces can rust and break down. Low-cost wet paint can chip and fade.

Logs for decoration

Logs are created for aesthetics only, and don't function as a heat source.

Adjustable heat

Turn fireplace on and off, and the flame up and down with a switch that is often in an awkward spot.

Efficiency

Don't meet the minimum standards for a heater-rated fireplace.

Safety

Required to pass CSA testing.

Heater-rated

We're rated with space heaters so we put Radiant Heat Technology into every fire. You can feel it.

Convective heat without a fan

Our exclusive Secondary Heat Exchanger and our aerodynamic firebox naturally improve convective heat—without a fan. Convective heat complements the radiant heat of our fireplaces.

Stainless Steel burner

Our precision stainless steel burners don't rust, and create an enhanced flame and ember glow that produces radiant heat.

No power. No problem.

Valor fireplaces heat without electricity—even in a power failure—and save you money on your electricity bill.

Ceramic glass

Valor's durable and robust ceramic glass improves radiant performance by absorbing and distributing radiant heat.

Aluminized steel and powder-coated paint

Built to last, our aluminized steel fireboxes handle high temperatures, delivering efficient radiant warmth. Our baked-on powder-coated paint offers a better texture and a more durable finish.

Logs for aesthetics and heat

High definition, low mass fiber ceramic logs heat up and glow quickly. We harness the radiating warmth from our logs, just like real logs.

Remote control

Every Valor comes with a remote control. You can adjust and program the flame for constant, even warmth without having to cycle the fire on and off.

Efficiency

All Valor fireplaces are heater-rated. And, Valor Radiant Zone Heating is up to 25% more efficient than central forced air systems.

Safety

We put our fires through rigorous safety testing in our in-house CSA approved lab.
